<b>MCLEAN COUNTY --- 0.8 NW WASHBURN [47.29, -101.03]</b>				
	07/01/24 16:00 CST	0		Hail (1.00 in)
	07/01/24 16:03 CST	0		Source: Public
<p>Showers and thunderstorms developed as a cold front pushed through North Dakota. Initially, a funnel cloud formed to the east of Minot, in Ward County, along a surface boundary with rain showers and weak thunderstorms. Additional thunderstorms developed with a couple of storms becoming severe over McLean and Oliver counties. The largest hail reported was a half-dollar in size, and occurred at Center in Oliver County.</p>				
<b>WELLS COUNTY --- 3.8 SE CHASELEY [47.40, -99.75], 4.2 SE CHASELEY [47.40, -99.75]</b>				
	07/04/24 11:12 CST	0		Tornado (EF0, L: 0.36 mi , W: 50 yd)
	07/04/24 11:14 CST	0		Source: Public
<p>The tornado touched down in an open field southeast of Chaseley and impacted no structures. There was no damage to evaluate. By National Weather Service policy the tornado is rated EF-U (Unknown).</p> <p>Thunderstorms developed as a broad upper low circulated over North Dakota. One thunderstorm produced a landspout tornado to the southeast of Chaseley, in Wells County. The tornado occurred in an open field and damaged no structures, thus by National Weather Service policy the tornado was rated EF-U (Unknown).</p>

	07/08/24 14:45 CST		0	Funnel Cloud
	07/08/24 14:48 CST		0	Source: Emergency Manager
<p>A deep low pressure system loitered over the Northern Plains and Upper Midwest for multiple days, producing many funnel clouds over western and central North Dakota over a four day period. One funnel touched down, becoming a tornado, in Mountrail County. The touchdown occurred on a farmstead where multiple campers were parked. One camper was rolled, causing significant damage. In addition, a small grain bin had its roof torn off. The tornado then proceeded into an open field before dissipating. Based on the damage done the tornado was rated EF-1, with winds estimated at 90 MPH.</p>				
<b>STUTSMAN COUNTY --- 0.5 W WINDSOR [46.90, -99.04]</b>				
	07/09/24 16:35 CST		15K	Thunderstorm Wind (EG 65 kt)

Thunderstorms developed initially over western North Dakota during the afternoon and early evening hours before also forming over central North Dakota later in the evening. This as an upper level short wave trough approached the area and a frontal boundary moved in from Montana. The first storm to develop was over Dunn County and quickly produced a tornado. The tornado occurred over an open field south of Manning and impacted no structures. There was no damage to evaluate, therefore it was rated EF-U (Unknown) by NWS policy. Thereafter, the main threat with the thunderstorms was large hail. The largest reported hail was the size of a baseball, and also occurred in Dunn County. There were also reports of severe wind gusts, particularly towards the end of the event with the later storms. With that said, the strongest wind gust did occur during the middle of the event near Plaza, Mountrail County, where estimated 75 mph wind gusts cause tree damage.

<b>BOWMAN COUNTY --- 14.6 W RHAME [46.19, -103.95]</b>

<p>Wind-driven very large hail caused extensive damage. On two houses, multiple windows were taken out with the siding completely destroyed. All vehicles were dented. In addition, crops throughout the area were destroyed.</p> <p>A round of upper level short wave troughs passed from eastern Montana and Saskatchewan into North Dakota during the late afternoon and early evening hours. This led to thunderstorm development in an environment of strong deep layer shear and elevated instability, with multiple supercells occurring. These storms produced very large hail and damaging wind gusts as the storms spread to the southeast. Two storms produced significant damage. The first one produced wind gusts of 80 mph to the northeast of Drake, McHenry County, which combined with ping pong ball size hail to cause extensive damage to crops and property. The second occurred to the south-southeast of Cleveland in which 3.5 inch diameter hail combined with high winds to severely damage two houses and crops in the area.</p>

Thunderstorms initially formed in the late afternoon in the vicinity of a surface boundary over southwest North Dakota, with additional storms then forming through the late afternoon into the evening in an environment of elevated instability and deep layer shear. Many storms became supercells, producing very large hail. Over the Bismarck-Mandan area, three separate storms produced large hail. The first storm passed through the Harmon Lake area before crossing the Missouri River and passing through the north side of Bismarck, causing extensive damage with hail up to 3 inches in diameter. As that storm moved along, a second storm formed to the south of Mandan and quickly intensified as it crossed the Missouri River and passed over developments to the south of Bismarck and over the Lincoln area. Many locations experienced two inch diameter hail with this storm, which increased to baseball size over Lincoln. One mile south of Lincoln, a hailstone was measured at 4.5 inches. These two storms caused extensive damage to structures and vehicles, resulting in millions of dollars in damage. A third severe storm then formed over Bismarck, but this storm was weaker, producing one-inch diameter hail. Additional thunderstorms then continued over central North Dakota with the main threat shifting towards strong winds late in the event. The strongest wind gust was estimated at 75 mph at McKenna Lake, near Napoleon, Logan County, where four campers were blown over.
