A winter storm moving out of the Rockies into the central plains brought heavy snow to southwestern and much of central North Dakota March 30th and 31st. Anywhere from 5 inches up to a foot of snow was observed. As low pressure continued to lift northeast into the upper Mississippi Valley, strong northerly winds developed across the region, with peak gusts recorded around 55 miles per hour at some locations. Combined with the fresh loose snow and continued falling snow, blizzard conditions were observed.
