

A MESSAGE TO YOU

On behalf of all four National Weather Service (NWS) offices that serve you in Alabama, thanks for taking time to both educate yourself and develop an action plan NOW, before hazardous weather strikes. We at the NWS take our role of providing life saving information very seriously. However, our best forecasts and warnings mean nothing if YOU don't do something with this information. So, please join us. Learn about the threats. Learn how to receive the hazardous weather information. Finally, develop a plan to protect yourself and others before hazardous weather strikes. The life you save may be your own!
