

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
ALABAMA, Central				
(AL-Z015) WALKER, (AL-Z017) BLOUNT, (AL-Z018) ETOWAH, (AL-Z019) CALHOUN, (AL-Z021) CLEBURNE, (AL-Z022) PICKENS, (AL-Z023) TUSCALOOSA, (AL-Z024) JEFFERSON, (AL-Z025) SHELBY, (AL-Z026) ST. CLAIR, (AL-Z027) TALLADEGA, (AL-Z034) BIBB, (AL-Z045) MACON, (AL-Z046) BULLOCK, (AL-Z048) RUSSELL, (AL-Z049) PIKE, (AL-Z050) BARBOUR				
	02/01/18 00:00 CST		0	Drought
	02/13/18 12:00 CST		0	
Much above normal rainfall during the first half of the month of February erased rainfall deficits across all of Central Alabama and brought all counties below Severe Drought (D2) status.				
SUMTER COUNTY --- 1.8 NNE BOYD [32.64, -88.30]				
	02/07/18 05:08 CST		0	Thunderstorm Wind (EG 50 kt)
	02/07/18 05:09 CST		0	Source: Emergency Manager
Convenience store lost part of its roof and shingles reported blown off a nearby home.				
SUMTER COUNTY --- 0.3 WSW SILOAM [32.43, -88.28], 1.7 E SILOAM [32.43, -88.24]				
	02/07/18 05:11 CST		0	Tornado (EF0, L: 1.97 mi , W: 150 yd)
	02/07/18 05:14 CST		0	Source: NWS Storm Survey
The National Weather Service surveyed damage near Siloam in southern Sumter County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado started on the east side of a private lake south of Buck Creek where it uprooted two trees, one causing minor damage to a lake house roof. The tornado continued east into a forested area near Buck Creek where it uprooted several more trees. The tornado continued east toward a convenience store at the intersection of County Road 9 and Highway 17. It caused heavy roof damage to the south side of a house and tore two pieces of sheet metal off of the convenience store. The tornado continued east through a densely forested area and tree damage was found further east along a portion of Walker Road between Highway 17 and U.S. Highway 80. The tornado likely dissipated just to the east of this point.				
MARENGO COUNTY --- 2.6 NNW OLD SPRING HILL [32.46, -87.79], 3.1 NW FAUNSDALE [32.48, -87.62]				
	02/07/18 05:44 CST		0	Tornado (EF1, L: 10.07 mi , W: 1100 yd)
	02/07/18 05:57 CST		0	Source: NWS Storm Survey
The National Weather Service surveyed damage in northern Marengo County and determined the damage was consistent with an EF1 tornado, with maximum sustained winds near 100 mph. The tornado began near the intersection of U.S. Highway 43 and County Road 54 where damage to cedar trees was observed. The tornado continued east through a heavily forested area and crossed French Creek. Tree damage was observed along County Road 1. The tornado moved further east crossing Alabama Highway 69 where, on the north side, a large tree crushed the south side of a single wide mobile home. Further south, on the south side of the path, near Windsor Drive and Alabama Highway 69, a large farm equipment building lost its roof and walls while wooden supports remained intact. Two mobile homes nearby sustained minor damage to their roofs and siding on the south side. A recreational camper was blown over and crushed a vehicle. Trees were uprooted and split in the vicinity. The tornado pushed east, paralleling Windsor Drive, and caused additional damage to trees that were either uprooted or split. The damage peaked where a single wide mobile home was lofted and blown to the northeast about 30 feet from its original position. The mobile home was less than a year old but appeared to lack any substantial anchoring system. The walls and roof were completely torn away from the floor base and nearly all of the contents were deposited downwind. This appears to be the climax of the tornado's intensity, and winds were estimated to be near 100 mph. To the south of the mobile home's original position was a metal barn that collapsed and destroyed. The tornado made a slight turn to the northeast where it caused damage to an agricultural crop sprinkler system and snapped a power pole along Allenville Road. It then crossed U.S. Highway 80 and damaged two road signs and caused timber damage. The tornado continued northeast and crossed into Hale County near Cottonwood Creek.				
BIBB COUNTY --- 0.3 WSW BIBB MILL [32.95, -86.92], 0.4 ENE BIBB MILL [32.95, -86.91]				
	02/07/18 05:51 CST		0	Tornado (EF0, L: 0.67 mi , W: 50 yd)
	02/07/18 05:52 CST		0	Source: NWS Storm Survey
The National Weather Service surveyed damage in southeast Bibb County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 65 mph. The tornado touched down just to the west of Shady Grove Road just north of the Randolph Community. About 20-30 trees were either snapped or uprooted. Roof damage occurred to one home on Shady Grove Loop when a tree fell on it. Another home had a few shingles removed on Alabama Highway 139. The tornado dissipated just to the east of Highway 139.				
HALE COUNTY --- 4.9 ESE GALLION [32.48, -87.62], 5.9 S SLEDGE [32.49, -87.60]				
	02/07/18 05:57 CST		0	Tornado (EF0, L: 1.36 mi , W: 455 yd)
	02/07/18 05:58 CST		0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
The National Weather Service surveyed damage in southeast Hale County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 65 mph. This tornado was a continuation of a tornado that began near Highway 43 in Marengo County. The tornado crossed into Hale County near Cottonwood Creek and was in a dissipation phase, only producing some minor damage to trees before it dissipated near County Road 25.				
CHILTON COUNTY --- 2.1 WNW JEMISON [32.96, -86.78], 1.1 NNE JEMISON [32.96, -86.74]				
	02/07/18 06:03 CST	0		Tornado (EF0, L: 2.49 mi , W: 300 yd)
	02/07/18 06:06 CST	0		Source: NWS Storm Survey

The National Weather Service surveyed damage in northern Chilton County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado began near the intersection of County Road 25 and County Road 42, about 2 miles west of the city of Jemison, and traveled east along County Road 42. Damage was minimal at first and confined to downed limbs and a loss of metal roofing and shingles on a few structures. The tornado quickly intensified and grew wider near the intersection of County Road 42 and County Road 38, where numerous structures sustained damage. The St. James Highland Bible Church lost a significant portion of its metal roof and wooden trusses. The roof did not appear to be particularly well constructed, and the damage was consistent with winds near 80 mph. Supporting evidence for the classification of a tornado was quite strong in this location, and debris from the church was thrown northward across the path of the tornado. Several homes near this location also sustained a loss of shingles and other roof covering materials. The tornado weakened somewhat as it moved towards downtown Jemison, where falling trees caused significant damage to mobile homes near the intersection of Patton Street and Hotel Street. As the tornado moved just east of U.S. Highway 31, damage was relatively minor and limited to carports, shingles, and a few uprooted trees. The tornado dissipated about one quarter mile east of U.S. Highway 31 near Chilton Circle.

AUTAUGA COUNTY --- 2.1 N INDEPENDENCE [32.56, -86.72], 2.0 W JOFFRE [32.57, -86.68]				
	02/07/18 07:04 CST	0		Tornado (EF0, L: 1.97 mi , W: 150 yd)
	02/07/18 07:08 CST	0		Source: NWS Storm Survey

The National Weather Service surveyed damage in central Autauga County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 70 mph. The tornado touched down just to the west of County Road 79 in rural Autauga County and moved eastward towards County Road 19. Numerous trees were snapped and uprooted along the path. The damage path widened just to the west of County Road 19. A single family home sustained minor siding damage and several trees were snapped and uprooted around the home. Splattering of debris was noted on two sides of the home. The tornado dissipated near County Road 19.

MARENGO COUNTY --- 0.8 SW NICHOLSVILLE [32.01, -87.91], 0.8 SSE NICHOLSVILLE [32.01, -87.90]				
	02/07/18 07:16 CST	0		Tornado (EF0, L: 0.78 mi , W: 100 yd)
	02/07/18 07:18 CST	0		Source: NWS Storm Survey

The National Weather Service surveyed damage in extreme southern Marengo County near the town of Nicholville and determined the damage was consistent with an EF0 tornado, with maximum sustained winds near 60 mph. The tornado touched down in the Nicholville Community just to the northwest of Crystal Lane. Several trees were uprooted or snapped as the tornado crossed Crystal Lane. A barn then sustained significant roof damage, where pieces of the metal roof were thrown about. Additional trees were snapped and uprooted as the tornado crossed County Road 87 and Nicholville Road. The most significant damage occurred along Nicholville Road where a portable metal carport was turned upside down, and two large pine trees were snapped. A large barn sustained significant roof damage very close to where the pine trees were snapped. Pieces of the metal roof were thrown at least 100 yards across a field to the east of the barn. A few trees were snapped or had a few large limbs broken off across the field east of Nicholville Road. The estimated ending point of the tornado was at this location, as no further damage was found to the east.

LEE COUNTY --- 0.6 E POWLEDGE [32.63, -85.14]				
	02/07/18 09:15 CST	0		Hail (1.25 in)
	02/07/18 09:15 CST	0		Source: Broadcast Media

A line of thunderstorms moved across Central Alabama during the early morning hours of Wednesday, February 7, 2018. Supercells embedded within the line were responsible for producing large hail, damaging winds, and several tornadoes. Severe weather was not anticipated as most model guidance indicated insufficient instability and wind shear for the development of supercells, tornadoes and other severe convective hazards. Even so, a marginal risk was highlighted for the western and southern portions of Central Alabama. The storms exhibited organization and frequent lightning, indicators that instability was likely higher than expected. The radar signatures were marginal at best and therefore, only a few Severe Thunderstorm Warnings were issued during the event.

ALABAMA, North

LAUDERDALE COUNTY --- 1.7 W JACKSONBURG [34.88, -87.70]

Estimate of 14 inches of water flowing over Hwy 65 at MM11 near Mt. Nebo Baptist Church.				

Widespread heavy rainfall impacted the area from February 28th through the 1st of March, with lingering flooding conditions lasting the better part of 7 days. Rainfall totals of 4 to 6 inches fell across much of the area, leading to areal and river flooding. All of the WFO Huntsville HSA river forecast points had some type of product out for them during this event. To date, that's only happened one or two other times in the office's history.

CULLMAN COUNTY --- 1.4 WSW COUNTY LINE [34.29, -86.72], 0.5 NW COUNTY LINE [34.31, -86.71]				
	02/28/18 16:46 CST		0	Tornado (EF0, L: 1.34 mi , W: 100 yd)
	02/28/18 16:48 CST		0	Source: NWS Storm Survey
The tornado first touched down along CR 1526. Here several trees had damage including large limbs snapped and a few small trees were uprooted. A home sustained shingle and gutter damage in this area.				

The tornado moved northeast crossing CR 1527. Here some shallow rooted trees were pushed over with others having limbs snapped. The tornado reached a maximum intensity of around 75 mph as it crossed CR 1542. A rather large barn sustained significant roof damage. A nearby home had its porch damaged when the roof sustained partial uplift and movement.

Another barn in an adjacent field also sustained substantial damage with most of the roof being pulled off and damage to at least one supporting side. The tornado lifted in a field just south of Pentecost Road.

A series of mini-supercells with little or no lightning developed during the late afternoon hours across portions of northwest and north central Alabama south of the Tennessee River. One of these produced a brief tornado in Cullman County.

ALABAMA, Southeast

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/11/18 03:42 CST		0	Tornado (EF0, L: 2.81 mi , W: 25 yd)
	02/11/18 03:48 CST		0	Source: NWS Storm Survey

A tornado touched down in northwest Jackson county and briefly moved into far southern Houston county. Structural damage was minimal with minor roof damage in Graceville in Jackson county. There was no reported structural damage in Houston county as the tornado tracked through a forested area. Trees were also blown down along the track with a dual-pol tornadic debris signature observed on radar in far southern Houston county due to tree debris. This tornado was rated EF0 with max winds estimated at 65 mph based on the observed damage.

HOUSTON COUNTY --- PANSEY [31.15, -85.17]

Suggs Road was completely closed due to flooding from a long duration of moderate to occasionally heavy rain. This road is near a small creek that likely overflowed.

For the first time since January 2017, an event including both flooding and tornadoes impacted our area starting on February 11, 2018. Two tornadoes touched down across inland portions of the Florida Panhandle before sunrise, followed by persistent heavy rainfall that resulted in flooding at several river sites. One of the tornadoes clipped far southern Houston county. As an upper level trough dug southward across the western and central U.S., southerly flow drew moisture from the Gulf of Mexico northward into the tri-state area over the weekend. Upper air soundings measured this increased moisture with precipitable water values around 1.5 inches on Sunday, well above the 90th percentile and a record for the 12z February 11 sounding, although the record for that date and time are below the average max for this time of year. With a cold front and upper level trough west of the area, the persistent deep layer moisture helped to create a favorable set-up for high rainfall amounts. This wet pattern resulted in copious amounts of rainfall across the tri-state region. The highest rainfall amounts were across the Florida Panhandle where 8 to 10 inches fell with localized areas receiving more than 10 inches across coastal Walton and Bay counties. The highest observed rainfall total was in Walton County, where a 48-hour rainfall total of 11.45 inches was recorded. Across southeast Alabama and portions of southwest Georgia, widespread 6 to 8 inches of rain fell. While one Flash Flood Warning was issued, the majority of the impacts from this event were from moderate rainfall rates over a prolonged period of time as convection trained across the tri-state area. These high rainfall totals resulted in numerous road closures across the Florida Panhandle from water covered roads and washed out roadways. In addition, a few roads were closed across southeast Alabama.

ALABAMA, Southwest

WASHINGTON COUNTY --- 5.3 NNE YELLOW PINE [31.47, -88.38], 5.5 NNE YELLOW PINE [31.47, -88.38]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/10/18 17:18 CST		10K	Tornado (EF0, L: 0.17 mi , W: 100 yd)
	02/10/18 17:19 CST		0	Source: NWS Storm Survey

A brief EF-0 tornado touched down just south of Hwy 56 and east of Flat Branch Road. The tornado resulted in damage to the metal roof of a residence along with one window blown out. Scattered softwood tree damage was noted along the short path.

A brief, weak tornado touched down near Chatom and caused minor damage.

ALASKA, Southeast

(AK-Z023) CAPE DECISION TO SALISBURY SOUND COASTAL AREA, (AK-Z026) INNER CHANNELS FROM KUPREANOF ISLAND TO ETOLIN ISLAND, (AK-Z028) SOUTHERN INNER CHANNELS, (AK-Z029) MISTY FJORDS

02/01/18 18:00 AKST	0	Winter Storm
02/03/18 00:00 AKST	0	

On the first day of February, a strong area of frontogenesis developed with the front moving north into the southern panhandle. N-NE-E outflow wind will kept temperatures cold enough on the north side of the front to allow snow to get up to southern Admiralty Island. Increases in 850mb temps above freezing late Thursday night into Friday morning made the rain/snow line critical and difficult to forecast. Significant snowfall occurred for Port Alexander, Petersburg, Wrangell, Point Baker and Coffman Cove. Ketchikan had wintry mix. No damage was reports and the impact was snow removal.

Some places could have had blizzard conditions with this event due to strong outflow. Port Alex had gusts of around 40kt during bands of snow. Highest snow falls extended a little farther south than expected. Petersburg, to Whale Pass to Thorne Bay, and Coffman Cove got buried. lighter amounts elsewhere. Snow changed to rain early in Ketchikan and overnight at Kasaan limited snow amounts to 1 to 2 inches there. Hyder still snowing as of 11 am 2/2 with ~7 inches accumulated so far, and up to 9.3 inches as of 730 pm. Unknown about Port Alexander and Kake.

(AK-Z018) TAIYA INLET AND KLONDIKE HIGHWAY, (AK-Z025) JUNEAU BOROUGH AND NORTHERN ADMIRALTY ISLAND

02/02/18 06:15 AKST	0	High Wind (MAX 65 kt)
02/04/18 18:00 AKST	0	

Arctic high pressure built over the Yukon up to 1042 MB by the morning of 2/2. At the same time, a moderate low 998 MB moved to off Sitka Sound resulting in very strong pressure differences across northern SE Alaska through 2/4. Winds to 75 MPH were observed but the damage was minimal. Ferry service for Lynn Canal was disrupted for a few days due to large wind waves and freezing spray.

(AK-Z018) TAIYA INLET AND KLONDIKE HIGHWAY

02/07/18 21:00 AKST	0	High Wind (MAX 55 kt)
02/08/18 16:00 AKST	0	

Another outflow event was characterized by a 1050 MB high over the Yukon and temperatures in the mid -40s over Canada. Strong pressure gradients and moderate cold advection caused high wind gusts at the Skagway marine exchange site. A more glancing blow of cold air as opposed to the last system combined with the lack of strong low pressure to the south limited gusts below 70 mph and also the length of the outflow event. No damage was reported.

(AK-Z025) JUNEAU BOROUGH AND NORTHERN ADMIRALTY ISLAND, (AK-Z026) INNER CHANNELS FROM KUPREANOF ISLAND TO ETOLIN ISLAND

02/12/18 16:00 AKST	0	Heavy Snow
02/13/18 09:00 AKST	0	

On Monday 2/12 and Tuesday morning 2/13 Juneau and Petersburg got hit with a heavy snow storm that was not well forecasted. By Tuesday morning Juneau got 6 to 15 inches of new snow plus some freezing drizzle, and Petersburg got 7 to 8 inches. This was due to deep WSW flow aloft that was expected to rain, but cold air never changed over.

(AK-Z029) MISTY FJORDS

02/13/18 06:47 AKST	0	Winter Storm
02/13/18 15:00 AKST	0	

Post frontal snow showers hammered Hyder on the night of 2/13 into the morning of 2/14. Storm total was 15.3 inches new snow in 24 hours. Impact was snow removal.

(AK-Z026) INNER CHANNELS FROM KUPREANOF ISLAND TO ETOLIN ISLAND

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/22/18 15:00 AKST		0	Winter Storm
	02/23/18 06:07 AKST		0	

A short wave upper trough moved over the Panhandle on the night of 2/22, and the associated front caused heavy snow for the Central Panhandle. Cold air in place closer to the coast mountains will result in heavy snow with a high water content. Most snow was 10 to 1 or less which made heavy snow removal the main impact.

Temperatures in Juneau warmed up into the mid 30s overnight on 2/22 causing Downtown, Lemon Creek, and the airport to change over to rain (with less than an inch of snow accumulation before that). Snow continued in the Mendenhall valley but rates were low enough that only around an inch of accumulation was observed. For Petersburg and Wrangell temperatures also warmed overnight 2/22 but more snow was observed before the change over especially at Petersburg. Wildly varying snow amounts with less than 1 inch at Kake and Wrangell while 5 to 6 inches were observed at 9 mile on the Mitkof highway.

(AK-Z024) EASTERN BARANOF ISLAND AND SOUTHERN ADMIRALTY ISLAND, (AK-Z026) INNER CHANNELS FROM KUPREANOF ISLAND TO ETOLIN ISLAND

02/23/18 13:09 AKST	0	Winter Storm
02/24/18 18:00 AKST	0	

The weather front swept over the central panhandle on 24 February, spreading snow over the cooler air trapped near the surface. An easterly flow pattern ahead of the front/low resulted in some upslope flow to the easterly slopes increasing the snowfall. Temperatures began warming in the afternoon leading to a wetter snowfall in the afternoon and compaction of the snowpack.

(AK-Z017) CAPE FAIRWEATHER TO CAPE SUCKLING COASTAL AREA, (AK-Z019) HAINES BOROUGH AND LYNN CANAL

02/27/18 21:00 AKST	0	Winter Storm
02/28/18 09:00 AKST	0	

A weather front moved across the northern panhandle that spread moisture across the area, with cold air trapped in Lynn Canal. Periods of heavy snow developed along the Haines Road then developed on the Eastern Gulf Coast during the night of 2/27.

(AK-Z025) JUNEAU BOROUGH AND NORTHERN ADMIRALTY ISLAND

02/28/18 23:00 AKST	0	High Wind (MAX 80 kt)
02/28/18 23:59 AKST	0	

A 979 MB gale force low moved onto Vancouver Island on the afternoon of 2/28 with 1035 MB High over the Yukon. This was a setup for a Taku wind event for Downtown Juneau and Douglas. The peak gust was 92 mph from a marine Exchange observation Downtown. No damage was reported.

ALASKA, Southern

(AK-Z161) BRISTOL BAY

02/25/18 23:00 AKST	0.30M	Storm Surge/Tide
02/26/18 17:00 AKST	0	

A 980 mb low pressure system moved onshore near Bethel, Alaska, bringing storm force winds to Bristol Bay. Over 18 hours of northerly winds caused high surf along the northern Alaska Peninsula. The combination of coastal sea ice in this area caused damage to local fishing assets. The damage was not discovered until spring, when the fishing community began to set up their summer camps.

(AK-Z131) NERN P.W. SND

02/28/18 05:20 AKST	0	High Wind (MAX 90 kt)
02/28/18 23:59 AKST	0	

High pressure over the western portion of Alaska combined with a low over the Panhandle to cause a tight gradient over Southcentral. A front passing through the Chugach mountains increased the gap flow to warning level through northerly gaps and into Valdez.

AMERICAN SAMOA

(AS-Z002) TUTUILA

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/09/18 04:00 SST		50M	Tropical Storm
	02/09/18 14:00 SST		2M	

Tropical Cyclone Gita combined with an active monsoon trough generated destructive winds and torrential rainfall between the hours of 4 AM to 2 PM. At the peak of the tropical storm before 8 AM, the Weather Service Office and most of American Samoa loss power. The NOAA Earth System Research Laboratory (ESRL) Office in Matatula recorded 64 kt gust 85 kt, and the radiosonde data reported 59 kt around 6 AM. Tropical Cyclone Gita caused widespread damages to homes, private and personal properties, government facilities, roads, electrical poles and wires, phone lines, and plantations across American Samoa. About 965 people including children evacuated to 12 shelters on the island of Tutuila. Numerous mudslides, flash flooding in small streams and low-lying areas were results of heavy rainfall. Heavy runoff swept debris and water into homes near valleys and small streams area. Several banyan trees and most breadfruit trees were uprooted.

A cargo shipping boat in Manu'a, Uila o le Sami, sank in Ta'u. Another similar incident occurred where an alia boat sank in Fagaitua bay but was later recovered by the owners on the following day. A storm surge up to 2 to 4 feet swept debris over the main road and beach area along the northwest through northeast shores of Tutuila, Aunu'u and Manu'a. There we no fatalities reported.

(AZ-Z502) TOHONO O ODHAM NATION, (AZ-Z503) UPPER SANTA CRUZ RIVER AND ALTAR VALLEYS, (AZ-Z504) TUCSON METRO AREA, (AZ-Z507) UPPER SAN PEDRO RIVER VALLEY, (AZ-Z510) WHITE MOUNTAINS OF GRAHAM AND GREENLEE COUNTIES, (AZ-Z513) DRAGON/MULE/HUACHUCA AND SANTA RITA MOUNTAINS, (AZ-Z515) BABOQUIVARI MOUNTAINS				
	02/01/18 00:00 MST		0	Drought
	02/28/18 23:59 MST		0	

Extreme drought (D3 category), which began in January, continued throughout February across the same sections of southeast Pima County, Santa Cruz County and far southwest Cochise County including portions of the Tohono O'odham Nation and the Baboquivari, Santa Rita and Huachuca Mountains, as well as the White Mountains of far northern Graham and Greenlee Counties.

While most of the area received between 2 and 4 inches of precipitation from one storm system in mid February, overall soil moisture readings only improved slightly, and generally remained ranked below the 20th percentile. Prior to the precipitation event, two human-caused wildfires burned in rural areas. The Altar Fire burned northwest of Sasabe, on Mildred Peak, and consumed 3400 acres. The Knob Hill Fire burned 2900 acres just outside of the extreme drought area near Saint David.

ARKANSAS, Central and North Central

(AR-Z014) STONE, (AR-Z016) INDEPENDENCE				
	02/06/18 19:00 CST		0	Ice Storm
	02/07/18 00:00 CST		0

	02/06/18 20:00 CST		0	Winter Weather
	02/07/18 03:00 CST		0	

Rounds of cold air continued surging toward Arkansas to begin February. On the 6th, readings were at or below freezing in northwest sections of the state, and subfreezing air spread slowly to the southeast. A storm system over the middle of the country provided moisture, and there was a potential for wintry precipitation. The incoming cold air was shallow, with warmer conditions (above freezing) overhead. Any snow or sleet would surely melt aloft, but would likely turn to ice (freezing rain) upon reaching the ground. During the nighttime hours of the 6th and early on the 7th, a Winter Weather Advisory was posted across northern Arkansas, with an Ice Storm Warning and up to a quarter inch of ice in the northeast. For the most part, moisture tended to build over the southern and eastern counties, and stayed out of the north. Any ice in the north was minor and spotty. In the northeast, while there was some ice on trees and power lines (leading to spotty power outages), temperatures did not go much below 32 degrees and roads were generally wet.

Arkansas DOT reported State Highway 236 between Highway 89 and Highway 31 was blocked due to high water.

Later in the month, the focus shifted from ice to areas of heavy rain and some severe weather. A front wobbled across the region from the 20th through the 23rd, and a storm system roared through the middle of the country on the 24th. Forecast models showed there was at least twice the usual moisture for late February. Given a tremendous amount of liquid to wring out of the clouds, and with downpours lasting for several days, flash flooding and eventual river flooding became headlines. Through 600 am CST on the 25th, four to more than ten inches of water was measured in a five day period. At many locations, this was two months of rain in just a few days. Amounts included 10.55 inches at Mount Ida (Montgomery County), 9.82 inches at Hot Springs (Garland County), and 8.83 inches at Little Rock (Pulaski County).

SALINE COUNTY --- 1.6 WSW BENTON SALINE CO ARP [34.56, -92.62], 1.1 SW BENTON SALINE CO ARP [34.56, -92.61], 1.8 SSW BENTON SALINE CO ARP [34.55, -92.62], 2.0 SW BENTON SALINE CO ARP [34.55, -92.62]	02/21/18 10:34 CST		0	Flood (due to Heavy Rain)

Palestine Rd. in Kirby was closed due to high water.

Before the month could end, there was another deluge on the horizon. An active southern stream of the jet drove a storm system toward the region on the 27th. The system triggered the next round of downpours. Rain and isolated thunderstorms arrived during the afternoon and evening of the 27th, and continued through much of the 28th. Two to more than four inches of rain was common in central and southern sections of the state. Forty eight hour rainfall through 600 am CST on March 1st included 4.53 inches at Little Rock (Pulaski County), 4.10 inches at Mount Ida (Montgomery County), 3.42 inches at Pine Bluff (Jefferson County), and 3.02 inches at Hot Springs (Garland County).

ARKANSAS, East

	02/24/18 17:20 CST		0.50M	Tornado (EF1, L: 3.23 mi , W: 75 yd)
	02/24/18 17:24 CST		0	Source: NWS Storm Survey

The tornado started just south of Highway 42 about 5 miles west of the town of Cherry Valley causing damage to two farmsteads. One home on the north side of the state highway suffered the worst damage with a large portion of the roof removed. The tornado then traveled northeast about 3 miles through open fields before taking a single wide trailer off it's foundation. The tornado then lifted shortly after crossing County Road 210 approximately 4 miles northwest of Cherry Valley. Other damage included downed tree limbs and minor damage to a few farm outbuildings and one grain bin. Estimated peak wind was 100 mph.

RANDOLPH COUNTY --- 1.1 WNW POCAHONTAS [36.27, -90.99], 0.9 ENE POCAHONTAS [36.28, -90.96], 1.3 SSE POCAHONTAS [36.25, -90.96], 2.0 SW POCAHONTAS [36.25, -90.99]	02/24/18 18:19 CST		30K	Flash Flood (due to Heavy Rain)
	02/24/18 20:30 CST		0	Source: Public

Several roads across town are under water.

A strong cold front interacted with a very unstable airmass across the Midsouth during the afternoon and evening hours of February 24h. All facets of severe weather occurred.

ARKANSAS, Northwest

(AR-Z002) CARROLL, (AR-Z010) WASHINGTON, (AR-Z011) MADISON, (AR-Z019) CRAWFORD, (AR-Z020) FRANKLIN, (AR-Z029) SEBASTIAN	02/01/18 00:00 CST		0	Drought
	02/27/18 06:00 CST		0	

Severe drought (D2) conditions continued across much of northwestern and west central Arkansas through mid February. An active weather pattern began across the area on February 16th and continued for over a week, resulting in multiple rain events across the region. Several of these events were significant. Due to these late-month rains, total monthly rainfall from six to ten inches occurred across all of northwestern and west central Arkansas. The normal average rainfall for February across this region is around three inches. The excessive rainfall resulted in much improved drought conditions by the end of February.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
SEBASTIAN COUNTY --- 0.5 NNE BEVERLY [35.39, -94.10], 0.6 NE BEVERLY [35.39, -94.09], 0.5 ENE BEVERLY [35.38, -94.09], 0.2 NE BEVERLY [35.38, -94.10]

MADISON COUNTY --- 1.9 WSW COMBS [35.80, -93.86], 2.3 SSW BOSTON [35.80, -93.61], 2.4 WSW REYNOLDS [35.95, -93.64], 2.8 WNW WITTER [35.95, -93.72]				
	02/21/18 12:00 CST		50K	Flash Flood (due to Heavy Rain)
	02/21/18 14:00 CST		0	Source: Emergency Manager

Locally heavy rainfall resulted in flooding that damaged portions of county roads.

Widespread showers and thunderstorms developed across much of northwestern Arkansas on the 20th as a cold front moved through the region. A very moist air mass in place ahead of the cold front promoted the development of heavy rainfall from some of this activity. Widespread two to four inches of rain fell across much of northwestern Arkansas through the morning hours of the 21st, with nearly four inches occurring across portions of Sebastian, Franklin, and Madison Counties. This heavy rainfall resulted in some flash flooding.

BENTON COUNTY --- 3.8 N BELLA VISTA [36.49, -94.23], 2.6 WSW ROGERS MUNI ARPT [36.36, -94.16], 2.9 NNW GLADE [36.41, -93.93], 0.5 NW GATEWAY [36.49, -93.93]				
	02/24/18 03:00 CST		0	Flash Flood (due to Heavy Rain)
	02/24/18 09:30 CST		0	Source: Emergency Manager

Heavy rainfall resulted in the flooding of portions of numerous roads across northern Benton County.

Widespread showers and thunderstorms to the north of a stalled frontal boundary produced locally heavy rainfall across much of northwestern Arkansas on the 23rd and 24th. Portions of Benton County received between 2.5 and 5 inches of rain, which resulted in some flash flooding.

ARKANSAS, Southeast

CHICOT COUNTY --- 0.9 SW BELLAIRE [33.49, -91.38], 3.0 W MACON LAKE [33.43, -91.37], 0.2 E GAINES [33.47, -91.25], 3.8 NNW DEWEY [33.53, -91.28]

A cold front moved southeast across Northeast Texas, Southwest Arkansas, and Northern Louisiana during early morning hours of February 6th. Meanwhile, overrunning increased during the daytime hours which led to the development of scattered showers behind the front, which developed into embedded thunderstorms as upper level disturbances shifted northeast across the area enhancing large scale lift, ahead of an upper level shortwave trough which moved into the Southern Plains during the afternoon from the Four Corners region. Steep lapse rates ahead of this shortwave trough contributed to elevated instability aloft, with deep layer shear also adequate enough for some organized post-frontal thunderstorms within a cool air mass with surface temperatures in the lower 50s. As a result, a few of these storms became severe, producing numerous reports of small and large hail across portions of Northeast Texas and Southwest Arkansas during the afternoon hours. The strong to severe thunderstorms diminished by early evening as the post-frontal rains became more widespread across the area, thus diminishing the elevated instability.

(AR-Z050) SEVIER, (AR-Z051) HOWARD, (AR-Z059) LITTLE RIVER, (AR-Z060) HEMPSTEAD, (AR-Z070) MILLER, (AR-Z071) LAFAYETTE

HOWARD COUNTY --- 0.8 SW ATHENS [34.31, -93.98]

	02/20/18 17:45 CST		0	Thunderstorm Wind (EG 52 kt)
	02/20/18 17:45 CST		0	Source: Emergency Manager

Strong thunderstorm winds damaged 4 hog buildings, removed the roof off of 3 chicken houses, and debris knocked the windows out of one vehicle north of Dierks near the Athens community.

A cold front began to shift southeast across extreme Southeast Oklahoma and adjacent sections of Southwest Arkansas during the afternoon hours on February 20th, replacing a very warm and humid air mass with cooler and drier air. Areas of showers and a few embedded thunderstorms developed along and behind the front, as strong overrunning had begun as warmer air surged atop the cooler but shallow air mass behind the front. Enough elevated instability was present to allow for isolated strong to severe thunderstorms to develop along the front during the late afternoon across Northern Sevier and Howard Counties in Southwest Arkansas, before they quickly exited the area and weakened. These storms produced strong winds which downed a few trees near Horatio and DeQueen while also damaging several outbuildings and chicken houses north of Dierks.

Several roads were closed throughout Howard County due to flooding, including the bridge over the Saline River near Umpire, and near creeks in Center Point and just southwest of Nashville.				
<p>An upper level low pressure system progressed east southeast from the Pacific Northwest into the Central and Southern Rockies on the morning of February 20th, reinforcing a cold front slowly southeast into Southeast Oklahoma, Northeast Texas, and Southwest Arkansas during the early morning hours of February 21st. A deep southwest flow aloft was present along and behind the front across the Southern Plains and Mississippi Valley, with weak embedded disturbances in the flow helping to enhance the development of scattered to numerous showers and thunderstorms along and behind the front. A warm, moist, and weakly unstable air mass spread north ahead of the front into Northeast Texas, Southeast Oklahoma, Southwest Arkansas, and North Louisiana, with the southwest flow aloft tapping into the subtropical jet, thus transporting Pacific moisture northeast along and behind the front. Periods of moderate to at times, heavy rainfall fell along and behind the front across Southwest Arkansas during the evening hours on the 20th through much of the 21st before gradually diminishing during the late evening hours. However, additional periods of moderate to heavy rain spread across much of Southwest Arkansas on February 22nd north of the cold front, and continued through the morning hours on the 23rd. Widespread rainfall amounts of four to in excess of eight inches fell across much of Southwest Arkansas during this 3 day period, resulting in widespread flash flooding.</p>

High water covered Highway 278 near Nashville.

A warm front lifted north into Eastern Oklahoma and Central Arkansas during the morning hours of February 24th, resulting in a large warm and humid air mass across the Ark-La-Tex region. Meanwhile, showers and thunderstorms increased across North Texas during the morning as well, ahead of a strong upper trough and attendant cold front that ejected east across the Southern Plains and Mississippi Valley. The air mass ahead of the front was moderately unstable, allowing the storms to intensify and become severe as they moved into McCurtain County Oklahoma and the northern portions of Southwest Arkansas. These storms downed trees in Sevier and Howard Counties, with locally heavy rainfall moving repeatedly over the same areas resulting in flash flooding across Howard County as well.

HOWARD COUNTY --- 1.2 SSW MUDDY FORK [34.11, -93.89], 1.4 SSW MUDDY FORK [34.11, -93.89], 1.3 S MUDDY FORK [34.11, -93.88], 1.1 S MUDDY FORK [34.11, -93.88]

	02/28/18 23:59 CST	0		Source: Law Enforcement

Highway 369 near the intersection of Gum Tree Road was flooded and closed.

A warm, moist, and unstable air mass remained in place across much of the Ark-La-Tex on February 28th, as a warm front quickly returned back north into Southern Kansas and Missouri. A positive tilt upper level trough of low pressure traversed the Southern Plains during the afternoon, thus increasing large scale ascent resulting in showers and thunderstorms becoming numerous during the evening hours along a convergent elevated boundary that extended north of the Interstate 30 corridor of Northeast Texas and Southwest Arkansas. An approaching cold front and dry line from the west also helped to enhance thunderstorm organization, resulting in areas of heavy rain developing atop already saturated ground conditions from heavy rainfall that fell since February 20th. Additional rainfall amounts of 2-5 inches fell across much of Southwest Arkansas during the afternoon and evening of the 28th, which continued into the morning hours of March 1st. This resulted in flash flooding at various locations in Southwest Arkansas, which lingered into the predawn hours on March 1st.

02/21/18 08:00 PST	0	

Unseasonably cold temperatures and frost caused potentially significant damage to the 2018 Central Valley almond crop harvest by happening during the sensitive blooming phase. Temperatures in many locations reached or fell below the critical bloom temperature of 27. Some in the agricultural community were projecting frost damage "...worst since perhaps the 1970's." (AgFax Tree Crops, Feb 26, 2018).

Snow fell in the Sierra, with unusually cold temperatures allowing snow down into the Sierra foothills, to elevations as low as 1400 feet. This caused some travel slow downs and delays in areas that usually don't see accumulating snow.

02/26/18 15:30 PST	0	Source: Fire Department/Rescue

Large amounts of small hail blanketed downtown and northern Sacramento, Natomas, and adjacent portions of I5, causing major traffic problems during the afternoon commute. Hail fell 2 to 4 inches deep in portions of north Sacramento and Natomas. Snow plows were required to remove hail in some areas. Some damage was done to awnings and parking lot covers. The California State Library roof suffered damage and leaked, with hundreds of rare books soaked with water.

Low elevation snow caused significant travel problems as well as school delays and closures in the foothills. Snow also resulted in chain controls and travel slowdowns in the mountains. The snow continued into early March, bringing additional impacts.

02/12/18 11:30 PST	0	Tornado (EF0, L: 0.30 mi , W: 20 yd)
02/12/18 11:32 PST	0	Source: Broadcast Media

A tornado briefly touched down in rural farmland between Riverbend Ave. and Goodfellow Ave. southeast of Sanger and was captured on video and relayed to the NWS by a media source.

High pressure brought a prolonged period of unseasonably warm temperatures to begin February as temperatures were 10 degrees or more above seasonal normals across much of the are for the first 10 days of the month. A low pressure system dropping into the Great Basin on the 10th brought a period of increased winds to the Kern County Mountains and Deserts during the late morning and early afternoon as strong mid level winds mixed down to the surface where there were numerous reports of gusts between 45 and 50 mph. Another trough pushed through the Great Basin on the evening of the 11th through the morning of the 12th which pushed a cold front through Central California and brought another period of increased winds to the area and there were several reports of wind gusts between 50 and 55 mp in the Kern County Mountains and Deserts. this system also brought some light precipitation to the area with amounts generally less than a tenth of an inch of liquid precipitation in post-frontal showers on the 12th. A weak tornado briefly touched down in rural farmland near Sanger during the late morning of the 12th.

(CA-Z092) SE S.J. VALLEY

Storm Data and Unusual Weather Phenomena - February 2018

	02/18/18 21:27 PST		0	High Wind (MAX 72 kt)
	02/19/18 02:32 PST		0	

President's Day weekend got off to a warm and dry start across the area, but the weekend ended on the chilly side as a strong cold front pushed across Central California on the evening of February 18. Gusty winds accompanied the front and continued behind the cold front overnight and well into the President's Day holiday before diminishing by afternoon. Several locations in the San Joaquin Valley measured wind gusts between 35 and 45 mph while several stations in the Kern County Mountains and Deserts reported wind gusts between 45 and 55 mph with a few low impact indicator locations reporting stronger gusts. In addition to the strong winds, light snow fell across portions of the Kern County Mountains in post frontal showers and several locations picked up between a dusting to an inch of snowfall.

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

	02/20/18 02:00 PST		0	Frost/Freeze
	02/21/18 08:00 PST		0.15B	

A deep upper trough over the Great Basin provided for a cold northerly flow over central California for several days beginning on the afternoon of February 19. This resulted in a cold and dry airmass becoming settled over the San Joaquin Valley by the morning of February 20 as the valley experienced its coldest morning in several years at many locations as many reporting stations reported several hours of subfreezing temperatures. Since many trees and plants were already in bloom, numerous crops experienced significant damage from the cold overnight temperatures. The snap pea crop was nearly wiped out entirely and several nut orchards experienced significant crop damage as the almond crop was especially hit hard. Damage to citrus was somewhat mitigated by the fact that much of the crop had already been harvested. The damage would have been significantly greater if not for frost protection measures taken by several growers.

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

	02/21/18 02:00 PST		0	Frost/Freeze
	02/21/18 08:00 PST		0	

The cold airmass over the San Joaquin Valley remained in place as clear skies and light winds prevailed overnight. Radiational cooling allowed for temperatures to drop below the freezing mark for several hours once again during the morning of February 21.

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

	02/22/18 02:00 PST		0	Frost/Freeze
	02/22/18 08:00 PST		0	

Although a storm was expected to bring increasing clouds to the area on the morning of February 22, this system took a little longer than anticipated to reach Central California and skies remained clear in the San Joaquin Valley for much of night allowing for another night of radiational cooling to take place. Temperatures dropped below the freezing in the San Joaquin Valley for several hours for the third consecutive morning.

(CA-Z095) KERN CTY MTNS

	02/22/18 13:32 PST		0	High Wind (MAX 59 kt)
	02/22/18 15:27 PST		0	

A cold low pressure system dropped south from the Pacific Northwest during the afternoon of February 22 bringing increased winds and showery precipitation to much of the area. Several locations in the Kern County Mountains and Deserts reported wind gusts between 35 and 45 mph while a few low impact indicator sites reported stronger gusts. In addition to the increased winds, much of the Southern Sierra Nevada picked up between 5 and 10 inches of new snow while lesser amounts accumulated in the Southern Sierra Foothills and Kern County Mountains where there where travel was adversely impacted as the snow level lowered to near 1500 feet.

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

	02/24/18 02:00 PST		0	Frost/Freeze
	02/24/18 08:00 PST		0	

With a cold airmass remaining in place over the San Joaquin Valley, clearing skies and light winds allowed for temperatures to drop below the freezing mark on the morning of February 24 after clouds and increased winds kept temperatures up the morning before.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/25/18 03:00 PST		0	Frost/Freeze
	02/25/18 08:00 PST		0	

Although the cold airmass over the San Joaquin Valley moderated somewhat on the February 24, clear skies and light winds overnight resulted in another morning of subfreezing temperatures on the east side of the San Joaquin Valley on the morning of February 25. Overnight temperatures in the valley moderated the next two mornings as a low pressure system brought widespread clouds and precipitation into the area by February 26. While this system brought some generally light precipitation to the area through the morning of February 27 as most of the moisture and dynamics with this system remained over Northern California, there were some impacts to travel in the Southern Sierra Foothills and the Kern County Mountains as snow levels lowered to around 2000 feet. Temperatures across the area were well below normal for the last 10 days of February following an unseasonably warm start to the month.

CALIFORNIA, Southeast

(CA-Z520) OWENS VALLEY, (CA-Z525) MORONGO BASIN

02/18/18 15:42 PST	60K	High Wind (MAX 56 kt)
02/19/18 09:25 PST	0	

A deep, cold low pressure system and associated cold front brought high winds to portions of the Mojave Desert and Owens Valley.

02/14/18 21:00 MST	0	Winter Storm
02/16/18 00:00 MST	0	

The progression and eventual merging of two weather disturbances across western Colorado combined with a strong polar and sub-tropical jet to produce significant to heavy snowfall across most Colorado mountains and some higher valley locations. Snowfall began over the higher terrain on the evening of Wednesday, February 14th before increasing in coverage and continuing through the night of Thursday, February 15th. The heaviest snowfall fell Thursday morning and early Thursday afternoon. The support of the two upper level jets overhead enhanced snowfall rates and allowed gusty winds to mix down to the surface which resulted in periods of reduced visibility in blowing snow.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

(CO-Z001) LOWER YAMPA RIVER BASIN	02/19/18 00:00 MST		0	Blizzard
	02/19/18 09:00 MST		0	

A strong cold front brought widespread snowfall and localized blizzard conditions to much of western Colorado. Snow initially began in southwesterly flow across the high terrain of southwestern Colorado late Sunday night, February 18th, before the front moved through on Monday, February 19th. Travel was severely impacted over the high mountain passes throughout the event.

(CO-Z006) GRAND VALLEY	02/18/18 17:30 MST		1K	Strong Wind (MAX 35 kt)
	02/18/18 18:30 MST		0	

(CO-Z007) DEBEQUE TO SILT CORRIDOR, (CO-Z011) CENTRAL GUNNISON AND UNCOMPAHGRE RIVER BASIN, (CO-Z019) SOUTHWESTERN SAN JUAN MOUNTAINS	02/19/18 10:00 MST		0	High Wind (MAX 100 kt)
	02/19/18 15:00 MST		0	

Strong winds ahead of a strong cold front on Sunday, February 18th increased even more with the passage of the front across western Colorado on Monday, February 19th. Both days resulted in gusty surface winds across many valleys.

A low pressure developed along a frontal boundary along the southeast coast on the evening of Saturday, February 17, 2018. This low gradually became better organized as it moved up the coast towards the 40°N/70°W benchmark early Sunday, February 18, 2018. This system brought heavy snow to southwest Connecticut and light to moderate snowfall across central and eastern Connecticut. Warmer temperatures across the southeastern portion of the state limited snowfall accumulation.

DELAWARE

KENT COUNTY --- 0.9 SE LITTLE HEAVEN [39.04, -75.46], 0.6 E LITTLE HEAVEN [39.05, -75.46], 0.8 E LITTLE HEAVEN [39.05, -75.46], 1.0 SE LITTLE HEAVEN [39.04, -75.45]

A portion of the road washed out at Sheffield Lane and Highway 185. This was caused by a long duration of moderate to occasionally heavy rain.

For the first time since January 2017, an event including both flooding and tornadoes impacted our area starting on February 11, 2018. Two tornadoes touched down across inland portions of the Florida Panhandle before sunrise, followed by persistent heavy rainfall that resulted in flooding at several river sites. As an upper level trough dug southward across the western and central U.S., southerly flow drew moisture from the Gulf of Mexico northward into the tri-state area over the weekend. Upper air soundings measured this increased moisture with precipitable water values around 1.5 inches on Sunday, well above the 90th percentile and a record for the 12z February 11 sounding, although the record for that date and time are below the average max for this time of year. With a cold front and upper level trough west of the area, the persistent deep layer moisture helped to create a favorable set-up for high rainfall amounts. This wet pattern resulted in copious amounts of rainfall across the tri-state region. The highest rainfall amounts were across the Florida Panhandle where 8 to 10 inches fell with localized areas receiving more than 10 inches across coastal Walton and Bay counties. The highest observed rainfall total was in Walton County, where a 48-hour rainfall total of 11.45 inches was recorded. Across southeast Alabama and portions of southwest Georgia, widespread 6 to 8 inches of rain fell. While one Flash Flood Warning was issued, the majority of the impacts from this event were from moderate rainfall rates over a prolonged period of time as convection trained across the tri-state area. These high rainfall totals resulted in numerous road closures across the Florida Panhandle from water covered roads and washed out roadways. In addition, a few roads were closed across southeast Alabama.

GEORGIA, North and Central

(GA-Z015) LUMPKIN, (GA-Z016) WHITE, (GA-Z023) HALL, (GA-Z025) JACKSON, (GA-Z027) MADISON, (GA-Z034) GWINNETT				
	02/04/18 04:00 EST		0	Winter Weather
	02/04/18 10:00 EST		0	

An area of low pressure that developed along an old frontal boundary across the northern Gulf of Mexico spread light rain across Georgia during the early morning hours. Cold, dry air in place across northeast Georgia led to a period of light freezing rain.

HARALSON COUNTY --- 0.5 WSW BREMEN [33.72, -85.16], 0.7 NE BREMEN [33.73, -85.14]				
	02/07/18 07:43 EST		50K	Tornado (EF0, L: 1.25 mi , W: 250 yd)
	02/07/18 07:45 EST		0	Source: NWS Storm Survey

A National Weather Service survey team found that an EF0 tornado with maximum wind speeds of 85 MPH and a maximum path width of 250 yards touched down on the west side of Bremen north of Tallapoosa Street between Ayers Street and Sewell Road. The tornado then moved northeast paralleling Tallapoosa Street. On Kaiser Street, multiple large trees were snapped near their base or uprooted, including one that fell onto a duplex causing substantial damage to the roof, walls, a carport and two nearby vehicles. The tornado continued northeast, snapping and uprooting several more trees between Church Street and Gordon Street. The tornado dissipated around the intersection of Pine Street and the Bryan Street Bypass. [02/07/18: Tornado #1, County #1/1, EF-0, Haralson, 2018:001].

HEARD COUNTY --- 3.0 ENE ROOSTERVILLE [33.42, -85.13]

	02/07/18 09:08 EST		0	Source: Emergency Manager

The Heard County Emergency Manager reported multiple trees blown down along Huff Road.

HEARD COUNTY --- 1.2 ESE O NEALS XRDS [33.19, -85.20], 1.1 ENE AUBREY [33.21, -85.11]				
	02/07/18 09:03 EST		25K	Tornado (EF1, L: 5.29 mi , W: 250 yd)
	02/07/18 09:08 EST		0	Source: NWS Storm Survey

A National Weather Service survey team found that an EF1 tornado with maximum wind speeds of 95 MPH and a maximum path width of 250 yards touched down along Butler Road in southwest Heard County just east of Whitewater Creek. The tornado moved east northeast, crossing Victory Road uprooting and snapping around a dozen trees. The tornado then continued east northeast crossing just north of the intersection of Highway 219 and Victory Road. On Boggus Road just north of Noles Road, dozens of trees were snapped or uprooted. The highest wind speeds for this tornado were estimated here at 95 mph. The tornado then moved eastward before ending just north of the intersection of Bevis Road and Brush Creek Road. [02/07/18: Tornado #2, County #1/1, EF-1, Heard, 2018:002].

The Georgia Department of Transportation reported a large tree blown down onto Interstate Highway 20 west of Covington blocking all lanes on one side of the highway.

TALBOT COUNTY --- 2.0 E BROWNSAND [32.60, -84.52], 0.9 E JUNCTION CITY [32.60, -84.45]				
	02/07/18 11:10 EST		35K	Tornado (EF0, L: 3.70 mi , W: 200 yd)
	02/07/18 11:14 EST		0	Source: NWS Storm Survey

A National Weather Service survey team found that an EF0 tornado with maximum wind speeds of 85 MPH and a maximum path width of 200 yards touched down west of Junction City near the intersection of Carlyle Road and South Taylor Road where a few small softwood trees were snapped or uprooted. The tornado moved east northeast snapping or uprooting about 15 to 20 small softwood trees just west of the intersection of Highway 96 and Highway 90. As the tornado entered Junction City, some siding was removed from a small pole barn on Rock Church Road, and additional small trees were snapped. The tornado then turned southeast and moved across Junction City snapping 15 to 20 more trees along Broadwood Circle before ending. [02/07/18: Tornado #3, County #1/1, EF-0, Talbot, 2018:003].

DODGE COUNTY --- 1.6 SSW ROWLAND [32.41, -83.18]				
	02/07/18 13:02 EST		12K	Thunderstorm Wind (EG 50 kt)
	02/07/18 13:15 EST		0	Source: Trained Spotter

A trained spotter reported multiple trees and power lines blown down in the 1500 block of the Chester-Cochran Highway.

A line of thunderstorms ahead of a strong cold front swept through north and central Georgia during the morning into the early afternoon. Despite only marginal instability, strong low and mid-level shear resulted in isolated reports of thunderstorm wind damage and a few brief tornadoes.

SUMTER COUNTY --- 3.8 SSW CROXTON CROSSROADS [31.90, -84.34]				
	02/25/18 13:15 EST		5K	Thunderstorm Wind (EG 45 kt)
	02/25/18 13:20 EST		0	Source: Emergency Manager

The Sumter County Emergency Manager reported a carport lifted and tossed by the winds associated with a line of thunderstorms at a residence on Boo Cosby Road.

A weakening line of showers and a few thunderstorms ahead of a cold front sweeping southeast through central Georgia managed to produce winds strong enough to damage a carport in extreme southwestern Sumter County.

LAGUNA MADRE FROM PORT OF BROWNSVILLE TO ARROYO COLORADO COUNTY --- 1.1 SW PORT ISABEL [26.06, -97.21]				
	02/24/18 15:30 CST	1	0	Marine Strong Wind (MG 30 kt)
	02/24/18 17:00 CST		0	Source: Coast Guard

A 38-year-old woman drowned while operating a salvage tug boat which capsized in the Port Isabel Turning Basin on February 24, 2018. Weather conditions were likely a factor, but an investigation is still pending by the United States Coast Guard station on South Padre Island, TX. Sustained winds at the nearby Port Isabel C-MAN station were consistently around 20 to near 23 knots, peaking at 22.74 knots at 336 PM CST, with a peak gust of 29.55 knots at 348 PM CST. Choppy to rough waves were likely a contributing factor.

Direct Fatalities: F38BO

The combination of high pressure over the Gulf of Mexico with relatively strong low pressure in the lee of the Sierra Madre Mountains, along with a low level jet of just below 50 knots between 3 and 6 thousand feet created choppy to rough waters over Laguna Madre for much of February 24th. The wind and wave action contributed to a professional tug boat capsize and resultant death in the Port Isabel Turning Basin that afternoon.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/18/18 13:10 HST		0	Flash Flood (due to Heavy Rain)
	02/18/18 20:04 HST		0	Source: Fire Department/Rescue

In windward Oahu, heavy rain again closed Kamehameha Highway in the area along the Waikane and Waiahole streams. Also, firefighters responded to a man trapped in his vehicle by rising water near Kamehameha Highway and Wailehua Road. Another area of flooding occurred near the junction of Kalaniana'ole Highway and Kealahou Street near Sandy Beach in southeast Oahu around 1845 HST on the 18th.

MAUI COUNTY --- 1.0 NNE WAIHEE [20.94, -156.52], 1.0 NNE WAIHEE [20.94, -156.52], 1.0 NNE WAIHEE [20.94, -156.51], 1.1 NNE WAIHEE [20.94, -156.52]

02/18/18 14:17 HST		0	Flash Flood (due to Heavy Rain)

02/18/18 20:16 HST	1	0	Flash Flood (due to Heavy Rain)
02/19/18 00:49 HST		0	Source: County Official

Flooding rain damaged a store in the Hamakua District on the Big Island of Hawaii, in the town of Honokaa. Also, a man died in leeward Big Island in the later evening on the 18th. He was staying in a shack-like structure on a coffee farm in Holualoa when, apparently, strong and gusty winds from a thunderstorm blew the structure about 150 feet from its foundation; and he was killed.

Direct Fatalities: M74OU

HAWAII COUNTY --- 2.3 SSW OOKALA [19.99, -155.30], 4.3 WNW PAHOA [19.53, -155.02]

02/19/18 14:49 HST		0	Heavy Rain
02/19/18 16:06 HST		0	Source: Official NWS Observations

With a weakening front over the islands and an upper low northwest of Kauai, heavy showers and thunderstorms developed over the state. Drenching rain led to periods of flash flooding over several isles, and gusty winds downed trees and power lines. The cost of any damages was not available.

A man on the Big Island of Hawaii perished, apparently from being tossed violently by gusty winds associated with a thunderstorm in the later evening on the 18th of February. No other fatalities or serious injuries were reported.

	02/24/18 10:00 PST		0	Heavy Snow
	02/26/18 00:00 PST		0	

Heavy upslope snow fell on the 24th into the 25th with some heavier snow banding late on the 25th.

IDAHO, Northwest

LATAH COUNTY --- 1.5 WSW KENNEDY FORD [46.91, -117.01], 2.3 SW KENNEDY FORD [46.89, -117.01], 1.8 ESE KENNEDY FORD [46.91, -116.94], 1.0 SSE POTLATCH [46.91, -116.87], 0.4 WNW ONAWAY [46.93, -116.88], 2.4 WNW POTLATCH [46.93, -116.93]				
	02/04/18 20:45 PST		0.50K	Flood (due to Heavy Rain / Snow Melt)
	02/05/18 22:30 PST		0	Source: River/Stream Gage

The USGS Palouse River Gage at Potlach recorded a rise above the Flood Stage of 15.0 feet at 8:45 PM February 4th. The river crested at 15.9 feet at 10:45 AM February 5th and then receded below Flood Stage at 10:30 PM February 5th.

Heavy rain and mid elevation snow melt caused the Palouse river to flood on February 4th and February 5th. In the three day period leading up to the flooding a COOP weather station at Potlach recorded 1.16 inches of rain. The river extensively flooded a local road bed but no damage to structures was noted.

(ID-Z001) NORTHERN PANHANDLE, (ID-Z002) COEUR D'ALENE AREA, (ID-Z003) IDAHO PALOUSE, (ID-Z004) CENTRAL PANHANDLE MOUNTAINS				
	02/13/18 21:00 PST		0	Heavy Snow
	02/14/18 13:00 PST		0	

During the night of February 13th a surface low pressure moved through eastern Washington. North Idaho was under the cold side of this low pressure track and received widespread heavy snow during the day on February 14th.

(ID-Z001) NORTHERN PANHANDLE, (ID-Z002) COEUR D'ALENE AREA, (ID-Z004) CENTRAL PANHANDLE MOUNTAINS				
	02/17/18 02:00 PST		0	Heavy Snow
	02/18/18 15:00 PST		0	

A stationary front laying west to east over eastern Washington and north Idaho on February 17th developed into surface low pressure and finally an Arctic cold front which sagged southward through the region. A fetch of Pacific moisture fed into the surface low and enhanced into a period of moderate intensity snow during the day of February 17th and into the morning of the 18th. Heavy snow accumulations resulted over much of north Idaho before very dry Arctic air descended into the region behind the front and ended further precipitation.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
(ID-Z002) COEUR D'ALENE AREA, (ID-Z003) IDAHO PALOUSE, (ID-Z004) CENTRAL PANHANDLE MOUNTAINS				
	02/23/18 18:00 PST		0	Heavy Snow

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/25/18 10:00 MST		0	Dust Storm
	02/25/18 21:00 MST		0	

Heavy snow and strong winds occurred for a three day period mainly over the weekend. The worst conditions were in the Upper Snake Highlands where two feet of snow fell in the Island Park area fell with many road closures. A dust storm closed interstate 15 north of Idaho Falls on the 25th.

IDAHO, Southwest

(ID-Z014) UPPER TREASURE VALLEY

02/22/18 03:00 MST	0	Heavy Snow
02/22/18 09:00 MST	0	

A strong surface low tracked northeast across Southwest Idaho producing areas of heavy snow, particularly in the Treasure Valley.

(ID-Z011) WEST CENTRAL MOUNTAINS, (ID-Z013) BOISE MOUNTAINS

02/25/18 07:00 MST	0	Heavy Snow
02/26/18 06:00 MST	0	

A snow storm which began on February 25th brought periods of heavy snow to Southwestern Idaho. The heaviest snow fell at elevations above 4000 feet where amounts reached 12 to 18 inches in less than 24 hours. When the snow ended early in the morning on February 26th, McCall, Donnelly, and Cascade, Idaho measured 10 to 12 inches of new snow. The higher mountain areas including the ski resorts measured around 18 inches of new snow. The heavy mountain snow significantly increased avalanche danger during this time which prompted the closure of Idaho 21 until the danger passed.

02/05/18 14:30 CST	0	Heavy Snow
02/05/18 23:00 CST	0	

A vigorous upper-level disturbance tracking from the Northern Rockies into the Ohio River Valley brought a period of moderate to heavy snow to north-central Illinois during the afternoon and evening of February 5th. A persistent mesoscale band developed...depositing 6 to 10 inches of snow along and north of a Galesburg to Lacon line.

CHAMPAIGN COUNTY --- 2.6 WNW LUDLOW [40.40, -88.17], 6.9 N PENFIELD [40.40, -87.93], 3.3 E BROADLANDS [39.93, -87.94], 2.0 E LONGVIEW [39.88, -88.03], 3.1 S IVESDALE [39.89, -88.45], 5.6 SSW SEYMOUR [40.03, -88.46]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Around 1.00 to 1.75 inches of rain fell onto frozen ground late on February 19th. This set the conditions for rapid flash flooding to occur on February 20th into the 21st when 3.00 to 5.00 of rain occurred. Numerous creeks and streams rapidly flooded in central and eastern Champaign County. Numerous roads in Champaign, Urbana, Savoy, St. Joseph, Rantoul and Thomasboro were impassable. Additional rainfall on February 22nd and 23rd resulted in storm total amounts ranging from 4.25 to 7.00 inches in central and eastern Champaign County. Roads in St. Joseph, Ogden, Homer and Sidney remained flooded for three days. A person attempting to cross a flooded road near the Salt Creek, north of St. Joseph had to be rescued during the late morning of February 21st. No injuries were reported, but the vehicle sank into the Salt Creek. The flooding finally dissipated during the early morning of February 23rd.

VERMILION COUNTY --- 3.2 ENE CHENEYVILLE [40.49, -87.53], 3.6 E GRAPE GREEK [40.07, -87.53], 6.2 WSW FAIRMOUNT [40.02, -87.94], 2.3 W HOPE [40.20, -87.94], 1.7 NE EAST LYNN [40.49, -87.76]

02/21/18 01:00 CST	3M	Flood (due to Heavy Rain)
02/23/18 16:00 CST	0	Source: Emergency Manager

Around 1.00 to 1.75 inches of rain fell onto frozen ground late on February 19th. This set the conditions for rapid flash flooding to occur on February 20th into the 21st when 3.00 to 5.00 of rain occurred. Numerous creeks and streams rapidly flooded in northern and central Vermilion County. Numerous roads in Hoopeston, Bismarck and Danville were impassable. Another 0.50 to 1.00 inch of rain from late on February 21st into early February 23rd exacerbated the flooding. The North Fork of the Vermilion River flooded so quickly that 25 homes had to be evacuated by boat in the Morin addition on the west side of Danville early in the morning on February 21st. A person attempting to cross a flooded section of Illinois Route 1, between Hoopeston and Rossville had to be rescued from the roof of their car, also early in the morning on February 21st. The flood waters took more than two days to recede, with much of the flooding ending by the late afternoon of February 23rd.

A slow-moving frontal boundary brought very heavy rainfall to central Illinois from Monday, February 19th through Tuesday, February 20th. Many locations east of I-55 and north of I-70 picked up 3 to 5 inches of rain...with locally higher amounts in excess of 6 inches. The heavy rain occurring on top of the frozen ground led to significant run-off and widespread flooding along area creeks and streams. Several roads had water flowing across them during the evening of February 20th, particularly across portions of Champaign and Vermilion counties. In addition, the Vermilion River exceeded its banks...forcing the evacuation of 25 homes on the west side of Danville. High water continued to impact eastern Champaign County into Vermilion County into Friday, February 23rd.

Several roads in Rochelle were closed due to flooding.

Very heavy rain fell across much of eastern Illinois on February 19th and February 20th which caused areal flooding across some areas and major flooding on some rivers.

ILLINOIS, Northwest

(IL-Z016) HENRY, (IL-Z024) MERCER				
	02/05/18 16:00 CST		0	Heavy Snow
	02/05/18 23:00 CST		0	

A widespread snow event took place over Iowa and Illinois during the day through evening on the February, 5th, 2018. In most locations, this event produced a widespread 3 to 6 inch accumulation in about 12 hours, which combined with very light winds, to produce moderate impacts corresponding to a Winter Weather Advisory. A band of much heavier snow fell on the south edge of the widespread snow event, and was only 20 to 30 miles wide, but generally stretched across Iowa and Illinois along a line from near Grinnell, Iowa, to near Wapello, Iowa, to just north of Galesburg, Illinois. In that narrow axis, 7 to 10 inches of snow was observed.

(IL-Z001) JO DAVIESS, (IL-Z002) STEPHENSON, (IL-Z007) CARROLL				
	02/07/18 22:00 CST		0	Heavy Snow
	02/08/18 12:00 CST		0	

An upper level storm system tracked east across the eastern Great Plains into northern Missouri and Illinois on from Feb. 8-9, 2018, bringing widespread snow to portions of eastern Iowa and northwest Illinois. The heaviest snowfall fell along the Highway 20 corridor, where amounts of 6 to 8 inches were reported in Independence, Dubuque, and Freeport. To the south, around 2 to 5 inches fell from the Interstate 80 corridor to Highway 30.

STEPHENSON COUNTY --- 3.4 W WINSLOW [42.50, -89.87], 3.5 NNE LAKE SUMMERSET [42.50, -89.37], 3.6 ESE GERMAN VLY [42.20, -89.40], 1.0 SW PEARL CITY [42.26, -89.84]				
	02/19/18 10:00 CST		0	Flood (due to Heavy Rain / Snow Melt)
	02/28/18 23:59 CST		0	Source: Emergency Manager

Emergency management reported widespread creek and Pecatonica River flooding beginning mid morning February 19th. This impacted the towns of Freeport, Pearl City, Winslow, and McConnell. Roads were covered in water, especially between Pearl City and Freeport. Homes and businesses were surrounded by water in many locations, with water in basements. There were 41 individuals and 10 animals rescued or evacuated from Freeport's 3rd ward. This overland flood event quickly evolved into a major river flood event for the Pecatonica River at Freeport, Illinois.

The Pecatonica River reached Major Flood level of 16 feet at 3 AM, February 25, and fell below Major Flood level at 11 AM, March 2nd. The Pecatonica River at Freeport crested at 16.12 feet, at 3 PM, February 25.

After a snowy early February, northwest Illinois experienced both a heavy rain event and extensive snowmelt on February 19th. The ground was frozen, which allowed for widespread creek flooding and areal flooding in Stephenson County. The flooding flowed most significantly through Yellow Creek and the Pecatonica River. The towns of Freeport, Pearl City, Winslow, and McConnell were impacted during this event.

WHITESIDE COUNTY --- 0.7 WNW STERLING [41.80, -89.71], 0.2 ENE ROCK FALLS [41.77, -89.70], 6.4 SW ERIE [41.58, -90.17], 6.1 WSW ERIE [41.61, -90.18]				
	02/22/18 14:40 CST		0	Flood (due to Heavy Rain / Snow Melt)
	02/26/18 02:00 CST		0	Source: Emergency Manager

Emergency management relayed widespread flooding of farms and roads near the Rock River, associated with major river flooding, as well as ice jam activity. At the Joslin, Illinois Rock River gauge exceeded major flood stage of 16.5 feet, at 240 PM, February 22nd, and fell back below major flood stage at 2 AM, February 26th. The Rock River at Joslin crested at 18.31 feet, at 115 PM, February 23rd.

WHITESIDE COUNTY --- 0.8 W COMO [41.77, -89.79], 0.6 WSW ERIE [41.65, -90.09], 0.8 WSW SPRING HILL [41.62, -90.06], 1.6 SSE COMO [41.75, -89.76]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/23/18 00:00 CST		0	Flood (due to Ice Jam)
	02/23/18 00:00 CST		0	Source: Emergency Manager

Whiteside County emergency management reported a significant ice jam that brought widespread inundation of farms and fields near the Rock River between Como and Erie Illinois. This ice jam was associated with major flooding along the Rock River, but enhanced that flooding considerably in that area.

ROCK ISLAND COUNTY --- 2.9 SSE CARBON CLIFF [41.46, -90.36], 2.7 WSW MILAN [41.44, -90.62], 1.4 SW ROCK IS [41.49, -90.60], 2.0 SSE SILVIS HGTS [41.47, -90.42], 1.1 WNW JOSLIN [41.55, -90.24], 1.9 ESE JOSLIN [41.54, -90.19]

	02/23/18 01:20 CST		0	Flood (due to Heavy Rain / Snow Melt)
	02/28/18 23:59 CST		0	Source: Emergency Manager

Emergency management relayed widespread flooding of farms, homes, cabins, and roads near the Rock River, associated with major river flooding, as well as ice jam activity. At the Moline, Illinois Rock River gauge exceeded major flood stage of 14 feet, at 120 AM, February 23rd, and fell back below major flood stage at 830 AM, March 1st. The Rock River at Moline crested at 15.31 feet, at 11 AM, February 24rd.

During a major Rock River flood event, which was occurring from February 20 through early March, an ice jam occurred near Prophetstown and Como Illinois. This localized ice jam brought significant local flooding beyond the river flood to portions of Whiteside County Illinois. The major river flooding continued into early March.

ILLINOIS, South

	02/06/18 18:00 CST		0	Winter Weather
	02/07/18 03:00 CST		0	

A moist 500 mb shortwave trough tracked east from the Plains, causing a surface low pressure center to develop northeast from Texas to the central Appalachians. Widespread wintry precipitation occurred as colder air filtered south on the back side of the low. Around one-tenth of an inch of ice glazed surfaces across southern Illinois. Near the onset of precipitation, a period of sleet was reported. Most of the precipitation fell in the form of freezing rain. The automated observing station at the Carbondale airport measured 0.11 inch of ice accretion. Most of the icing was on trees, power lines, and elevated surfaces during the precipitation. After the precipitation ended, temperatures fell through the 20's, causing icy spots to develop even on paved surfaces. Slick roads and motor vehicle accidents were common during the early morning hours. Several wrecks occurred on Interstate 57. In Union County, a tractor-trailer rig crashed and caught fire on Interstate 57. In Franklin County, a Greyhound bus crashed into a trailer being pulled by a sport utility vehicle.

(IL-Z075) JEFFERSON, (IL-Z080) PERRY, (IL-Z081) FRANKLIN, (IL-Z084) JACKSON, (IL-Z085) WILLIAMSON, (IL-Z088) UNION, (IL-Z092) ALEXANDER

	02/11/18 02:00 CST		0	Winter Weather
	02/11/18 08:00 CST		0	

Over parts of southern Illinois along and west of Interstate 57, a mixture of freezing rain and sleet caused a light glaze of ice. Most of the icing was on elevated objects such as cars and decks. Some secondary roads and bridges were icy, resulting in several accidents. The U.S. Highway 51 bridge over the Ohio River near Cairo became icy, resulting in an accident. Two accidents were reported on Interstate 57 between Cairo and the Interstate 24 interchange. The mixed precipitation was caused by a surface low pressure center that tracked northeast from Louisiana to the middle Ohio Valley.

(IL-Z075) JEFFERSON, (IL-Z076) WAYNE, (IL-Z077) EDWARDS, (IL-Z078) WABASH, (IL-Z080) PERRY, (IL-Z081) FRANKLIN, (IL-Z082) HAMILTON, (IL-Z083) WHITE, (IL-Z084) JACKSON, (IL-Z085) WILLIAMSON, (IL-Z086) SALINE, (IL-Z087) GALLATIN, (IL-Z088) UNION, (IL-Z089) JOHNSON, (IL-Z090) POPE, (IL-Z091) HARDIN, (IL-Z092) ALEXANDER, (IL-Z093) PULASKI, (IL-Z094) MASSAC

	02/15/18 10:00 CST		19K	Strong Wind (MAX 40 kt)
	02/15/18 21:30 CST		0	

Strong southwest winds occurred ahead of a cold front that was dropping southward across Missouri and Illinois. Peak wind gusts were mostly from 40 to 45 mph. However, the highest gust at the Carbondale airport was 46 mph.

GALLATIN COUNTY --- SHAWNEETOWN [37.70, -88.13], 1.1 NW SHAWNEETOWN [37.71, -88.15], 2.6 SW SHAWNEETOWN [37.67, -88.16], 2.1 SSW SHAWNEETOWN [37.67, -88.15]

	02/16/18 16:00 CST		0	Flood (due to Heavy Rain)

A washed out culvert prompted the closure of a street near Murphysboro High School.

WILLIAMSON COUNTY --- HERRIN [37.80, -89.03], CORINTH [37.82, -88.78], CREAL SPGS [37.62, -88.83], CARTERVILLE [37.75, -89.08]				
	02/21/18 23:00 CST		0	Flood (due to Heavy Rain)
	02/22/18 03:00 CST		0	Source: Emergency Manager

Several secondary roads were closed due to flooding within the county.

Several rounds of widespread heavy rainfall tracked northeast across southern Illinois. These rounds of heavy rain produced localized flooding of roads. In the wake of a surface cold front, a persistent southwest flow of moist air aloft generated multiple rounds of widespread rain. The two-day rainfall at the Carbondale co-operative observer site was 2.66 inches for the 21st and 22nd.

WABASH COUNTY --- 2.2 S PATTON [38.45, -87.75], 2.4 SSE PATTON [38.45, -87.73], 1.4 E MT CARMEL [38.42, -87.74], 2.4 S MT CARMEL [38.39, -87.77], 0.6 SSE ROCHESTER [38.34, -87.83], 0.9 NW ROCHESTER [38.36, -87.84]				
	02/24/18 11:00 CST		0	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Moderate flooding developed along the Wabash River in the Mt. Carmel area. Extensive flooding of low-lying agricultural land occurred. Some residents along one Mt. Carmel street and another street in the Keensburg area were forced to relocate. Several local roads were flooded, some by several feet of water. These included County Road 1280 E and three township roads south of Illinois 1 near Keensburg. The river continued rising into March.

WHITE COUNTY --- CARMI [38.08, -88.17], 2.3 ENE BROWNSVILLE [38.05, -88.21], 2.5 SE BROWNSVILLE [38.01, -88.21], 3.2 S CARMI [38.03, -88.17], 1.5 ESE CARMI MUNI ARPT [38.09, -88.13]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
Several streets were flooded in the city of Carbondale. A couple of them were barricaded. Close to an inch of rain fell in an hour during a thunderstorm. This rain occurred on ground that was saturated by nearly 5 inches of rain in the previous four days.				

FRANKLIN COUNTY --- 2.0 W WEST FRANKFORT [37.90, -88.96], 1.2 NE EZRA [37.89, -88.95], 1.2 S THOMPSONVILLE [37.90, -88.77], THOMPSONVILLE [37.92, -88.77]				
	02/24/18 17:10 CST	0		Flash Flood (due to Heavy Rain)
	02/24/18 20:00 CST	0		Source: Trained Spotter

Several roads were impassable in the southeast portion of the county. In the West Frankfort area, water was over parts of Highway 149 and nearby side roads.

WILLIAMSON COUNTY --- 2.0 E MARION [37.73, -88.89], 2.0 N MARION [37.76, -88.93], 2.0 W MARION [37.73, -88.97], 0.2 W NELSON [37.62, -88.97], CREAL SPGS [37.62, -88.83]				
	02/24/18 17:25 CST	0		Flash Flood (due to Heavy Rain)
	02/24/18 20:00 CST	0		Source: Trained Spotter

Numerous roads were flooded around Marion. Several roads in the southern portion of the county were quickly becoming impassable.

HAMILTON COUNTY --- 4.0 S MC LEANSBORO [38.04, -88.53], 4.0 E MC LEANSBORO [38.10, -88.46], 4.0 N MC LEANSBORO [38.16, -88.53], 4.0 W MC LEANSBORO [38.10, -88.60]				
	02/24/18 18:33 CST	0		Flash Flood (due to Heavy Rain)
	02/24/18 21:30 CST	0		Source: Emergency Manager

Two water rescues were conducted on flooded roads. Officials urged people to refrain from travelling due to widespread flooding in the county.

HARDIN COUNTY --- CAVE IN ROCK [37.47, -88.17], ELIZABETHTOWN [37.45, -88.30], ROSICLARE [37.42, -88.35], KARBERS RIDGE [37.58, -88.33], CADIZ [37.58, -88.22]				
	02/24/18 20:00 CST	0		Flash Flood (due to Heavy Rain)
	02/25/18 01:00 CST	0		Source: Broadcast Media

Water rescues were conducted in the county. Thunderstorms produced rainfall rates that were estimated near one-half inch per hour on ground that received 3 to 4 inches of rain in the past week.

WAYNE COUNTY --- WAYNE CITY [38.35, -88.58], 2.6 N MAYBERRY [38.31, -88.54], 3.3 S SIMS [38.32, -88.52], 1.0 NE WAYNE CITY [38.36, -88.57]				
	02/25/18 07:00 CST	0		Flood (due to Heavy Rain)
	02/27/18 08:00 CST	0		Source: River/Stream Gage

Moderate flooding of the Skillet Fork River occurred. At the Wayne City river gage, the river crested at 18.33 feet early on the 26th. Flood stage is 15 feet. Considerable flooding of low-lying agricultural land took place.

Pockets of flash flooding occurred across southern Illinois. A narrow swath of torrential rainfall occurred from Cape Girardeau, MO northeast across the Marion/Carbondale area, where streets were closed. A surface low pressure center tracked rapidly north-northeast from Arkansas to the upper Mississippi Valley, dragging a warm front north across southern Illinois. Instability was adequate for thunderstorms. A very moist air mass resulted in excessive rainfall rates, which produced flash flooding due to the water-logged ground.

02/20/18 06:50 CST	0.50M	Flood (due to Heavy Rain / Snow Melt)
02/25/18 10:45 CST	0	Source: Department of Highways

High water forced the closures of several roads in LaPorte county, including portions of US 20 and 35 and State Routes 8 and 212. The high water was the result of ditches, creeks, streams and rivers exceeding their capacity, causing extensive flooding that slowly increased over the span of a few days. State Route 8, between US 421 and State Route 39 suffered such severe flooding as a result of flood waters on the Yellow iver that a portion of the road will require complete reconstruction of a portion, causing it to remain closed for several months. See separate entry for damage to a levee in Starke county. Damage in excess of \$500,000 was reported to mainly county roads, state highways and the water treatment plant in LaPorte.

ST. JOSEPH COUNTY --- 3.2 W NORTH LIBERTY [41.54, -86.49], 3.3 SW WALKERTON [41.43, -86.52], 0.7 ENE WALKERTON [41.47, -86.47], 6.2 ESE WYATT [41.48, -86.06], 3.0 ENE GRANGER [41.76, -86.06], 2.8 NW HAMILTON [41.75, -86.52], 2.7 WSW ARDMORE [41.65, -86.53], 1.6 S ARDMORE [41.65, -86.49]

02/20/18 07:42 EST	1.10M	Flood (due to Heavy Rain / Snow Melt)
02/25/18 11:45 EST	0	Source: Emergency Manager

Extensive flooding occurred across the county as all area waterways exceeded their limited, reaching record levels in some spots. Residents had to be evacuated along many of the rivers with numerous homes and businesses suffering varying degrees of damage. In addition, numerous roads were closed due to high water for several days including portions of US 331, 20 and 6 as well as several state routes. Washouts were reported in some areas. Damage estimates totaled at least 1.1 million dollars.

LAGRANGE COUNTY --- 0.5 SSE STONY CREEK STATION [41.52, -85.65], 3.7 S STROH [41.53, -85.20], 6.7 ENE BRIGHTON [41.76, -85.20], 5.0 NW SHIPSHAWANA FLD ARPT [41.76, -85.66]

02/20/18 11:52 EST	54K	Flood (due to Heavy Rain / Snow Melt)
02/25/18 11:45 EST	0	Source: Emergency Manager

Damage occurred to several roads in the county due to high water levels on rivers, creeks and streams. Road damage was reported in parts of the county. High water levels on Whitmer and Westler lakes, located near Wolcottville caused damage to several homes and a water treatment plant suffering damage. Estimates were over 54,000 dollars.

STARKE COUNTY --- 5.3 E ORA [41.17, -86.47], 2.3 SW SAN PIERRE [41.17, -86.93], 2.7 WSW LOMAX [41.24, -86.93], 1.7 ENE ENGLISH LAKE [41.28, -86.80], 2.0 WSW BREMS [41.32, -86.74], 4.4 WNW HAMLET [41.40, -86.68], 4.0 NNW HAMLET [41.43, -86.64], 0.9 NE KOONTZ LAKE LAKE [41.43, -86.47]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/20/18 11:52 CST		1.20M	Flood (due to Heavy Rain / Snow Melt)
	02/25/18 10:45 CST		0	Source: Emergency Manager

Extensive flooding occurred across the county as rivers, creeks, streams and ditches could not keep up with the flood waters. Water was reported to be so high and fast that many ditches were breaking, allowing the water to spill onto roads and other areas. A levee on the Yellow River west of State Route 39 and south of State Route 8 was breached, causing extensive damage to the levee and increased flooding downstream. Portions of State Routes 8, 39, 10 and 23 as well as countless county roads were closed due to high water. Damage is estimated in excess of 1.2 million dollars.

PULASKI COUNTY --- 2.2 NE MONTEREY [41.17, -86.47], 2.9 ESE THORNHOPE [40.91, -86.47], 5.6 SSW FRANCESVILLE [40.91, -86.93], 6.4 NNW MEDARYVILLE [41.17, -86.93]

Extensive river basin flooding occurred across the county with several roads having to be closed at times as the Tippecanoe River went well out of its banks to near record levels. Damage was reported to many roads with some suffering partial washouts as drainage was unable to keep up with the water flow. Preliminary damage estimates were around 38,000 dollars.

MARSHALL COUNTY --- 4.5 W TEEGARDEN [41.47, -86.47], 2.0 NNE AYR [41.48, -86.06], 3.7 ESE TIPPECANOE [41.17, -86.06], 3.8 SSW CULVER [41.17, -86.47]

Damage occurred to several roads as a result of the record flooding from the Yellow River and associated drainage basin. Many county roads were closed for a period of time with even State Routes 30, 331 and 6 being impacted by flood waters. Nearly every town in the county suffered damage from the flood waters with Plymouth, Argos and Bremen suffering the most damage. Evacuations were necessary in some areas with water rescues due to rapid rise in the rivers. Preliminary damage estimates exceed 1.2 million dollars.

ELKHART COUNTY --- 4.3 NW (EKM)ELKHART MUNI AR [41.76, -86.06], 3.0 SW LOCKE [41.44, -86.06], 6.2 SSE MILLERSBURG [41.44, -85.66], 3.5 E VISTULA [41.76, -85.66]

	02/20/18 15:44 EST		0.23M	Flood (due to Heavy Rain)
	02/25/18 11:45 EST		0	Source: Emergency Manager

The heavy rainfall in the Tippecanoe River basin forced dam flows in excess of 20,000 CFS. This caused extensive flooding downstream of the dam with some neighborhoods having to have assistance evacuating and some water rescues due to rapid rises. The Diamond Point area near Monticello was impacted by the flood waters. Damage is estimated in excess of 230,000 dollars.

KOSCIUSKO COUNTY --- 3.1 WSW NAPPANEE [41.43, -86.05], 0.5 NE ENCHANTED HILLS [41.43, -85.66], 3.5 ESE PIERCETON [41.18, -85.66], 2.3 SE PIERCETON [41.18, -85.69], 0.8 E MENTONE ARPT [41.15, -86.05]

	02/21/18 08:45 EST		56K	Flood (due to Heavy Rain / Snow Melt)
	02/25/18 11:45 EST		0	Source: Emergency Manager

High water levels and subsequent flooding issues were seen across much of the county as the over 100 lakes and various creeks, streams and rivers struggle to handle the runoff of flood waters. Several roads were closed or marked for high water. Damage was estimated at around 56,000 dollars.

A slow release of a snow pack, containing one to over two inches of water, occurred in the days leading to the event which started the process of river rises in many areas. Low pressure tracked from northwest Iowa into northern Lower Michigan, which ushered in a rapid warmup and equally rapid release of any remaining water in the snow-pack. Several rounds of rain occurred between the 19th and

21st of February across the region, fed by record high precipitable water levels (by February standards) in the 1.3 to 1.5 inch range. A swath of four to six inches of rain fell northwest of a Logansport to Kendallville line. All these factors combined to cause extensive flooding on several rivers in the St Joseph, Kankakee and Upper Wabash river basins, with record crests occurring on some rivers. These water levels forced evacuations of homes and closure of businesses and schools, rescues from those driving into flood waters and an overwhelming of water treatment facilities in a few communities. While exact damage figures were not available at the time of entry of the data, preliminary data suggests values into the millions (possibly \$10 million or higher).

Dispatch reported road closures on Highway 150.				

Repeated rounds of moderate to heavy rainfall across the entire Ohio River basin totaled between 8 to 9 inches across southern Indiana from February 15 to February 28. These totals were generally 7+ inches, or 200 to 400% of normal values for mid to late February. The large areal extent of the excessive rainfall led to significant rises on area rivers, including the Ohio River. This resulted in numerous flash flood reports across all of the southern Indiana counties including road closures, road washouts and water rescues.

Strong thunderstorms, with very heavy rainfall, developed ahead of cold front and caused flash flooding.

INDIANA, Southwest

(IN-Z081) GIBSON, (IN-Z082) PIKE, (IN-Z085) POSEY, (IN-Z086) VANDERBURGH, (IN-Z087) WARRICK, (IN-Z088) SPENCER	02/06/18 20:00 CST		0	Winter Weather
	02/07/18 04:00 CST		0	

A moist 500 mb shortwave trough tracked east from the Plains, causing a surface low pressure center to develop northeast from Texas to the central Appalachians. Widespread wintry precipitation occurred as colder air filtered south on the back side of the low. From one-tenth to two-tenths of an inch of ice glazed surfaces across southwest Indiana. Near the onset of precipitation, a period of sleet was reported. Most of the precipitation fell in the form of freezing rain. The automated observing station at the Evansville airport measured 0.18 inch of ice accretion. Most of the icing was on trees, power lines, and elevated surfaces during the precipitation. After the precipitation ended, temperatures fell through the 20's, causing icy spots to develop even on paved surfaces. Slick roads and motor vehicle accidents were common during the early morning hours. An ambulance was involved in a nine-vehicle crash that occurred in Vanderburgh County. Another crash involved an overturned snow plow. Area schools were closed.

SPENCER COUNTY --- 2.5 S PUEBLO [37.79, -87.12], 3.5 SSE PUEBLO [37.78, -87.10], 0.8 E GRANDVIEW [37.93, -86.97], 0.8 SE ROCK HILL [37.94, -87.02], 1.0 NW ROCKPORT [37.89, -87.06]	02/15/18 02:00 CST		80K	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Moderate flooding occurred along the Ohio River. The flood crest in neighboring Warrick County was the highest since the March, 1997 flood. Numerous roads were closed for days at a time, including at least 50 county roads. U.S. Route 231 north of Rockport was affected by high water, along with a few other state highways. The town of Grandview in Spencer County was hardest hit, where some residents evacuated.

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
WARRICK COUNTY --- NEWBURGH [37.95, -87.42], 0.7 SSE NEWBURGH [37.94, -87.42], 1.4 SSW YANKEETOWN [37.90, -87.31], 0.8 WSW YANKEETOWN [37.92, -87.31]				

02/15/18 02:00 CST	20K	Flood (due to Heavy Rain)
02/28/18 23:59 CST	0	Source: River/Stream Gage

Moderate flooding occurred along the Ohio River. At the river gage at Newburgh, the river crested at 50.12 feet on the 28th. Flood stage there is 38 feet. This was the highest flood crest at Newburgh since the flood of March, 1997. Just a few families were forced from their homes. Numerous roads were closed for days at a time, mostly county roads. The banks along Newburgh's scenic riverfront were damaged. Indiana Route 662 and Water Street in Newburgh were affected by high water. In eastern Warrick County, backwater from the Ohio River flooded Caney and Little Pigeon Creeks, flooding a few houses.

POSEY COUNTY --- MT VERNON [37.93, -87.90], 1.4 SW HOVEY [37.89, -87.95], 3.8 S HOVEY [37.85, -87.93], 1.4 ESE MT VERNON ARPT [37.92, -87.86]

02/20/18 02:00 CST	0	Flood (due to Heavy Rain)
02/28/18 23:59 CST	0	Source: River/Stream Gage

The Ohio River rose above flood stage around mid-month and continued rising through the end of the month. Numerous county roads near the river were flooded. An extensive acreage of farmland was inundated.

Several rounds of heavy rain sent the Ohio River above flood stage. February monthly precipitation was 4 to 7 inches above normal, with monthly totals of 8 to 10 inches common. This was greater than 200 percent of normal. This was the wettest February on record at Evansville, with a total of 9.24 inches. The river crested at the highest levels since the March, 1997 flood from Newburgh upriver to Spencer County. From Evansville downriver past the mouth of the Wabash River, the Ohio River continued rising through the end of the month.

Numerous small trees and limbs were blown down in town. A trained spotter estimated winds gusted to at least 60 mph.

VANDERBURGH COUNTY --- 1.0 E STRINGTOWN [38.03, -87.55], 1.1 WSW SMYTHE [37.99, -87.50], 1.5 SW EVANSVILLE [37.96, -87.57], 0.7 S EVANSVILLE SKYLN ARP [38.01, -87.58]

02/24/18 18:55 CST		5K	Flash Flood (due to Heavy Rain)
02/24/18 23:00 CST		0	Source: Public

A high water rescue was conducted due to a vehicle stuck in floodwaters on the north side of the Evansville metro area. Heavy rain caused a sinkhole to open up in the city of Evansville near the downtown area. Widespread rainfall rates around one-half inch per hour occurred on saturated ground.

GIBSON COUNTY --- 3.0 SW LYLE [38.34, -87.69], 1.9 W BALDWIN HGTS [38.32, -87.62], 0.2 S OWENSVILLE [38.27, -87.68], 2.2 NE JOHNSON [38.30, -87.72]

02/24/18 19:30 CST		0.10M	Flash Flood (due to Heavy Rain)
02/24/18 22:00 CST		0	Source: Trained Spotter

State Route 65 was washed out near the 25 mile marker north of Owensville. Some gravel roads in the area were washed out.

Very localized flash flooding and isolated minor wind damage occurred across southwest Indiana. A surface low pressure center tracked rapidly north-northeast from Arkansas to the upper Mississippi Valley, dragging a warm front north across southwest Indiana. Instability was adequate for thunderstorms. A very moist air mass resulted in excessive rainfall rates, which produced flash flooding due to the water-logged ground.

	02/09/18 06:00 CST	0	

A relatively stationary surface front set up just south of the Iowa-Missouri border and remained as such into the early morning hours before high pressure ushered the front southward. Above the surface, the 850 mb front was situated further north into Iowa, setting up good isentropic lift. Additionally, slantwise instability and a shortwave moving through the mid-upper level flow provided an additional boost to lift. In all snowfall fell across much of the state from just north of I-80 to the Minnesota border. The heaviest amounts resided roughly between the Highway 20 and 30 corridors where as much as around 10 inches fell.

 02/05/18 15:00 CST 0 Heavy Snow
 02/05/18 23:00 CST 0

A widespread snow event took place over Iowa and Illinois during the day through evening on the February, 5th, 2018. In most locations, this event produced a widespread 3 to 6 inch accumulation in about 12 hours, which combined with very light winds, to produce moderate impacts corresponding to a Winter Weather Advisory. A band of much heavier snow fell on the south edge of the widespread snow event, and was only 20 to 30 miles wide, but generally stretched across Iowa and Illinois along a line from near Grinnell, Iowa, to near Wapello, Iowa, to just north of Galesburg, Illinois. In that narrow axis, 7 to 10 inches of snow was observed.

02/19/18 03:00 CST	0	Winter Weather
02/20/18 04:00 CST	0	

With shallow cold air in place, warm advection associated with a weak wave of low pressure moving northeast from Kansas to Wisconsin produced a shield of light precipitation across northwest Iowa. While most precipitation was in the form of light freezing rain and freezing drizzle on February 19 which resulted in a 0.05 to 0.20 inch ice accumulation, a second round of precipitation early on February 20 brought a dusting of less than an inch of snow which coated the ice and produced hazardous travel conditions. For the two day period, school delays were common for those not already out for the Washington's Birthday holiday.

02/22/18 13:00 CST	0	Winter Weather
02/23/18 00:00 CST	0	

A second disturbance in three days traversed the deep western trough, and the associated jet streak produced another area of snowfall across northwest Iowa. Intensity waned for a short time in the afternoon and early evening, allowing a brief change to light freezing drizzle. Snowfall varied from 1 to 5 inches, with greatest amounts closer to the Minnesota border.

02/24/18 08:00 CST	0	Winter Weather
02/24/18 19:00 CST	0	

Ejection of the main upper level wave (which had already steered a pair of snow producing systems across the area during the prior week) brought yet another light to moderate snowfall over northwest Iowa, southeast South Dakota, northeast Nebraska and southwest Minnesota. While it generally snowed for five to eight hours at most across northwest Iowa, a majority of that time found visibility of a mile or less. Snowfall amounts 2 to 5 inches were common, with around an inch or less from the lower Missouri River valley eastward toward Storm Lake. Roads rapidly became snow-covered and hazardous due to the snowfall rate.

IOWA, Southwest

(IA-Z055) HARRISON, (IA-Z069) POTTAWATTAMIE

02/05/18 06:00 CST	0	Winter Weather
02/05/18 16:00 CST	0	

An upper level weather system moved across eastern Nebraska and produced a fairly narrow band of moderate snowfall on February of 1 to 5 inches of snow from Saline and Seward Counties in Nebraska to Harrison County and Pottawattamie Counties in Iowa. The heaviest amounts included 2.7 inches at 68th and Dodge in Omaha, 3 inches west of Oakland, 4 inches at Scribner, NE, and 5 inches southwest of Dunlap, IA.

(IA-Z055) HARRISON, (IA-Z090) FREMONT

02/22/18 00:00 CST	0	Winter Weather
02/22/18 08:00 CST	0	

Another upper level weather system produced light to moderate snowfall in eastern Nebraska and southwest Iowa. Snowfall amounts with this storm were generally 1-3 inches.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Although not a "major storm" by any means, this Sunday morning featured a quick-hitting burst of fluffy, wind-driven snow that roughly doubled accumulation expectations across portions of North Central Kansas, especially within Jewell and Smith counties where 2-4" was common. According to reports from official NWS cooperative observers, some of the highest totals in the local six-county area featured: 4.0" at Burr Oak, 3.0" at Jewell and Lebanon, and 2.6" at Smith Center. Although even these totals were relatively modest by Central Plains standards, this event packed somewhat of a punch given sustained north winds generally 20-25 MPH/gusts 30+ MPH, resulting in some drifting and at least brief visibility reductions to one-half mile or less.

As for timing, the vast majority of accumulating snow fell between 5AM-Noon, gradually ending from north-to-south. Forcing-wise, this event was driven by a classic case of pronounced mid-level frontogenesis, trailing well-behind a strong surface cold front that passed through during the preceding 24 hours. On the larger scale, a broad shortwave trough tracked southeast from the Northern Rockies/Dakotas into the Midwest over the course of Feb. 4th. Locally, this snow event was accompanied by a very cold airmass featuring surface temperatures mainly in the single digits to around 10 degrees F, and wind chill values ranging from -5 to -15 F.

(KS-Z005) PHILLIPS, (KS-Z006) SMITH, (KS-Z007) JEWELL, (KS-Z017) ROOKS, (KS-Z018) OSBORNE, (KS-Z019) MITCHELL				
	02/10/18 13:00 CST		0	Winter Weather
	02/11/18 00:30 CST		0	

On the afternoon and evening hours of Saturday the 10th, most of this six-county North Central Kansas area saw Advisory-level snow accumulation of 2-4", although north winds that only averaged 10-15 MPH kept impacts to a relative minimum. According to reports from official NWS cooperative observers, some of the highest totals featured: 4" in Logan, 3.2" at Smith Center and Lebanon, and 3" at Kirwin Dam.

As for timing, most of the area received the majority of snow between 3-10 PM. However, it started accumulating as early as 1 PM in the Phillips County area, and lingered until around midnight in and near Mitchell County. Aloft, a large-scale, broad trough was translating through the central United States along with a series of upper jet streaks. This setup yielded a concentrated swath of mid-level frontogenesis, which in turn promoted a fairly narrow, west-east oriented snow band that dropped the majority of accumulation. At the surface, this was certainly a "cold snow" with temperatures only averaging around 10 F. The relatively light winds were promoted by a nearby high pressure center in northeast Nebraska (roughly 1026 millibars).

KANSAS, Northeast

(KS-Z057) MIAMI, (KS-Z060) LINN, (KS-Z103) LEAVENWORTH, (KS-Z104) WYANDOTTE, (KS-Z105) JOHNSON				
	02/20/18 07:00 CST		0	Ice Storm
	02/20/18 13:00 CST		0	

Through the day on February 20, 2018 numerous accidents occurred as a result of widespread accumulating ice. Patchy freezing drizzle started as early as midnight on the morning of February 20, but the heavier rain fell through the morning and early afternoon hours. Numerous powerlines and trees sustained some damage from the accumulation of 1/8 to 1/3 inch of ice across a widespread area, including the Kansas City metro area.

KANSAS, Northwest

(KS-Z001) CHEYENNE				
	02/06/18 00:00 CST		0	Heavy Snow
	02/06/18 10:30 CST		0	

During the night heavy snowfall developed over Cheyenne County in Northwest Kansas, lasting into the morning. Snowfall rates of more than an inch an hour occurred.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Very little rainfall fell during the winter months with very little snowfall as well. This led to severe drought conditions creeping into portions of south central Kansas during the month of February 2018. The severe drought conditions worsened during the month, spreading north of Highway 50 and east to the Kansas Turnpike.

(KS-Z032) RUSSELL, (KS-Z033) LINCOLN, (KS-Z051) MCPHERSON, (KS-Z072) ALLEN, (KS-Z094) ELK, (KS-Z095) WILSON, (KS-Z096) NEOSHO	02/04/18 12:00 CST	0	0	Winter Weather
	02/04/18 16:44 CST	0	0	

A mid level disturbance moved across the plain on during the daytime hours on February 4th, 2018. As the system moved across across portions of central Kansas, a band of light snow moved southeast across portions of central Kansas into southeast Kansas. Snowfall amounts around one inch caused slippery conditions.

(KS-Z072) ALLEN, (KS-Z095) WILSON, (KS-Z099) MONTGOMERY, (KS-Z100) LABETTE	02/10/18 03:00 CST	0	0	Winter Weather
	02/10/18 21:50 CST	0	0	

A shallow cold front pushed south into southeast Kansas during the early morning hours of February 10th, 2018. As the front pushed south, low level moisture saturation increased enough for light freezing drizzle to develop as temperatures fell below freezing. The light freezing drizzle led to very slick roadways across most of the Flint Hills and southeast Kansas during the morning hours and again in the evening hours.

(KS-Z067) RENO, (KS-Z068) HARVEY, (KS-Z072) ALLEN, (KS-Z082) KINGMAN, (KS-Z083) SEDGWICK, (KS-Z095) WILSON, (KS-Z099) MONTGOMERY, (KS-Z100) LABETTE	02/19/18 22:15 CST	0	0	Winter Weather
	02/22/18 20:00 CST	0	0	

A strong upper-deck wave pushed a strong cold front across Kansas throughout the night and early morning of the 19th and 20th. The result was that widespread sleet and freezing rain occurred across all of the WFO Wichita County Warning Area with most of the adverse winter weather occurring on the 20th.

(KS-Z051) MCPHERSON, (KS-Z052) MARION, (KS-Z067) RENO, (KS-Z092) SUMNER	02/21/18 20:23 CST	0	0	Winter Weather
	02/22/18 12:00 CST	0	0	

(KS-Z068) HARVEY	02/22/18 08:08 CST	0	0	Sleet
	02/22/18 12:00 CST	0	0	

A large area of low pressure that covered the Southern Plains interacted with Canadian High Pressure to cause widespread light freezing rain and freezing drizzle that was occasionally mixed with sleet. Although most areas only received a light glazing, there were exceptions. Nearly 1/4 inch of glaze was reported in Marion (0.20 inch) while Newton received 1 inch of sleet.

KANSAS, Southwest

(KS-Z043) SCOTT, (KS-Z044) LANE, (KS-Z045) NESS, (KS-Z046) RUSH, (KS-Z063) FINNEY	02/05/18 22:00 CST	0	0	Winter Weather
	02/06/18 08:00 CST	0	0	

An upper level system moved across a moderately unstable atmosphere and produced widespread snow across much of the area. The heaviest amounts were north of highway 50 and along and west of highway 283.

(KS-Z078) FORD	02/18/18 20:55 CST	0	0	High Wind (MAX 52 kt)
	02/18/18 20:55 CST	0	0	

A cold front swept across the region and there were a few high wind gusts reported behind the front.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
KENTUCKY, Central				
WARREN COUNTY --- 1.2 N MASSEYS MILL [36.90, -86.38], 1.0 N MASSEYS MILL [36.89, -86.38], 1.0 N MASSEYS MILL [36.89, -86.38], 1.1 N MASSEYS MILL [36.90, -86.38]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

KY 2885 closed at mile 2.6 due to high water and flooding.

Repeated rounds of moderate to heavy rainfall across the entire Ohio River basin totaled between 8 to 9 inches across central Kentucky from February 15 to February 28. These totals were generally 7+ inches, or 200 to 400% of normal values for mid to late February. The large areal extent of the excessive rainfall led to significant rises on area rivers, including the Ohio River. The Ohio River along the Indiana and Kentucky border rose into Moderate to Major flood stage. This resulted in numerous flash flood reports across all of the central Kentucky counties including road closures, road washouts, water rescues, and 1 flood fatality in Simpson County. Kentucky Emergency Management reported damages to public infrastructure exceeding \$3.5 Million reported from nine central KY counties.

LOGAN COUNTY --- 0.9 ESE KEYSBURG [36.64, -87.00], 2.1 W SCHOCHOH [36.72, -86.82]

02/24/18 15:54 CST	1	0.80M	Tornado (EF2, L: 11.64 mi , W: 350 yd)
02/24/18 16:12 CST	1	0	Source: NWS Storm Survey

The National Weather Service conducted a storm damage survey in Logan county Kentucky. The damage moved in from Robertson County Tennessee near the end of McGee Road where two homes received extensive damage. The first home, a well built stone home had significant roof damage and the screened in porch was destroyed. The family pick up truck was tossed around 40 yards to the north. On the family cemetery plot several tombstones were knocked over and one headstone was destroyed. There were several outbuildings and 2 pole Barnes were destroyed on the property as well.

The second home experienced significant foundation damage and the roof was completely thrown off. The family pick up truck was thrown 250 yards and thrown down into a field. Insulation from the home was thrown down wind over 300 yards. The debris field from the two homes was thrown in a farmers field between 100 yards in a quarter mile down wind with several 2 x 4 and 2 x 10 and bricks being impaled into the ground. Winds were estimated between 120 and 130 mph.

The tornado then moved through several farmers fields doing extensive tree damage and fence damage. Power lines were down throughout this entire stretch.

The tornado then hit 901 Dot Road destroying 2 barns, moving heavy farm equipment, blowing out exterior walls and destroying the roof at the property. Tragically, a woman in the home was killed by falling debris. The family pet dog was found alive by rescuers underneath extensive rubble. Debris was thrown up to 500 yards and debris with a width of between 250 and 300 yards in a farmers field. Winds were estimated to be 135 mph at this location.

Next, the tornado hit a large family farm at 3604 Schley Road destroying the second story. Three farm silos that were empty or destroyed with the metal sheets being thrown over a quarter mile down wind. The tornado continued through farm fields destroying several trees and uprooting them.

The tornado became more elevated at the intersection of Mortimor Station Road and Mirriaheh Road. In this area trees we snapped, and several homes experienced shingle siding and roof damage. Winds were estimated to be 100 to 110 mph here.

As the tornado was lifting, it snapped some trees in the Schochoh community.

Direct Fatalities: F79PH

LOGAN COUNTY --- 1.3 ESE OAKVILLE [36.74, -86.85]

02/24/18 16:10 CST	25K	Thunderstorm Wind (EG 60 kt)
02/24/18 16:10 CST	0	Source: Trained Spotter

Spotters reported trees and power lines down in the area.

WARREN COUNTY --- 1.2 SW HAYS [37.02, -86.15], 0.5 NE HAYS [37.04, -86.12]

02/24/18 17:19 CST	0.25M	Tornado (EF1, L: 1.64 mi , W: 50 yd)
02/24/18 17:20 CST	0	Source: NWS Storm Survey

The tornado touched down near the intersection of Hays Ponds Rd and FH Roundtree Rd, destroying a small metal shed, overturning a trailer, flattening a fence, and causing minor roof damage to a home. The very narrow tornado - only 30 to 50 yards wide - continued northeast, uprooting trees and damaging outbuildings on neighboring property, including breaking out all of the windows of one building. The path continued northeast over open countryside, snapping tree limbs of several trees. It then tore the porch off the east side of a home on the south side of Highway 68-80, depositing debris into nearby woods.

Crossing 68-80, the tornado did its greatest damage, tearing a very large pine tree out of the ground and tossing it 100 feet over a home, spattering the front of the home with mud, ripping holes in the roof, and destroying the attached garage. Despite this intense damage, an open-sided outbuilding just 25 yards away suffered no visible damage. Continuing northeast, the tornado snapped several more trees before destroying two more outbuildings, scattering debris a quarter of a mile downwind. The tornado also damaged the roof of a home 100 feet east of the outbuildings, and did porch, deck, and roof damage to the neighboring residence, plastering the east side of the home with insulation. Crossing over Lewis Rd into Barren County, the roof of a sunroom was torn of the next home and an outbuilding destroyed. The tornado then moved over open countryside where drone footage showed it deposited the remainder of its debris. The total path length of the tornado in both counties was 1.9 miles.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
BARREN COUNTY --- 1.7 NW MERRY OAKS [37.04, -86.12], 1.6 NW MERRY OAKS [37.04, -86.12]

	02/24/18 21:15 CST		30K	Tornado (EF0, L: 2.93 mi , W: 300 yd)
	02/24/18 21:16 CST		0	Source: NWS Storm Survey

The first damage was observed off of old Greenville Road where several homes experience siding and roof damage. There were some snapped cedar trees and a couple of uprooted trees and one residence at the end of the road saw the windows moving back-and-forth and their ears completely popped as they were heading to the basement. Back to the southwest there was extensive tree damage all along Elamond Road. There were over 100 trees snapped, twisted, and uprooted. At 291 Elamond Road, part of the roof was peeled back with extensive siding damage. Winds were estimated to be between 100 and 110 mph but the width was between 150-300 yards wide.

LOGAN COUNTY --- 1.3 ENE DIAMOND SPGS [37.04, -86.95]

	02/24/18 21:21 CST		20K	Tornado (EF1, L: 1.40 mi , W: 100 yd)
	02/24/18 21:24 CST		0	Source: NWS Storm Survey

The National Weather Service conducted a storm damage survey in Butler County Kentucky. The survey was challenging due to closed roads due to high water and trees blocking some country roads. The damage began near Ewing Road where trees were snapped and twisted. This continued along Graveltown Road where more trees were twisted and snapped and couple were uprooted. Wind speeds averaged 90 mph with a width of 75 to 100 yards.

The tornado reached its peak intensity on Highway 106 where it did significant damage to a large barn. Wind speeds increased to 95 mph with a width of 100 yards. The tornado crossed Highway 106 uprooting 2 trees and then lifted 200 yards past the highway.

BUTLER COUNTY --- 2.1 N QUALITY [37.10, -86.85]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/24/18 21:50 CST		50K	Tornado (EF0, L: 1.68 mi , W: 100 yd)
	02/24/18 21:52 CST		0	Source: NWS Storm Survey

The National Weather Service conducted a storm survey across Simpson County. The tornado began just southwest of Lake Spring Road where a couple of trees were snapped or uprooted and a large 24 x 36 barn experienced extensive roof panel damage. Maximum winds were estimated at 80 mph with a width between 75 and 100 yards.

The tornado continued to cross farmland before striking another barn near the 31W intersection. The tornado threw metal sheeting from the barn in various directions with much of it suspended up in the trees. There were a couple twisted trees on both sides of Highway 31W. Maximum winds at this location were 75 mph with a width of 75 yards. The tornado lifted on the northeast side of the highway.

EDMONSON COUNTY --- 1.1 E ARTHUR [37.17, -86.18]

02/24/18 21:54 CST	0	Thunderstorm Wind (EG 55 kt)
02/24/18 21:54 CST	0	Source: Public

The public reported trees down on Highway 70 near Mammoth Cave National Park blocking both sides.

HANCOCK COUNTY --- 1.1 W HAWESVILLE [37.90, -86.77], 2.9 S HAWESVILLE [37.86, -86.74], 2.1 WNW SKILLMAN [37.88, -86.72], 0.8 NW HAWESVILLE [37.91, -86.76]

Fire department performed water rescues of residents stranded by flash flooding.

GREEN COUNTY --- 0.4 NE DONANSBURG [37.23, -85.62], 0.5 WSW WEBBS XRDS [37.25, -85.61]

02/24/18 22:33 CST	0.13M	Tornado (EF2, L: 1.30 mi , W: 100 yd)
02/24/18 22:35 CST	0	Source: NWS Storm Survey

An EF2 tornado touched down east of a row of trees, where it caused roof damage to 2 out of 3 barns. The tornado headed east, where it downed 2 other barns. One, on the left side of the path, was shifted south, and the other, to the right of the path, was shifted north. Tall grass along a fence line within the width of the tornado showed evidence of convergence. Also, a large tree on the north side of the path was snapped southward and drug 10 feet south. Heading east, several trees fell near a residence, but none damaged the house itself. A detached garage had its door blown outward. Next, a 2 story house had some roof damage and a porch on the lee side of the house had a column fly out down a field about 50 yards. Lastly, the tornado struck a barn and several trees fell. At this residence, a carport was thrown over the house and landed 100 yards east. A few other trees fell beyond this point before the tornado lifted.

JEFFERSON COUNTY --- RICHLAWN [38.25, -85.60], 0.4 S RICHLAWN [38.24, -85.60], 0.4 SE RICHLAWN [38.25, -85.59], 0.2 ENE RICHLAWN [38.25, -85.60]

Department of Highways reported Highway 3222 flooded. Numerous other roads in the county experienced flooding.

GARRARD COUNTY --- 0.4 S HACKLEY [37.62, -84.47], 0.3 S HACKLEY [37.63, -84.47]				
	02/25/18 00:50 EST		50K	Tornado (EF1, L: 0.10 mi , W: 100 yd)
	02/25/18 00:51 EST		0	Source: NWS Storm Survey

A small and brief EF1 tornado touched down near a ridge-top on Gillespie Pike east of Lancaster. The tornado first uprooted a tree, then came to a small shed, which it shifted off its foundation into a fence. The main property for that shed then had a loss of roof covering as well as impact from debris. Another outbuilding was overturned and slid about 10 feet. The tornado then crossed the street, where a brick veneer home lost part of its outer wall, as it was struck by debris, as well as some roof damage. A couple of columns on the porch fell. The adjoining garage lost its roof and doors were bent inward, falling onto the vehicles inside. A barn behind the house collapsed and another outbuilding completely lost its walls, but the contents were not disturbed. This is the point where the tornado lifted.

A stalled frontal boundary interacting with highly anomalous moisture from the Gulf of Mexico interacted with multiple weather systems that brought widespread heavy rainfall and severe thunderstorms to central Kentucky February 24 through the early morning hours February 25. A Flash Flood Emergency was issued for Jefferson County, KY including Louisville metro. There were over 50 water rescues alone in Jefferson County that evening. Widespread flash flooding occurred with most streams and creeks reaching record levels.

In addition, across south central Kentucky, 7 tornadoes developed along a warm front during the afternoon and evening hours. The strongest tornado was an EF-2 that tracked over 11 miles in Logan County and tragically killed a woman in her home. As a squall line moved through during the late evening and early morning hours, damaging winds occurred across central Kentucky.

KENTUCKY, Eastern

HARLAN COUNTY --- CRANKS [36.77, -83.17], 0.9 ENE FRESH MEADOWS [36.83, -83.36], 0.2 WSW BAILEY CREEK [36.88, -83.18], 1.7 SSE BLACK MTN [36.83, -83.14]

The Powell Edition Horse Stable was inundated by flood waters just off Highway 23 as you turn into Van Lear.

A prolonged period of light to moderate rain led to flooding across portions of eastern Kentucky, particularly southeastern Kentucky, beginning during the overnight hours of Friday, February 9 into Saturday, February 10, 2018. This occurred along and ahead of a slow moving frontal boundary as generally between 1.5 and 4.5 inches of rain fell across eastern Kentucky. The hardest hit area was Harlan County, where flooding occurred across much of the county as up to 5.5 inches of rain fell. A state of emergency was declared as the Cumberland River at Baxter reached major flood stage, prompting the closure of all of the city of Harlan's floodgates. The floodgate for the city of Pikeville was also closed as the Levisa Fork of the Big Sandy River breached 38 feet. Additional emergency declarations were made in Bell, Clay, Floyd, Knott, Knox, Leslie, Letcher, and Perry Counties, as well as for the city of Pineville, as numerous tributaries and the main stems of the Kentucky, Cumberland, and Levisa Fork of the Big Sandy Rivers exceeded bankfull.

Nearly 2,200 power outages were blamed on the widespread flooding, while thousands of boil water advisories were issued as shelters were opened to provide water. Several bridges were also inspected by engineers for structural integrity as the flood waters receded. A number of water rescues took place during the weekend and into Monday morning, including nearly half a dozen in and around Hazard. Hundreds of people were forced from their homes as river flooding along portions of the Kentucky and Cumberland Rivers continued well into the following week. In addition, the saturated ground led to several landslides and mudslides, including one along Kentucky Highway 74 near Middlesboro.

Maximum storm total rainfall amounts from various eastern Kentucky rain gauges (by county) were as follows:

February 10-11, 2018 Maximum Rainfall Totals (3 inches +)

The intersection of State Routes 1654 and 854 was closed due to flooding along Rush Creek and Williams Creek.

A low pressure system moved through the southern Ohio River Valley on the 6th, crossing the middle Ohio River Valley on the 7th. This system tapped into moisture from the Gulf of Mexico and brought a prolonged period of moderate to heavy rainfall. Many rain gauges across northeastern Kentucky reported 24 hour rainfall amounts of 1.25 to 1.5 inches, resulting in minor flooding.

LAWRENCE COUNTY --- 1.1 WNW WEBBVILLE [38.18, -82.89], 1.5 SW HOUCKVILLE [38.10, -82.87], 1.1 SSE LOUISA [38.11, -82.59], 1.1 W LOUISA [38.12, -82.62], 1.0 N CADMUS [38.18, -82.68]

Old Lick Creek spilled over its banks near Louisa, flooding Old Lick Creek Road where several vehicles became stranded in the high water. Dry Fork also flooded near Webbville, closing portions of Route 201.

A frontal system was draped across the central Appalachians on the 10th and 11th. As waves moved along the front, periods of heavy rainfall lead to some flooding across Northeast Kentucky. Rainfall amounts from the storm totaled 1 to 2 inches.

In the vicinity of Ashland, KY, the Ohio River surpassed moderate flood stage of 56.6 feet by about a tenth of a foot. The river rose above flood stage late on the 17th, and crested just below 57 feet just after noon on the 19th. The river returned below flood stage during the mid morning hours on the 21st. This caused flooding along Route 3 in Catlettsburg and of some low lying areas outside the flood wall in Ashland.				
GREENUP COUNTY --- 1.1 NNE TAYLOR [38.71, -82.92], 1.7 WSW GREENUP [38.57, -82.86], 2.1 W BELLEFONTE [38.48, -82.72], 1.1 S KENWOOD [38.50, -82.68], 0.8 W WURLAND [38.55, -82.78], 0.7 W GREENUP [38.58, -82.84], 0.5 SSE LLOYD [38.61, -82.87], 1.1 N LIMEVILLE [38.72, -82.88]

In the stretch of the Ohio River around the Greenup Lock, the river rose above flood stage of 54 feet just before noon on the 18th. The river crested in moderate flooding on the evening of the 19th at just over 57 feet. Moderate flood stage is 56 feet. The river dropped back below flood stage around 3 AM on the 21st. This caused flooding of low lying areas along the river.				
A wave of low pressure and surface front crossed from Kentucky and Tennessee into Virginia and West Virginia, producing heavy rainfall on the 16th. Generally 1 to 2 inches of rain fell, resulting in some minor creek and road flooding during the afternoon and evening. Eventually this water worked its way into the Ohio River, which also flooded.

	02/07/18 05:00 CST		0	

A moist 500 mb shortwave trough tracked east from the Plains, causing a surface low pressure center to develop northeast from Texas to the central Appalachians. Widespread wintry precipitation occurred as colder air filtered south on the back side of the low. Along and northwest of a line from Mayfield to Madisonville, one-tenth to one-quarter of an inch of ice glazed surfaces. Near the onset of precipitation, a period of sleet was reported. Most of the precipitation fell in the form of freezing rain. The automated observing station at the Paducah airport measured 0.23 inch of ice accretion. Most of the icing was on trees, power lines, and elevated surfaces during the precipitation. There were some small tree limbs broken in the Paducah area. After the precipitation ended, temperatures fell through the 20's, causing icy spots to develop even on paved surfaces. Slick bridges and overpasses were common during the early morning hours, along with many vehicle accidents. State police reported 46 accidents in northwest Kentucky, including 21 in Daviess County alone. Multiple crashes took place on Interstate 24 over the Cumberland River, which separates Lyon and Livingston Counties. Westbound traffic was backed up for several hours. A semi overturned on the icy bridge, and another semi crashed in the median just west of the bridge in Livingston County. At least one other passenger vehicle also crashed.

MUHLENBERG COUNTY --- PARADISE [37.27, -86.98], 0.5 WSW PARADISE [37.27, -86.99], 2.2 NW KNIGHTSBURG [37.24, -86.96], 2.0 SE PARADISE [37.25, -86.95]				
	02/11/18 16:00 CST		0	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Moderate flooding occurred on the Green River. At the river gage at Paradise, the river crested at 392.95 feet on the night of the 27th. Flood stage is 380 feet. Some local roads were closed, and considerable flooding of low-lying woods and fields occurred. The river remained above flood stage into March.

MCLEAN COUNTY --- CALHOUN [37.53, -87.27], 0.5 NE CALHOUN [37.53, -87.26], 0.9 ENE CALHOUN [37.53, -87.25], 0.9 ENE LIVERMORE [37.49, -87.12], 0.7 S LIVERMORE [37.47, -87.13]				
	02/15/18 05:00 CST		0	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Moderate flooding developed on the Green River. Flooding began in lower Calhoun. A large portion of Rumsey was flooded. Evacuation of homes became necessary. Thousands of acres were flooded in the Island, Rumsey, and Jewel City areas. The river continued rising into March.

Several rounds of heavy rain sent the Green River above flood stage. February monthly precipitation was 4 to 7 inches above normal, with monthly totals of 8 to 10 inches common. This was greater than 200 percent of normal. This was the 4th wettest February on record at Paducah, with a total of 8.55 inches.

Moderate flooding occurred along the Ohio River. At the Owensboro river gage, the river crested at 47.3 feet on the 28th. Flood stage there is 40 feet. Panther Creek flooded extensively due to backwater flooding from the Ohio River, which forced isolated evacuations of residents in the area of Pettit. Panther Creek covered parts of U.S. Highway 431 and surrounded a few major businesses such as a home improvement store. A downtown riverside park and parts of Water Street in Owensboro were flooded. Countywide, dozens of county roads and close to 20 state roads were closed.

Roads were covered by water in and around the Farmington community.				
Several rounds of widespread heavy rainfall tracked northeast across western Kentucky. These rounds of heavy rain produced localized flooding of roads, along with longer-term flooding along creeks and tributaries of the Ohio River. In the wake of a surface cold front, a persistent southwest flow of moist air aloft generated multiple rounds of widespread rain. Another cold front then moved east into western Kentucky on the morning of the 23rd. The three-day rainfall total at the Paducah National Weather Service office was 4.05 inches for the 21st, 22nd, and 23rd.

On Highway 307, a couple of small grain bins were destroyed. A trampoline and a playhouse were blown around. The damage occurred in very rural farm country.				
GRAVES COUNTY --- 1.5 SW BELL CITY [36.52, -88.52], 0.7 ENE BELL CITY [36.53, -88.49]				
	02/24/18 19:37 CST		0.10M	Tornado (EF1, L: 2.22 mi , W: 125 yd)
	02/24/18 19:40 CST		0	Source: NWS Storm Survey
This EF-1 tornado touched down about 1 mile southwest of Bell City and moved northeast across Highway 97 into Calloway County. The majority of the path and associated damage occurred in Calloway County. In the Graves County portion, a few barns were damaged or destroyed. A house sustained minor damage. Many dozens of trees, some very large, were snapped or uprooted. At least one eyewitness observed the tornado. A convergent damage pattern consisting of dozens of very large uprooted trees was visible from Kentucky Highway 97. Peak winds were estimated near 100 mph. The tornado path continued into Calloway County.				
MCCRACKEN COUNTY --- 1.8 NE ST JOHNS [36.99, -88.66], 2.3 SE LONE OAK [37.01, -88.64]				
	02/24/18 19:37 CST		85K	Tornado (EF1, L: 1.93 mi , W: 100 yd)
	02/24/18 19:41 CST		0	Source: NWS Storm Survey
This EF-1 tornado began just south of Kentucky Highway 999 and moved northeast for about two miles. A barn was destroyed. Debris from the barn damaged a nearby house and was embedded into a small trailer over 100 yards away. Some debris was buried up to three feet deep. Another outbuilding was destroyed. As the tornado crossed Highway 999, it damaged the roofs of two homes. A garage between the two homes had windows broken, and the west side of the building was pushed out. Numerous trees were snapped and uprooted along the path of the tornado. There was an eyewitness account of the tornado. Peak winds were estimated near 100 mph.				
CALLOWAY COUNTY --- 3.8 W TAYLORS STORE [36.53, -88.49], 0.7 WSW WISWELL [36.57, -88.39]				
	02/24/18 19:40 CST		0.35M	Tornado (EF1, L: 6.07 mi , W: 125 yd)
	02/24/18 19:46 CST		0	Source: NWS Storm Survey
This EF-1 tornado moved from Graves County into Calloway County near State Route 97. The tornado tracked across mainly rural farm country before lifting a few miles southwest of Murray. Most of the path and associated damage was in Calloway County. More than a half dozen barns were damaged or destroyed. A newly built, well-constructed barn was completely destroyed, and debris was strewn hundreds of yards. Two empty grain bins were blown over. Several homes were damaged, mainly due to fallen trees and blowing debris. Two semi trailers were overturned. Two mobile homes were blown from their foundations. Many dozens of trees, some very large, were snapped or uprooted. At least one eyewitness observed the tornado. Peak winds were estimated near 100 mph.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>This brief EF-1 tornado occurred in a very rural area of east central Graves County near the community of Golo. Near the touchdown location, some shingles were blown off a roof, and a few trees were uprooted or snapped. The tornado continued northeast and damaged trees along the path. The roof of a residence was uplifted briefly, and a window was blown in. Behind the residence, a mobile home with a wood base was lifted and rolled about 30 yards down a hill and was still intact. A small outbuilding was also destroyed on the property. Several large trees were uprooted or snapped on the property. The tornado track length was about one mile. Peak winds were estimated near 100 mph.</p>				
CALLOWAY COUNTY --- 1.6 S MURRAY [36.60, -88.32], 1.8 SE MURRAY [36.60, -88.30]				
	02/24/18 19:50 CST		0.55M	Tornado (EF1, L: 1.41 mi , W: 100 yd)
	02/24/18 19:52 CST		0	Source: NWS Storm Survey
<p>This EF-1 tornado crossed the southern part of the city of Murray, damaging about 40 homes. The tornado touched down several blocks west of Highway 641 and lifted on the east edge of the city at the Clarks River floodplain. Most of the damage consisted of roof damage, mainly shingle loss. Two homes were a total loss, with roof decking removed, windows blown out, and part of an exterior wall caved in due to projectile impacts. At least four businesses were damaged, with the majority of the roof removed from one. Dozens of trees were uprooted or broken. The mayor of Murray declared a state of emergency. Peak winds were estimated near 105 mph.</p>				
MARSHALL COUNTY --- 2.5 ENE HARVY [36.83, -88.38], 3.0 SSW BENTON [36.83, -88.37]

<p>The path of this EF-0 tornado started on the west side of the Pennyriple Parkway, then moved northeast across Lake Morris. At least four barns or sheds were damaged, primarily due to partial loss of roofing and siding. One camper trailer was overturned. Limbs were broken off hundreds of trees. Some trees were uprooted. There was one eyewitness account of the tornado near the start of the damage track. The track ended on the northwest side of Highway 107. Peak winds were estimated near 85 mph.</p>				
CHRISTIAN COUNTY --- 1.3 S HOPKINSVILLE [36.83, -87.48], 3.2 ENE HOPKINSVILLE ARPT [36.87, -87.40]				
	02/24/18 20:45 CST		6M	Tornado (EF2, L: 5.39 mi , W: 200 yd)
	02/24/18 20:51 CST	9	0	Source: NWS Storm Survey
<p>This EF-2 tornado touched down on the south side of Hopkinsville, just west of the junction of the Pennyriple Parkway and U.S. Highway 41. Three apartment buildings near the intersection of the Pennyriple Parkway and U.S. 41 were destroyed. The roof and most walls were blown down on the second story. Another apartment building was heavily damaged. All nine injuries occurred in the apartment complex, which consisted of two-and-a-half story buildings. One car was flipped and blown some distance. Two others were blown from their original positions, and several others were damaged. At least four retail buildings sustained major roof and siding damage, with windows and doors blown in or broken. Four barns were heavily damaged or flattened, and four houses sustained mainly minor roof damage. Two large commercial buildings were damaged, with one sustaining major roof and wall damage. Hundreds of trees were snapped or uprooted. The damage east of the city near Highways 68 and 80 was relatively minor, consisting of uprooted trees, destroyed barns, and shingle damage. Peak winds were estimated near 135 mph at the destroyed apartment complex on the south side of Hopkinsville.</p>

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	----------------------	------------------------	------------------------

Considerable street flooding was occurring in the city of Owensboro, with numerous manhole covers popped. Almost an inch of rain was measured at the Owensboro airport in an hour. In the far south part of the county, Route 554 was flooded just east of Todd Bridge Road.

UNION COUNTY --- 1.1 W HITESVILLE [37.75, -87.85], 0.2 W HITESVILLE [37.75, -87.83], 1.2 SW HITESVILLE [37.74, -87.84], 2.1 WSW HITESVILLE [37.74, -87.86]

	02/24/18 21:30 CST	1	0	Flash Flood (due to Heavy Rain)
	02/24/18 23:00 CST		0	Source: Broadcast Media

A water rescue was conducted near Mason Creek on Highway 359. A vehicle was swept off the roadway by the flash flood. Fire department dive team members recovered the body of the victim from the submerged car. The 77-year-old victim was a local farmer.

Direct Fatalities: M77VE

WEBSTER COUNTY --- 1.8 WNW LUZON [37.54, -87.76], 3.2 ESE HEARIN [37.52, -87.79], 2.2 SW LUZON [37.50, -87.75], 0.3 E LUZON [37.53, -87.72]

	02/24/18 22:38 CST		0	Flash Flood (due to Heavy Rain)
	02/25/18 01:00 CST		0	Source: Emergency Manager

At least two feet of water was over State Route 132 West between Dixon and Clay. The flooding was near State Route 857, close to Crab Orchard Creek.

An outbreak of severe thunderstorms and tornadoes occurred across western Kentucky. Most of the severe weather was along and south of a Paducah to Madisonville line. North of that line, serious flash flooding resulted in a fatality. A surface low pressure center tracked rapidly north-northeast from Arkansas to the upper Mississippi Valley, dragging a warm front north across western Kentucky. Instability was adequate for tornadoes and severe storms in the presence of very strong wind shear. A very moist air mass resulted in heavy rainfall, which produced localized flash flooding due to the water-logged ground. Locally 5 to 6 inches of rain had fallen over the previous week. Rainfall rates in these thunderstorms were locally one-half to one inch per hour.

Flooding occurred on several roads in the parish. Some roads that had water on them included: McCain Road, Johnston Road, John Crocker Road, Sugar Hill Road, Walker Road, Augustus Road, McLemore Road, Twiner Road, Collins Road, China Grove Road and Patty Road.

RICHLAND COUNTY --- 5.7 ESE NEW LIGHT [32.23, -91.70], 3.6 S BUCKNER [32.25, -91.93], 1.9 NE START [32.50, -91.85], 1.9 NE BEE BAYOU [32.50, -91.68]

02/22/18 16:30 CST	12K	Flood (due to Heavy Rain)
02/22/18 17:45 CST	0	Source: County Official

Flood waters receded but a few roads in the parish remained flooded.

A cold front stalled across the western portions of the ArkLaMiss region. As the front remained stalled, several disturbances moved along it and brought heavy rainfall to the region. This prolonged period of rain resulted in flash flooding across mainly the Delta and northeast Louisiana.

LOUISIANA, Northwest

(LA-Z001) CADDO, (LA-Z002) BOSSIER, (LA-Z003) WEBSTER, (LA-Z004) CLAIBORNE, (LA-Z005) LINCOLN, (LA-Z006) UNION, (LA-Z010) DE SOTO, (LA-Z011) RED RIVER, (LA-Z012) BIENVILLE, (LA-Z013) JACKSON, (LA-Z014) OUACHITA, (LA-Z018) NATCHITOCHEs, (LA-Z019) WINN, (LA-Z020) GRANT, (LA-Z021) CALDWELL, (LA-Z022) LA SALLE

02/01/18 00:00 CST	0	Drought
02/14/18 23:59 CST	0	

Severe (D2) drought conditions continued into February across much of North Louisiana (with the exception of Sabine Parish), although widespread 1-3 inches of rain fell across this area during the first week of the month which resulted in a one category improvement to moderate drought by the February 15th issuance of the U.S. Drought Monitor. A dry period developed and persisted during the second and third weeks of February, which maintained the drought conditions in place, given the continued agricultural and hydrological impacts. However, a prolonged period of heavy rainfall was observed across all of North Louisiana from February 21st to the 28th, with widespread rainfall amounts of 5-8+ inches recorded. This resulted in significant improvements to soil moisture as well as numerous reports of flash flooding across the area through the period. Excessive runoff resulted in flooding across numerous waterways across North Louisiana, including the Red River and Ouachita River basins. For the month of February, Shreveport observed its wettest February on record, with 9.21 inches having fallen. Monroe observed its second wettest February on record with 10.90 inches, falling just shy of the record with 11.04 inches in 1956. Thus, the moderate drought and abnormally dry conditions were removed by the end of the month from the U.S. Drought Monitor.

	02/22/18 23:45 CST		0	Flash Flood (due to Heavy Rain)
	02/23/18 00:15 CST		0	Source: Law Enforcement

Flooding was reported near the intersection of Highway 175 and Interstate 49.

An upper level low pressure system progressed east southeast from the Pacific Northwest into the Central and Southern Rockies on the morning of February 20th, reinforcing a cold front slowly southeast into East Texas and North Louisiana during the morning and afternoon hours on February 21st. A deep southwest flow aloft was present along and behind the front across the Southern Plains and Mississippi Valley, with weak embedded disturbances in the flow helping to enhance the development of scattered to numerous showers and thunderstorms along and behind the front on the 21st. A warm, moist, and weakly unstable air mass had already spread north ahead of the front into Northeast Texas, Southeast Oklahoma, Southwest Arkansas, and North Louisiana, with the southwest flow aloft tapping into the subtropical jet, thus transporting Pacific moisture northeast along and behind the front. Periods of moderate to at times, heavy rainfall fell along and behind the front across North Louisiana, and persisted through the early morning hours on the 23rd before diminishing. Widespread rainfall amounts of four to in excess of eight inches fell across North Louisiana from the morning hours of February 21st through the early morning hours on the 23rd. This resulted in periods of widespread flash flooding across much of North Louisiana during this 3 day period. In addition, isolated severe thunderstorms developed across the southeast sections of Northcentral Louisiana on February 21st within the warm sector along the front, which produced wind damage across Western La Salle Parish.

LOUISIANA, Southwest

(LA-Z052) VERMILION, (LA-Z073) WEST CAMERON

	02/02/18 07:00 CST		0	Astronomical Low Tide

Strong north winds behind a cold front pushed tides below normal.

VERNON COUNTY --- 0.7 S CRAVENS [30.96, -93.02], 2.4 N PITKIN [30.96, -92.94]

	02/07/18 03:48 CST		25K	Tornado (EF1, L: 4.96 mi , W: 350 yd)
	02/07/18 03:55 CST		0	Source: NWS Storm Survey

A tornado started west of Webster Marcile Road near the community of Cravens snapping several pine trees. It crossed Highway 10 north of Pitkin traveling east to Highway 458 and H Spears road where the most intense damage occurred. At this location numerous fallen trees were noted with one house receiving significant damage from trees. The last visible damage was noted along Fullerton Blacktop Road.

A line of thunderstorms moved across the region producing an isolated tornado at Pitkin in Vernon Parish.

	02/07/18 13:00 EST		0	Heavy Snow
	02/08/18 03:30 EST		0	

A fast moving intensifying low approached the region late on the 7th...crossed the Gulf of Maine overnight...then exited across the Maritimes. Snow developed through the afternoon of the 7th...then persisted into the early morning hours of the 8th. Warning criteria snow accumulations occurred through the evening of the 7th. Storm total snow accumulations generally ranged from 6 to 10 inches...with local totals up to around 12 inches across southeast Aroostook county. The snow transitioned to a wintry mix and rain along the Downeast coast and portions of interior Downeast Maine limiting snow accumulations there.

	02/07/18 15:00 EST		0	

Low pressure moved up the western side of the Appalachians Tuesday night, February 6th into the morning hours of Wednesday, February 7th. Initially the precipitation started as snow across the upper Ohio Valley. As the warm air surged north, precipitation type changed to a wintry mix of sleet and freezing rain. Locations in northern West Virginia and southwestern Pennsylvania changed over to rain with temperatures climbing into the upper 30s to lower 40s. Eastern Ohio, the northern West Virginia Panhandle, and locations from central Beaver county, northeast into southern Jefferson county, Pennsylvania switched over to freezing rain. Ice accumulation was around a quarter of an inch for these places. Farther north along the I-80 corridor and parts of interior southeastern Ohio, cold air

Emergency manager reported that Bethlehem Road was partially flooded near Combination Road.

Waves of heavy rain produced flooding on February 15th through the 16th. A line of thunderstorms developed along a lifting warm front, providing not only for enhancement in the rainfall totals, which ranged from 1-3 inches, but also attributed to shear that supported the development of a short-lived tornado over Uniontown, in Fayette county Pennsylvania. This was the first tornado in February since 1950 for the Pittsburgh Weather Service area of responsibility.

(MD-Z001) GARRETT

	02/17/18 14:00 EST	0	Winter Weather
	02/18/18 02:00 EST	0	

A quick moving low pressure brought snow to parts of southwestern Pennsylvania, northern West Virginia, and western Maryland starting the afternoon of the 17th and ending early in the morning on the 18th. The snow started fast with 1-2" per hour accumulations. With a recent warm up, accumulation was largely confined to grassy surfaces. The highest snowfall totals fell in the mountains of northern West Virginia, western Maryland, and the Laurels of southwestern Pennsylvania, where the snow ranged from 6-8 inches in the highest peaks.

Dozens of roads were closed due to flooding. The Saginaw River at Saginaw reached moderate flood stage, peaking at 27.50 feet on February 23rd at 430 PM EST.

A series of disturbances traveling along a slow-moving frontal boundary to the west of Southeast Michigan brought repeated rounds of heavy rainfall to the region over a 48 hour period. As the main low pressure system moved northeastward from the Central Plains to the Upper Peninsula of Michigan on Tuesday, February 20, record high moisture content for February standards moved into Southeast Michigan. Record warmth accompanying the moisture caused the snow pack to melt as repeated rounds of rain brought two to three inches of rain with isolated amounts up to 4 inches from Monday, February 19 through Wednesday, February 21. Several rivers experienced moderate flooding.

MICHIGAN, Extreme Southwest

(MI-Z077) BERRIEN, (MI-Z078) CASS, (MI-Z079) ST. JOSEPH, (MI-Z080) BRANCH, (MI-Z081) HILLSDALE

Extensive flooding occurred across the county with over 300 structures suffering varying degrees of damage from the flood waters. Several roads were closed across the area with some suffering partial washouts as rivers rose to record or near record levels. Initial damage estimates are at least 8 million dollars.

ST. JOSEPH COUNTY --- 1.2 N FACTORYVILLE [42.07, -85.30], 3.3 ESE FAWN RIVER [41.76, -85.29], 3.3 SSW MOTTVILLE [41.76, -85.78], 0.6 WSW MOTTVILLE [41.80, -85.76], 1.7 W CHAMBERLAINS [42.07, -85.76]				
	02/20/18 16:58 EST		0.68M	Flood (due to Heavy Rain / Snow Melt)
	02/20/18 16:59 EST		0	Source: Emergency Manager

Flooding occurred due to high water levels in many creeks, streams and rivers in the county. Several roads were closed for a period of time until flood waters receded. Over 60 structures were impacted by the flood waters as well as minor road damage. Damage of around 680,000 dollars was estimated.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A slow release of a snow pack, containing one to over two inches of water, occurred in the days leading to the event which started the process of river rises in many areas. Low pressure tracked from northwest Iowa into northern Lower Michigan, which ushered in a rapid warmup and equally rapid release of any remaining water in the snowpack. Several rounds of rain occurred between the 19th and 21st of February across the region, fed by record high precipitable water levels (by February standards) in the 1.3 to 1.5 inch range. A swath of four to six inches of rain fell northwest of a Sturgis to Coldwater line. All these factors combined to cause extensive flooding in the St Joseph river basin, with a record crest occurring at Niles. These water levels forced evacuations of homes and closure of businesses and schools, rescues from those driving into flood waters and an overwhelming of water treatment facilities in a few communities. Preliminary damage estimates across Berrien, Cass and St Joseph counties was in excess of nine million dollars.

MICHIGAN, North

(MI-Z016) EMMET, (MI-Z017) CHEBOYGAN

02/20/18 01:00 EST	0	Ice Storm
02/20/18 12:00 EST	0	

Deep and moist southwest flow, well ahead of an approaching low pressure system, resulted in a wintry mix over eastern upper and far northern lower Michigan. Freezing rain was focused over the tip of northern lower Michigan, with measured ice accumulations just above a quarter of an inch at Pellston, and reports of similar ice amounts near Aloha in Cheboygan County.

02/24/18 11:30 CST	0	Winter Storm
02/25/18 00:00 CST	0	

The morning of Saturday, February 24th, a storm system moved out of the Plains, and into the Upper Midwest.

Several waves of snow, mixed with sleet and freezing drizzle at times in south central, and east central Minnesota, moved across Minnesota, and into western Wisconsin during the day Saturday. The first wave of light snow moved across southwest, west central, and central Minnesota during the morning, but most areas only received a light dusting with some sleet noted along the Iowa border. By the afternoon, the snow had spread across the rest of southern Minnesota, and into western Wisconsin.

During the mid to late afternoon, the snowfall became heavier in Minnesota, and pivoted to the east-northeast before tapering off during the evening in eastern Minnesota.

Snowfall amounts varied across central, and southern Minnesota, with the heavier bands from near New Ulm in south central Minnesota, northeast to the western suburbs of the Twin Cities, and into west central Wisconsin around Osceola, and St. Croix Falls. Farther to the south and southeast across Minnesota, especially along the Iowa border, the mixture of sleet and freezing rain during the day, kept snowfall amounts much lower than expected. Most areas that had a mixture of sleet and freezing rain received between 3 and 5 inches of snow. Elsewhere, more snow led to higher totals.

Another area of heavier snowfall occurred from Alexandria, eastward into Todd and Morrison Counties of central Minnesota during the afternoon, and early evening.

Some of the heavier totals included:

- 9.0 Inches near Princeton and Orrock in Sherburne County.
- 9.0 Inches near St. Francis in Anoka County.
- 9.0 Inches near Alexandria in Douglas County.
- 8.0 Inches near New Germany & Norwood/Young America in Carver County.
- 8.0 Inches near Cambridge in Isanti County.
- 8.0 Inches near Hutchinson in McLeod County.
- 8.0 Inches near Gaylord in Sibley County.

02/03/18 18:00 CST	0			

A vehicle lost control on ice-covered Interstate 35 and rolled in the median near Cloquet about mid morning. A male who was not wearing a seat belt was transported to an area hospital where he succumbed to his injuries a few days later. Another crash occurred later in the afternoon around 4:15 PM when a vehicle lost control and entered the median and rolled multiple times. A passenger in the vehicle was killed while another sustained life-threatening injuries. The driver of this vehicle did not report any injuries.

A winter weather advisory was in effect during the crashes for a few inches of snowfall and slick roadways.

02/18/18 06:00 CST		0	Heavy Snow
02/19/18 00:00 CST		0	

A band of snow developed over northeast Minnesota. The main snow area was along and north of U.S. Highway 2 in Minnesota where amounts ranged from 6 to 15 inches. The highest amounts were from northern Cass County across much of Itasca, central St. Louis County and all of the Arrowhead region.

(MN-Z037) SOUTHERN ST. LOUIS / CARLTON, (MN-Z038) PINE

02/19/18 08:00 CST		0	Heavy Snow
02/20/18 09:00 CST		0	

A car accident occurred during a snow storm along Highway 61 near Brighton Beach in Duluth. The vehicle crossed the center line and crashed into an oncoming vehicle resulting in a the driver one of the vehicles succumbing to her injuries. Roads were snow-covered and slippery at the time with snow falling. Snowfall around that time was about 2 inches.

Heavy snowfall bands persisted through the day dropping over 6 to 10 inches across portions of Carlton, Pine, and Southern St. Louis counties.

(MN-Z037) SOUTHERN ST. LOUIS / CARLTON, (MN-Z038) PINE

02/19/18 08:00 CST		0	Heavy Snow
02/20/18 09:00 CST		0	

A batch of snow developed in the morning of the 19th. Snow continued to fall into the evening, ending Tuesday morning. This snow area was mainly from the head of Lake Superior, including Duluth, and south across Moose Lake and Sturgeon Lake to as far south as Bruno. Snowfall ranged from 9 to 11 inches. A car crash during the snow storm near Brighton Beach in Duluth claimed to life of a woman driver.

(MN-Z019) CENTRAL ST. LOUIS, (MN-Z033) SOUTHERN CASS, (MN-Z034) CROW WING, (MN-Z035) NORTHERN AITKIN, (MN-Z037) SOUTHERN ST. LOUIS / CARLTON

02/22/18 18:00 CST		0	Heavy Snow
02/23/18 09:00 CST		0	

Snow fell across the entire forecast area. Snow began in the evening of the 22nd and ended around sunrise on the 23rd. Highest snowfall amounts ranged from 6 to about 11 inches from Crow Wing County, through northern Aitkin County to central and southern St. County. Much of Crow Wing County had 7.5 to 8 inches of snow in a less than 12 hours.

(MN-Z025) NORTHERN CASS

02/24/18 08:00 CST		0	Cold/Wind Chill
02/25/18 08:50 CST		0	

On the morning of the 25th, the Cass County Sheriff's Office received a report of an unresponsive male in a fish house on Leech Lake. The 21 year old male was pronounced deceased upon arrival at the hospital. The medical examiner ruled cause of death as accidental carbon monoxide poisoning. Overnight low temperatures were in the upper teens.

LOUIS / CARLTON, (MN-Z038) PINE

02/24/18 16:00 CST		0	Heavy Snow
02/25/18 09:00 CST		0	

Heavy snow began across the Northland during the late afternoon and early evening. By midnight some areas had already received close to 6 inches of snow, with more falling overnight. The western end of Lake Superior and the north shore, including the Arrowhead region, received the most snow. Finland had 14 inches of snow, with Duluth at nearly 8 inches and Island Lake at 8.5 inches. Portions along Interstate-35 received up to 8 inches of snow. Some areas received less than 6 inches of snow but the snowfall rate and strong winds made travel conditions difficult. The average wind speed at Duluth was 26 mph with a peak wind of 36 mph, all from the east.

Surface low pressure tracked across South Dakota on the morning of February 18th, then moved to just north of the Twin Cities in Minnesota by the early evening. An area of snow over north central South Dakota in the early morning hours spread east-northeast, eventually setting up in an east-west band from New Rockford to Hillsboro to Bemidji. There were intense snow rates within this band through the remainder of the morning into the afternoon. Snow totals ranged from 6 to 15 inches along this corridor.

MINNESOTA, Southeast

(MN-Z079) WABASHA, (MN-Z086) DODGE, (MN-Z087) OLMSTED, (MN-Z088) WINONA, (MN-Z094) MOWER, (MN-Z095) FILLMORE, (MN-Z096) HOUSTON				
	02/19/18 07:10 CST		5K	Winter Weather
	02/20/18 06:10 CST		0	

A prolonged period of freezing drizzle and freezing rain on February 19th and 20th produced a coating of ice on untreated surfaces across southeast Minnesota. The precipitation fell with temperatures below freezing as a slow moving area of low pressure moved from the Missouri River Valley toward the Great Lakes. Ice accumulations up to a quarter of an inch were reported on Mower County roads and most schools were either closed or delayed on the 20th.

MINNESOTA, Southwest

	02/04/18 00:00 CST		0	Cold/Wind Chill
	02/04/18 12:00 CST		0	

Arctic air surged southward early on February 4th on gusty northerly winds of 20 to 35 mph. Dangerous wind chills reached -25 to -35.

(MN-Z089) NOBLES, (MN-Z090) JACKSON, (MN-Z098) ROCK				
	02/05/18 06:00 CST		0	Winter Weather
	02/05/18 13:00 CST		0	

A disturbance rotating around a large Canadian upper vortex brought a period of enhanced frontogenetic forcing through the Missouri River valley and eastward across northwest Iowa and far southern Minnesota. Snowfall averaged from 2 to 5 inches.

(MN-Z080) MURRAY, (MN-Z081) COTTONWOOD, (MN-Z089) NOBLES, (MN-Z090) JACKSON, (MN-Z097) PIPESTONE, (MN-Z098) ROCK				
	02/08/18 16:00 CST		0	Winter Weather
	02/09/18 01:00 CST		0	

Another in a series of Alberta clipper systems moving across the plains left behind a swath of light to moderate snow accumulations across southwest Minnesota. Much of the area received from 2 to 4 inches snowfall, while wind chills dropped below zero by the end of the time of snowfall.

(MN-Z080) MURRAY, (MN-Z081) COTTONWOOD, (MN-Z089) NOBLES, (MN-Z090) JACKSON, (MN-Z098) ROCK				
	02/19/18 06:00 CST		0	Winter Weather
	02/20/18 07:00 CST		0	

With shallow cold air in place, warm advection associated with a weak wave of low pressure moving northeast from Kansas to Wisconsin produced a shield of light precipitation across southwest Minnesota. While most precipitation was a mix of light freezing rain, freezing drizzle and light snow on February 19 which resulted in a 0.05 to 0.15 inch ice accumulation, a second round of precipitation early on February 20 brought a dusting of less than an inch of snow which coated the ice and produced hazardous travel conditions. For the two day period, school delays were common for those not already out for the Washington's Birthday holiday.

(MN-Z071) LINCOLN, (MN-Z072) LYON, (MN-Z097) PIPESTONE

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/19/18 09:00 CST		0	Winter Weather
	02/20/18 07:00 CST		0	

With shallow cold air in place, warm advection associated with a weak wave of low pressure moving northeast from Kansas to Wisconsin produced a shield of light precipitation across northwest Iowa. Most precipitation was in the form of snowfall, which totaled from 2 to 4 inches. Greatest accumulations were measured at Pipestone, Tracy and Marshall (4.0 inches).

(MN-Z080) MURRAY, (MN-Z081) COTTONWOOD, (MN-Z089) NOBLES, (MN-Z090) JACKSON, (MN-Z098) ROCK	02/22/18 13:00 CST		0	Winter Weather
	02/23/18 01:00 CST		0	

A second disturbance in three days traversed the deep western trough, and the associated jet streak produced another area of widespread light to moderate snowfall across southwest Minnesota. Snowfall varied from 3 to 5 inches.

(MN-Z071) LINCOLN, (MN-Z072) LYON, (MN-Z097) PIPESTONE	02/22/18 13:00 CST		0	Winter Storm
	02/23/18 01:00 CST		0	

A second disturbance in three days traversed the deep western trough, and the associated jet streak produced another area of snowfall across southwest Minnesota. A narrow band of heavier snowfall produced accumulations from 4 to 7 inches.

(MN-Z071) LINCOLN, (MN-Z072) LYON, (MN-Z080) MURRAY, (MN-Z081) COTTONWOOD, (MN-Z089) NOBLES, (MN-Z090) JACKSON, (MN-Z097) PIPESTONE, (MN-Z098) ROCK	02/24/18 09:00 CST		0	Winter Weather
	02/24/18 20:00 CST		0	

Ejection of the main upper level wave (which had already steered a pair of snow producing systems across the area during the prior week) brought yet another light to moderate snowfall over northwest Iowa, southeast South Dakota, northeast Nebraska and southwest Minnesota. While it generally snowed for five to eight hours at most across southwest Minnesota, a majority of that time found visibility of a mile or less. Snowfall amounts 3 to 5 inches were common, and as a result of the snowfall rate, roads rapidly became snow-covered and hazardous.

LAUDERDALE COUNTY --- 5.2 NNW MEEHAN [32.40, -88.91], 1.0 N NELLIEBURG [32.41, -88.78]

	02/07/18 04:15 CST		0.20M	Tornado (EF1, L: 7.92 mi , W: 300 yd)
	02/07/18 04:26 CST		0	Source: NWS Storm Survey

This tornado touched down along Bogue Statinea Road and tracked east northeast for roughly 8 miles. The initial damage was a few uprooted and snapped pine trees from touchdown and as it crossed Bogue Flower Road. The intensity increased as the tornado crossed some private property just west of the intersection of Bogue Statinea Road and Suqualena Meehan Road. Here part of a roof of a metal barn was removed with a large metal truss thrown onto a framed house. Roof damage was sustained to this home along with portions of the shed heavily damaged. Heavier tree damage was also noted here as the tornado crossed a pasture. The most intense damage occurred in and around the intersection of Bogue Statinea Road and Suqualena Meehan Road. Here numerous trees were snapped and uprooted along with several power lines and poles downed. A travel trailer was rolled and small shed was destroyed. A few other structures sustained minor damage here as well. The tornado continued to the east northeast and weakened a fair amount as it crossed Suqualena Graham and Woods Roads. In the Tanglewood neighborhood, minor damage occurred from a few downed trees and snapped limbs to homes and a trampoline was thrown. The tornado dissipated just at Highway 19. This tornado was rated EF1 with maximum winds near 110 mph. Max width was 300 yards.

LAUDERDALE COUNTY --- 2.4 NNE COMPLETE [32.41, -88.71]

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Flood waters were slow to recede which resulted in continued flooding on some roads in Greenville and around the county.

A cold front stalled across the western portions of the ArkLaMiss region. Ahead of this, a few storms produced hail and damaging winds. As the front remained stalled, several disturbances moved along it and brought heavy rainfall to the region. This prolonged period of rain resulted in flash flooding across mainly the Delta.

	02/20/18 07:00 CST		0	Ice Storm
	02/20/18 13:00 CST		0	

Through the day on February 20, 2018 numerous accidents occurred as a result of widespread accumulating ice. Patchy freezing drizzle started as early as midnight on the morning of February 20, but the heavier rain fell through the morning and early afternoon hours. Numerous powerlines and trees sustained some damage from the accumulation of 1/8 to 1/3 inch of ice across a widespread area, including the Kansas City metro area.

MISSOURI, Southeast

(MO-Z076) PERRY, (MO-Z086) BOLLINGER, (MO-Z087) CAPE GIRARDEAU, (MO-Z100) WAYNE, (MO-Z107) CARTER, (MO-Z108) RIPLEY, (MO-Z109) BUTLER, (MO-Z110) STODDARD, (MO-Z111) SCOTT, (MO-Z112) MISSISSIPPI, (MO-Z114) NEW MADRID				
	02/06/18 17:00 CST		0	Winter Weather
	02/07/18 03:00 CST		0	

A moist 500 mb shortwave trough tracked east from the Plains, causing a surface low pressure center to develop northeast from Texas to the central Appalachians. Widespread wintry precipitation occurred as colder air filtered south on the back side of the low. Around one-tenth of an inch of ice glazed surfaces across southeast Missouri. Near the onset of precipitation, a period of sleet was reported. Most of the precipitation fell in the form of freezing rain. Thunder and lightning accompanied the wintry precipitation during the evening hours. Automated observing stations at the Cape Girardeau and Poplar Bluff airports measured 0.13 and 0.08 inch of ice accretion, respectively. Most of the icing was on trees, power lines, and elevated surfaces during the precipitation. After the precipitation ended, temperatures fell through the 20's, causing icy spots to develop even on paved surfaces. On Interstate 57 northbound at the Mississippi River bridge, a vehicle slid into the bridge railing. One person was moderately injured. On U.S. Highway 60 in Stoddard County, one person was moderately injured when her vehicle overturned on the ice.

(MO-Z076) PERRY, (MO-Z086) BOLLINGER, (MO-Z087) CAPE GIRARDEAU, (MO-Z100) WAYNE, (MO-Z107) CARTER, (MO-Z108) RIPLEY, (MO-Z109) BUTLER, (MO-Z110) STODDARD, (MO-Z111) SCOTT				
	02/11/18 02:00 CST		0	Winter Weather
	02/11/18 08:00 CST		0	

Over most of southeast Missouri, a mixture of freezing rain and sleet caused a light glaze of ice. Most of the icing was on elevated objects such as cars and decks. Some secondary roads and bridges were icy, resulting in several accidents. The most icing was reported north and west of Cape Girardeau, including Perry County. Several vehicles slid off secondary roads in Carter and Perry Counties. Main highways were treated with salt and mostly wet. The mixed precipitation was caused by a surface low pressure center that tracked northeast from Louisiana to the middle Ohio Valley.

(MO-Z076) PERRY, (MO-Z086) BOLLINGER, (MO-Z087) CAPE GIRARDEAU, (MO-Z100) WAYNE, (MO-Z107) CARTER, (MO-Z108) RIPLEY, (MO-Z109) BUTLER, (MO-Z110) STODDARD, (MO-Z111) SCOTT, (MO-Z112) MISSISSIPPI, (MO-Z114) NEW MADRID				
	02/15/18 11:00 CST		11K	Strong Wind (MAX 42 kt)
	02/15/18 19:00 CST		0	

Strong southwest winds occurred ahead of a cold front that was dropping southward across Missouri and Illinois. Peak wind gusts were mostly from 40 to 50 mph. The highest measured gust at any airport sites was 48 mph at the Cape Girardeau airport.

(MO-Z076) PERRY, (MO-Z086) BOLLINGER, (MO-Z087) CAPE GIRARDEAU, (MO-Z100) WAYNE, (MO-Z107) CARTER, (MO-Z108) RIPLEY, (MO-Z109) BUTLER, (MO-Z110) STODDARD, (MO-Z111) SCOTT, (MO-Z112) MISSISSIPPI, (MO-Z114) NEW MADRID				
	02/17/18 22:00 CST		0	Dense Fog
	02/18/18 09:00 CST		0	

The combination of clear skies, light winds, and moist ground from rainfall on the 16th resulted in widespread dense fog. High pressure was centered directly over the lower Ohio Valley.

(MO-Z076) PERRY, (MO-Z086) BOLLINGER, (MO-Z087) CAPE GIRARDEAU, (MO-Z100) WAYNE, (MO-Z109) BUTLER, (MO-Z110) STODDARD, (MO-Z111) SCOTT				
	02/20/18 09:00 CST		7K	Strong Wind (MAX 41 kt)
	02/20/18 15:00 CST		0	

Strong gusty winds occurred ahead of a cold front that trailed southwest from a surface low pressure center over lower Michigan. From Poplar Bluff north and northeast to Cape Girardeau and Perryville, south to southwest winds gusted up to near 45 mph. The peak wind gusts were measured at 47 mph at the Cape Girardeau airport and 44 mph at Poplar Bluff.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
CAPE GIRARDEAU COUNTY --- (CGI)CAPE GIRARDEAU [37.23, -89.57]				
	02/20/18 22:59 CST		0	Thunderstorm Wind (MG 50 kt)
	02/20/18 22:59 CST		0	Source: ASOS
The automated observing system at the Cape Girardeau airport measured a wind gust to 58 mph.				
A line of developing showers and thunderstorms moved east across southeast Missouri. Locally strong winds accompanied this line of storms, including a 58 mph gust at the Cape Girardeau airport. The line of convection occurred along a cold front that trailed southwest from a surface low pressure center over lower Michigan.				
WAYNE COUNTY --- 0.7 WNW GREENVILLE [37.13, -90.48], 1.3 NE GREENVILLE [37.14, -90.46], 3.2 NNE SILVA [37.21, -90.49], 2.6 N SILVA [37.21, -90.53]

	02/24/18 16:49 CST		25K	Flash Flood (due to Heavy Rain)
	02/24/18 20:00 CST		0	Source: Law Enforcement
Flash flooding of streets occurred in Poplar Bluff, where at least a couple of water rescues were conducted. Flooding of Pike Creek resulted in an impassable secondary road just west of Poplar Bluff. Water was over County Road 569 near Rombauer. Near Hendrickson, the intersection of two back roads in the Mark Twain National Forest was completely underwater. Parts of County Road 523 were washing out rapidly. A thunderstorm produced nearly an inch of rain in 45 minutes at the Poplar Bluff airport. This heavy rain occurred after nearly 5 inches of rain had fallen in the previous four days.				
NEW MADRID COUNTY --- 2.6 SW BROADWATER [36.56, -89.96], 2.3 SW BROADWATER [36.56, -89.95]				
	02/24/18 18:06 CST		2K	Tornado (EF0, L: 0.34 mi , W: 50 yd)
	02/24/18 18:07 CST		0	Source: NWS Storm Survey
A long-track tornado crossed from Dunklin County into New Madrid County near the city of Malden. The tornado, which began in northeast Arkansas, only lasted a minute or two in New Madrid County before dissipating. The tornado crossed the intersection of Highway 25 and U.S. Highway 62 just east of Malden with peak winds less than 60 mph. Minimal damage was observed in New Madrid County.

	02/28/18 23:59 CST		0	Source: River/Stream Gage
Minor flooding occurred on the Mississippi River. The Mississippi River backed up into several creeks and a diversion channel. Low-lying agricultural land was flooded. The river remained above flood stage into March.				
RIPLEY COUNTY --- DONIPHAN [36.62, -90.82], 3.4 WNW HILL TOP [36.68, -90.85], 3.5 ENE BRIAR [36.67, -90.91], 1.5 WSW DONIPHAN [36.61, -90.84]				
	02/26/18 10:00 CST		0	Flood (due to Heavy Rain)
	02/26/18 18:00 CST		0	Source: River/Stream Gage
Minor flooding occurred on the Current River. Some low-lying woods and fields near the river were inundated.				
<p>Localized flash flooding and a couple of tornadoes occurred across southeast Missouri. A narrow swath of torrential rainfall occurred from Cape Girardeau southwest across Poplar Bluff, where water rescues were conducted. A surface low pressure center tracked rapidly north-northeast from Arkansas to the upper Mississippi Valley, dragging a warm front north across southeast Missouri. Instability was adequate for a couple tornadoes in the presence of very strong wind shear. A very moist air mass resulted in heavy rainfall, which produced localized flash flooding due to the water-logged ground. Most rivers experienced minor flooding.</p>				
MISSOURI, Southwest				
(MO-Z081) LACLEDE, (MO-Z091) WEBSTER				
	02/04/18 13:00 CST		0	Winter Weather
	02/04/18 18:00 CST		0	
A band of snow dropped southward across southern Missouri. A brief period of moderate snow within the band dropped visibilities to near 1/2 mile at times. This band of snow was accompanied by a surge of colder air which dropped temperatures.

There was a water rescue at a low water crossing on Lawrence County Road 2137 east of Lawrence County Road 2140 near Hoberg.

Heavy rainfall over several days caused minor flooding across the Missouri Ozarks. Between four and eight inches of rainfall fell over the course of about a week.

MONTANA, Central

(MT-Z014) SOUTHERN LEWIS AND CLARK				
	02/02/18 21:51 MST		0	High Wind (MAX 51 kt)
	02/02/18 22:13 MST		0	

Several weak disturbances sent southward surging cold fronts across the area, with isolated areas of strong winds along the Divide in Central Montana.

(MT-Z011) HILL, (MT-Z047) BLAINE				
	02/03/18 11:00 MST		0	Heavy Snow
	02/04/18 00:00 MST		0	

This longer-duration winter event was really made up of 3 separate systems. The first wave brought snow and mixed precipitation to Central Montana on Friday, February 2. After a lull, another round of mostly snow impacted Central Montana on Saturday, February 3. The third, and final, wave brought snow and mixed precipitation to Central and Southwest Montana Sunday-Monday, February 4-5.

(MT-Z009) NORTH ROCKY MOUNTAIN FRONT, (MT-Z011) HILL, (MT-Z012) CASCADE, (MT-Z013) CHOUTEAU, (MT-Z014) SOUTHERN LEWIS AND CLARK, (MT-Z047) BLAINE, (MT-Z048) SOUTHERN ROCKY MOUNTAIN FRONT, (MT-Z049) EASTERN TETON, (MT-Z050) JUDITH BASIN, (MT-Z051) FERGUS				
	02/08/18 06:40 MST		0	Winter Storm
	02/09/18 09:00 MST		0	

During the 7th through 9th, North-Central and Southwest Montana resided underneath northwesterly flow aloft associated with the polar front jet stream. In addition, multiple disturbances embedded within this flow interacted with a frontal boundary that wavered over the area from southwest to northeast and vice versa. The resulting lift, combined with abundant moisture in the low- to mid-level atmosphere, contributed to the formation of periods of snow over North-Central and Southwest Montana. In addition, it is believed mesoscale bands of heavy snow that affected portions of North-Central Montana on the 8th into early morning of the 9th were tied to frontogenesis in the 850 mb to 700 mb layer.

(MT-Z014) SOUTHERN LEWIS AND CLARK				
	02/08/18 15:28 MST		0	High Wind (MAX 51 kt)
	02/08/18 15:28 MST		0	

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Passing disturbance caused strong downsloping winds across a large portion of Northern and Central Montana.

02/13/18 07:23 MST	0	High Wind (MAX 63 kt)
02/13/18 23:07 MST	0	

A strong storm system created blizzard conditions across northern Montana, with extreme winds across higher terrain causing significant impacts.

(MT-Z009) NORTH ROCKY MOUNTAIN FRONT

02/13/18 16:20 MST	0	Blizzard
02/13/18 16:20 MST	0	

Low- to mid-level winds (i.e. 700 mb winds) increased and became more westerly across the Rocky Mountain Front during the evening of February 12th through much of the 13th as high pressure ridging over western Montana and the Pacific Northwest was broken-down by a series of weather disturbances. At the surface, a trough east of the Rockies developed and deepened. A tightening surface pressure gradient accompanying this strengthening trough yielded strong and gusty southwesterly to westerly surface winds along the Rocky Mountain Front and most of Glacier County. These strong winds, combined with a significant and loose snow pack, allowed a ground blizzard to affect much of Glacier County.

(MT-Z009) NORTH ROCKY MOUNTAIN FRONT, (MT-Z011) HILL, (MT-Z012) CASCADE, (MT-Z013) CHOUTEAU, (MT-Z014) SOUTHERN LEWIS AND CLARK, (MT-Z044) TOOLE, (MT-Z045) LIBERTY, (MT-Z047) BLAINE, (MT-Z048) SOUTHERN ROCKY MOUNTAIN FRONT, (MT-Z049) EASTERN TETON, (MT-Z050) JUDITH BASIN, (MT-Z051) FERGUS, (MT-Z052) JEFFERSON, (MT-Z053) BROADWATER

02/14/18 18:40 MST	0	Winter Storm
02/15/18 00:56 MST	0	

Late in the afternoon of February 14th, a cold front began moving south across North-Central Montana. Along and just ahead of the front, a band of moderate to heavy snow developed. That band of snow eventually shifted south, impacting much of Southwest Montana, although snowfall rates lessened somewhat there. Behind the front, strong cold air advection combined with strong winds aloft produced widespread wind gusts of 30 to 50 mph. Also behind the front, areas of moderate to heavy upslope-enhanced snow developed along and north of the Little Belt Mountains. The combination of wind and snow allowed many areas in North-Central Montana to experience blizzard-like conditions for about one to two hours before the wind and snow began to subside late on the 14th and into the morning of the 15th. Severe driving conditions and several road closures were reported across much of the region. At the request of local sheriff's offices, emergency travel only was requested for every county in North-Central Montana and three counties in Southwest Montana.

(MT-Z009) NORTH ROCKY MOUNTAIN FRONT

02/15/18 20:40 MST	0	Blizzard
02/15/18 20:40 MST	0	

Northwesterly flow aloft persisted over North-Central Montana during the late morning of February 15th through morning of the 16th. Within this flow, a disturbance at 700 mb traversed North-Central Montana during late evening of the 15th and early morning of the 16th. This disturbance caused the 700 mb flow to become more westerly and strengthen across the Rocky Mountain Front. In response, a surface trough east of the Rocky Mountain Front strengthened. This caused the surface pressure gradient to tighten, which in turn allowed westerly winds to intensify along the Rocky Mountain Front. These strong winds, combined with a loose snow pack, led to a blizzard along the Northern Rocky Mountain Front.

(MT-Z008) BEAVERHEAD, (MT-Z015) MADISON

02/17/18 18:25 MST	0	High Wind (MAX 55 kt)
02/17/18 21:18 MST	0	

A series of storm systems brought winter weather, and strong winds across southwestern Montana due to afternoon mixing and strong winds aloft.

(MT-Z009) NORTH ROCKY MOUNTAIN FRONT, (MT-Z010) EASTERN GLACIER, (MT-Z048) SOUTHERN ROCKY MOUNTAIN FRONT

02/23/18 09:42 MST	0	Blizzard
02/24/18 10:15 MST	0	

A series of 700 mb weather disturbances moved generally eastward over North-Central Montana between late evening of February 22nd and early evening of the 24th. During the same period, 700 mb winds became more westerly and strengthened, overall, along and east of the Rocky Mountain Front. This caused a surface trough of low pressure east of the Rocky Mountain Front to deepen, especially during late morning of the 23rd through early morning of the 24th. As the trough deepened, a tightening pressure gradient drove

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/24/18 07:00 CST		0	Winter Weather
	02/24/18 13:00 CST		0	

Ejection of the main upper level wave (which had already steered a pair of snow producing systems across the area during the prior week) brought yet another light to moderate snowfall over northwest Iowa, southeast South Dakota, northeast Nebraska and southwest Minnesota. It generally snowed for three to five hours at most across northeast Nebraska, briefly with visibility of a mile or less. Snowfall amounts were less than 2 inches, but road conditions quickly became hazardous due to the rate of snowfall.

NEBRASKA, Extreme Southwest

(NE-Z079) DUNDY

02/10/18 07:00 MST	0	Heavy Snow
02/10/18 15:00 MST	0	

A band of moderate to heavy snowfall slowly moved south across Dundy County during the day. Snowfall reports ranged from four to nine inches, with the highest amount reported north of Parks.

NEBRASKA, South Central

(NE-Z060) DAWSON, (NE-Z061) BUFFALO, (NE-Z072) GOSPER, (NE-Z074) KEARNEY, (NE-Z075) ADAMS, (NE-Z076) CLAY, (NE-Z082) FURNAS, (NE-Z083) HARLAN, (NE-Z084) FRANKLIN, (NE-Z085) WEBSTER, (NE-Z086) NUCKOLLS, (NE-Z087) THAYER

02/04/18 02:30 CST	0	Winter Weather
02/04/18 11:30 CST	0	

Although not a "major storm" by any means, this Sunday morning featured a quick-hitting burst of fluffy, wind-driven snow that roughly doubled accumulation expectations across much of South Central Nebraska, with several spots receiving 2-4" (and locally higher). The vast majority of 2+" amounts focused southwest of a line from Loup City-Grand Island-Clay Center-Hebron. According to reports from NeRAIN/CoCoRaHS and official NWS cooperative observers, some of the highest totals featured: 5" at Red Cloud, 4" at Hubbell, 3.9" at Hebron and also four miles southwest of Blue Hill, and 3.8" eight miles south of Elwood. In the Nebraska Tri Cities, totals included: 1.7" at Grand Island airport, 2.6" at Hastings NWS and 2.9" at Kearney airport. Although even the higher-end totals were relatively modest, this event packed somewhat of a punch given sustained north winds generally 20-25 MPH/gusts 30+ MPH, resulting in some drifting and at least brief visibility reductions to one-half mile or less.

As for timing, the vast majority of accumulating snow fell between 3-10 AM, gradually ending from north-to-south as forcing departed southward into Kansas. Speaking of forcing, this event was driven by a classic case of pronounced mid-level frontogenesis, trailing well-behind a strong surface cold front that passed through during the preceding 24 hours. On the larger scale, a broad shortwave trough tracked southeast from the Northern Rockies/Dakotas into the Midwest over the course of Feb. 4th. Locally, this snow event was accompanied by a very cold airmass featuring surface temperatures only in the single digits above zero F, and wind chill values ranging from -10 to -20 F.

02/06/18 20:30 CST	0	

For the second time in three days, South Central Nebraska saw a modest-but-noticeable round of snow on this Tuesday, as most of the 24-county area received 1-3", and localized totals to 4". Unlike the event two days prior on the 4th, winds were not much of a factor, with southeasterly speeds only averaging around 10 MPH. According to reports from NeRAIN/CoCoRaHS and official NWS cooperative observers, some of the highest totals featured: 4" at Geneva and four miles east of Ohiowa, 3.9" at Ravenna, 3.7" eight miles south of Elwood and 3.6" two miles northwest of Rockville. In the Nebraska Tri Cities, official totals included 3" at both Kearney and Grand Island airports and 2" at the Hastings NWS office.

This event was squarely centered on the daytime hours, as snow first broke out in far southwestern counties (such as Furnas) shortly before sunrise and gradually expanded northeastward, affecting the majority of South Central Nebraska by mid-late morning. As the afternoon and early evening wore on, snow slowly ended from west-to-east, with the final steady band exiting Fillmore/Thayer counties between 7-8 PM. In the mid-upper levels, the primary instigator was a shortwave trough migrating east out of Colorado across Kansas and far southern Nebraska. At the surface, this was another very "cold snow" with daytime highs only topping out around 10 F, and the light winds promoted by strong Arctic high pressure (roughly 1033 millibars) centered over Iowa.

Between the afternoon of Friday the 9th and the evening of Saturday the 10th, two completely separate rounds of Advisory-worthy snow affected parts of the 24-county South Central Nebraska area, making for an active couple days of winter weather despite only modest impacts. Interestingly, the two snow events overlapped minimally in area, with the first round focused mainly within northern and central counties, and the second one across the south. This event summary discusses "round 1", which occurred between the afternoon of the 9th and the pre-dawn hours of the 10th:

This first round of snow primarily affected areas north of Highway 6, and especially counties along and north of Interstate 80, which reported a fairly widespread coverage of 2-4" and isolated higher amounts to around 5". According to reports from NeRAIN/CoCoRaHS and official NWS cooperative observers, some of the highest totals featured: 5" northwest of Greeley, 4.7" west of Arcadia, 4.2" at Grand Island airport and 3.6" at Ravenna. Other official Tri Cities totals included 2.3" at Kearney and only 1.7" at the Hastings NWS office. Although not overly-strong, sustained north winds averaged 10-20 MPH with some higher gusts, causing at least minor blowing and drifting of the fluffy snow. Timing-wise, while some northern counties received minor accumulation early in the afternoon of the 9th, the primary west-east oriented snow band got going in the north between 4-6 PM before gradually slipping southward across the Interstate 80 corridor through the evening. Between midnight and 2 AM on the 10th, this snow band weakened and shifted east of the local area, signaling the end of "round 1". Aloft, a large-scale, broad trough was in place over much of the United States with a series of jet streaks passing directly over Nebraska. This setup yielded a concentrated swath of mid-level frontogenesis, which in turn promoted the rather narrow, west-east oriented snow band that dropped the majority of accumulation. At the surface, the fluffy nature of the flakes was supported by a very cold airmass with temperatures only in the single digits above zero F. The breezy north winds resulted from steady pressure rises emanating southward across the Central Plains from high pressure in Montana and the Dakotas.

(NE-Z082) FURNAS, (NE-Z083) HARLAN, (NE-Z084) FRANKLIN, (NE-Z085) WEBSTER, (NE-Z086) NUCKOLLS, (NE-Z087) THAYER

Between the afternoon of Friday the 9th and the evening of Saturday the 10th, two completely separate rounds of Advisory-worthy snow affected parts of the 24-county South Central Nebraska area, making for an active couple days of winter weather despite only modest impacts. Interestingly, the two snow events overlapped minimally in area, with the first round focused mainly within northern and central counties, and the second one across the south. This event summary discusses "round 2", which occurred on the afternoon and evening of the 10th:

This second round of snow primarily affected areas south of Highway 6, but especially far southern counties along the Kansas border, where 1-3" was common with isolated slightly higher amounts. According to reports from official NWS cooperative observers, some of the highest totals featured: 3.6" in Hebron, 3.5" at Wilsonville, 3" at Hubbell and 2.5" in Superior. Unlike the event that targeted locations farther north only 12-24 hours earlier, winds were not much of an issue, only averaging around 10 MPH from the north. As for timing, most of the affected area saw the majority of snow between 1-9 PM. However, it started accumulating as early as late-morning in the Furnas County area, while the last flakes lingered to around midnight in and near Thayer County. Aloft, a large-scale, broad trough was translating through the central United States with a series of jet streaks passing directly over Nebraska. Like "round 1" during the preceding 24 hours, this setup yielded another concentrated swath of mid-level frontogenesis, which in turn promoted a fairly narrow, west-east oriented snow band that dropped the majority of accumulation. At the surface, the fluffy nature of the flakes was supported by a very cold airmass with temperatures only averaging 5-10 F. The light winds were fostered by a roughly 1026 millibar high pressure center in northeast Nebraska.

	02/17/18 17:00 EST	0	Winter Storm
	02/18/18 00:00 EST	0	

Snow moved suddenly into northwestern and central New Jersey during the late afternoon hours on Saturday, February 17, falling at a rate of over 1 inch per hour at times before ending very early Sunday morning, February 18. This snow event shocked peoples' senses given that very warm above-normal temperatures preceded it the day before. Precipitation actually began as rain in and around Philadelphia and elsewhere throughout southern New Jersey which limited snowfall totals in those locations. The wet and heavy nature of the snowpack from this storm made shoveling more difficult. Snowfall reports of 6 to 9 inches were common across the area, with some areas receiving up to 10 inches.

(NJ-Z001) SUSSEX

	02/23/18 07:30 EST	0	Winter Weather
	02/23/18 16:45 EST	0	

An Easterly flow off the Atlantic Ocean and a warm front west of the Appalachians lead to an overrunning regime across the region. Temperatures across Sussex County were cold enough for light freezing rain during the daylight hours of February 23rd.

02/01/18 00:00 MST	0	Drought
02/28/18 23:59 MST	0	

The widespread severe drought conditions at the end of January worsened over New Mexico through early February as below normal precipitation continued across the state. The wet conditions experienced across central and eastern New Mexico from the monsoon season into late September were a distant memory by February. Several rounds of wind and very low humidity prompted red flag warnings on several days across eastern New Mexico. The weather pattern became more active for northern and western New Mexico by the middle of the month. A few winter storms impacted the higher terrain bringing modest improvements by the end of February. Statewide snowpack rebounded to a paltry 28 percent of median by the end of the month. Severe drought expanded to almost 80 percent of the state and extreme drought conditions were introduced to the northern high terrain. Weather conditions by the end of February 2018 began drying out once again with more critical fire weather. Grass fires were reported around Lincoln County prompting burn bans for the area.

(NM-Z523) CENTRAL HIGHLANDS

02/03/18 12:00 MST	0	High Wind (MAX 35 kt)
02/03/18 13:00 MST	0	

A weak upper level trough moving quickly southeast through the southern Rockies forced strong northwest winds across New Mexico. Most areas experienced wind gusts between 30 and 40 mph along with very low humidity and above normal temperatures. Clines Corners reported a one hour period of sustained winds of 40 mph during the early afternoon. The main focus with for the day was critical fire weather conditions that spread across much of east-central and southeastern New Mexico.

(NM-Z504) NORTHWEST HIGHLANDS, (NM-Z505) WEST CENTRAL PLATEAU

02/10/18 22:00 MST	0	Winter Weather
02/11/18 06:00 MST	0	

An upper level trough shifted southeast through the Great Basin into New Mexico during the late afternoon hours of the 10th. A strong cold front had shifted southwest into the eastern plains of New Mexico prior to the arrival of the upper level wave. Areas of freezing fog, light snow, and cold temperatures impacted eastern New Mexico behind the front. Meanwhile, another cold front in association with the upper level wave crossed into northwestern New Mexico and helped force a well-defined band of snow into the northern and western high terrain during the late evening hours of the 11th. The two fronts merged along the central mountain chain before shifting southward into southern New Mexico. The combination of cold temperatures and light snow along the Interstate 25 corridor produced severe travel conditions between Colmor and Las Vegas. Icy conditions along the Interstate 40 corridor near Gallup produced a motor vehicle accident that briefly shut down the highway. The east slope of the Sangre de Cristo Mountains benefited the most out of this system with snowfall amounts of six to nine inches.

02/14/18 23:00 MST	0	High Wind (MAX 57 kt)
02/15/18 12:15 MST	0	

A slow-moving upper level wave over southern California spread a deep tap of sub-tropical moisture northeastward into the southwest United States. This system delivered the most significant precipitation to New Mexico in over four months. Rain developed quickly over southeastern Arizona early on the 14th then spread into much of central and western New Mexico through the 14th and 15th. Temperatures were warm ahead of this system forcing snow levels above 7,000 feet. Widespread precipitation amounts between one half inch and one inch were reported along and west of the Central Mountain Chain. Snowfall totals between six and 10 inches were

	02/19/18 06:00 MST		0	Winter Storm
	02/20/18 00:00 MST		0	

An upper level low pressure system approaching from the Great Basin combined with deepening surface low pressure over eastern New Mexico on the 18th. Strong southwest winds spread over the entire area by late in the afternoon and continue over much of the region through the 19th. Powerful wind gusts were reported in many areas with speeds topping out between 60 mph and 80 mph for an extended period of time around the higher terrain. Snow also developed with this system as moisture arrived beneath the upper level low pressure system. Snow showers first developed over the northern and western high terrain by late in the day on the 18th then gradually increased in coverage and intensity while moving slowly eastward toward the central mountain chain through the 19th. The heaviest snowfall impacted the area along the Continental Divide where roughly 2 to 6 inches was reported from near Quemado to Cuba. The Sangre de Cristo Mountains also picked up another 4 to 10 inches along with blowing snow. This system brought the second latest measurable snowfall to the Albuquerque Sunport with three tenths of an inch on February 20th.

(NM-Z503) FAR NORTHWEST HIGHLANDS, (NM-Z510) SAN JUAN MOUNTAINS

	02/21/18 18:00 MST		0	Heavy Snow
	02/22/18 15:00 MST		0	

(NM-Z526) SOUTH CENTRAL MOUNTAINS

	02/22/18 12:50 MST		0	High Wind (MAX 50 kt)
	02/22/18 13:40 MST		0	

A progressive weather pattern across the western United States continued to provide regular bouts of winter weather over northern and western New Mexico. An upper level wave that moved quickly east from Arizona spread snow and wind along the Continental Divide and the northern mountains of New Mexico. Snowfall amounts averaged three to six inches between Gallup and Grants northeastward toward Cuba. The greatest amounts focused from near Dulce to Chama and within the high terrain of the Sangre de Cristo Mountains where six to 10 inches was reported. Difficult travel conditions were reported in many of these areas. The five inches reported at Dulce was the greatest 24-hour snowfall amount so far for the winter season. Strong winds were reported around the Ruidoso area once again as this storm system pulled eastward into the Great Plains.

(NM-Z523) CENTRAL HIGHLANDS, (NM-Z526) SOUTH CENTRAL MOUNTAINS

	02/24/18 08:30 MST		0	High Wind (MAX 54 kt)
	02/24/18 12:15 MST		0	

A strong cold front that raced southeast across New Mexico during the predawn hours forced strong winds in its wake. The strongest winds occurred from near Clines Corners southward toward Capitan where sustained winds over 40 mph and gusts near 60 mph were reported. The remainder of the region saw winds gusting between 40 and 50 mph. Temperatures were 10 to 20 degrees below normal over the entire area with low humidity behind the front.

(NM-Z526) SOUTH CENTRAL MOUNTAINS

	02/26/18 12:00 MST		0	Wildfire
	02/26/18 14:00 MST		0	

The combination of southwest winds, extremely low humidity, and very dry fuels set the stage for elevated fire danger across much of New Mexico. Emergency management in Lincoln County reported that a wildfire started shortly after the noon hour near Capitan. The fire spread very quickly through grassy fuels to a size of 30 acres. One home and an outbuilding were destroyed. The Red Cross was working with the family and emergency management to assist the family with their losses. No injuries or fatalities occurred.

	02/04/18 21:00 EST		0	

An area of low pressure tracked across the Great Lakes on Sunday the 4th as another area of low pressure moved up the east coast reaching the New England coast by the early morning hours on the 5th. The low pressure over the Great Lakes eventually merged with the low moving up the east coast. This brought a widespread snow to a large part of north central New York from the early morning hours on the 4th to the evening of the 4th. Snowfall totals ranged from 6 to 12 inches with locally up to 17 inches.

<p>Emergency management reported flooding of River Road in the vicinity of Snack Rock on the Hudson River.</p>				
<p>A large ice jam remained in place on the Mohawk River for much of the month of February and was one of the biggest ice jam seen in decades, according to Union College professor John Garver. The ice jam stretched up to 17 miles from Rexford to Crane Hollow throughout the month in February. The ice jam mainly remained in place into late February and received a large amount of media and government attention. Albany County was concerned about impacts downstream if the jam were to give way quickly. Temperatures skyrocketing into the 60s and 70s on February 20-21 coupled with around 0.50-1.00" rainfall on the 19th over the Mohawk basin allowed river levels to rise and flooding occurred by the 21st within the Stockade neighborhood of Schenectady and across the river in Scotia, as well as backwater flooding of the Alplaus Kill. A substantial portion of the ice jam gave way during the early morning hours of the 22nd, leading to concern for flooding in the downstream communities, but it turned out that impacts were minimal. There were some road closures in the Rotterdam Junction and Schenectady area due to the ice jam movement and breakage. The remainder of the jam gradually broke up over the next week or so with little impact.</p>

An ice jam formed in the Little Salmon River in Fort Covington in January and remained in place through February. In late February the combination of record warmth, rainfall, and rapid snow melt caused significant rises on the little Salmon River which was already jammed from January. At 1216pm notification was passed along that water evacuations were being performed which necessitated the upgrade from an areal flood warning to a flash flood warning in coordination with local emergency management.

An ice jam formed in the Little Salmon River in Fort Covington in January and remained in place through February. In late February the combination of record warmth, rainfall, and rapid snow melt caused significant rises on the little Salmon River which was already jammed from January. This caused flooding of the town of Fort Covington and evacuations were performed.

NEW YORK, West

(NY-Z004) WAYNE, (NY-Z005) NORTHERN CAYUGA, (NY-Z006) OSWEGO, (NY-Z007) JEFFERSON, (NY-Z008) LEWIS				
	02/02/18 03:00 EST		0.12M	Lake-Effect Snow
	02/03/18 15:30 EST		0	

After a strong cold front crossed the lower Great Lakes early on the morning of February 2nd, a cold, northwest flow across Lake Ontario with an upstream lake connection generated bands of lake effect snow along the south shore of Lake Ontario from Niagara to Oswego counties. The most robust lake effect snow band hugged the Lake Ontario shoreline, coming inland near Sodus and extended east-southeastward through Wolcott to north of Syracuse. Very intense snowfall was observed within a narrow corridor under this band, with a New York State Mesonet near Wolcott picking up over 9 inches of snow in just 3 hours, while a trained spotter in Wolcott reported a total of 14 inches occurring in just under 5 hours. This maximum in snowfall extended southeastward in Cayuga County, with 6 to 12 inches reported near Cato and Ira in northern Cayuga county. Outside of this localized area of heavy snow, amounts quickly dropped off to just 2 to 5 inches across much of Wayne and Cayuga counties. A shortwave passage mid-morning on February 2nd disrupted the initial band of heavy lake effect snow southeast of Lake Ontario, breaking it apart into weak multi-banded snow showers through the rest of the day. The low-level flow again became well aligned with the long lake axis of Lake Ontario late Friday night through Saturday. A lake effect band moved from near Cayuga County Friday evening, quickly across central Oswego County before centering across the central and southern portions of the Tug Hill early Saturday morning. By Saturday afternoon, the flow continued to back around to the southwest pushing the heavy snow northward across central and even northern portions of Jefferson county, including the Watertown area. This second blast of heavy lake effect snow with this event not only resulted in another maximum in snowfall across the typical snow belt of the central Tug Hill, where just over a foot and a half fell, but also spread respectable snowfall accumulations northward into the Watertown area where up to 10 inches fell through Saturday afternoon. Specific snowfall totals included: 19 inches at Redfield; 15 inches at Hooker; 14 inches at Wolcott; 12 inches at Lacona; 11.5 inches at Ira; 10 inches at Watertown; 8 inches Natural Bridge and Harrisburg; and 7 inches at Cato.

(NY-Z006) OSWEGO, (NY-Z007) JEFFERSON, (NY-Z008) LEWIS				
	02/08/18 12:00 EST		60K	Lake-Effect Snow
	02/09/18 10:30 EST		0	

Lake effect snow developed under a cold, northwest flow. Initially weak multi-banded lake effect snows developed southeast of the lakes, however, by Thursday afternoon and evening, the lake effect snow organized into a singular band as winds backed to the west and aligned with the long fetch of Lake Ontario. The lake effect intensified bringing the heaviest snows to the typical Tug Hill Plateau region through Thursday night. By Friday morning, decreasing winds allowed the band of heavy lake effect snow to retreat toward the Lake Ontario shoreline of northern Oswego and southern Jefferson County. While typical locations in the central Tug Hill picked up significant accumulations, about 15 inches, the highest totals came across the lower elevations of southern Jefferson County near Lorraine and Mannsville where about 21 inches were tallied. Other snowfall reports included: 15 inches at Redfield; 14 inches at Copenhagen; and 10 inches at Hooker.

As a wave of low pressure developed and moved along a stationary front over the Deep South, moisture spread into western North Carolina during the early morning hours of the 4th. The precipitation began as a mixture of rain, sleet, and snow in many areas. While some light accumulation of sleet and snow was reported across the mountain valleys, all areas except for the high peaks and ridge tops transitioned to freezing rain by mid-morning. Most of any measurable ice was reported in the Piedmont and foothills, where amounts of .1 to .2 inch were common. Due to temperatures hovering right around freezing, roads generally remained wet, and ice accretion was primarily confined to elevated surfaces and vegetation. Meanwhile, snowfall of 5-7 inches was reported above about 5000 feet.

A stream gauge on the Little River near Penrose exceeded its established flood stage after more than 2 inches of rain fell across the basin in less than 12 hours. Total rainfall of 3 to 5 inches fell across the area on the 11th and 12th and the river stayed above flood stage for almost 24 hours. Minor river flooding also occurred along the French Broad River near Blantyre from the 11th through the 14th.

BURKE COUNTY --- 1.9 E CHESTERFIELD [35.83, -81.64]

Em reported the bridge over Lower Creek on Antioch Rd was flooded and briefly closed after more than 2 inches of rain fell in around 12 hours.

Moderate to heavy rain developed across the western Carolinas within an unseasonably warm and moist air mass ahead of a cold front. Widespread rainfall amounts of 3 to 5 inches were reported along and near the Blue Ridge escarpment, which resulted in some minor flooding in the upper French Broad basin.

Surface low pressure tracked across South Dakota on the morning of February 18th, then moved to just north of the Twin Cities in Minnesota by the early evening. An area of snow over north central South Dakota in the early morning hours spread east-northeast, eventually setting up in an east-west band from New Rockford to Hillsboro to Bemidji. There were intense snow rates within this band through the remainder of the morning into the afternoon. Snow totals ranged from 6 to 15 inches along this corridor.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

February 7th. Initially the precipitation started as snow across the upper Ohio Valley. As the warm air surged north, precipitation type changed to a wintry mix of sleet and freezing rain. Locations in northern West Virginia and southwestern Pennsylvania changed over to rain with temperatures climbing into the upper 30s to lower 40s. Eastern Ohio, the northern West Virginia Panhandle, and locations from central Beaver county, northeast into southern Jefferson county, Pennsylvania switched over to freezing rain. Ice accumulation was around a quarter of an inch for these places. Farther north along the I-80 corridor and parts of interior southeastern Ohio, cold air remained socked in, keeping the precipitation all snow. Several inches of snow fell with the highest amounts located across parts of northern Butler county northeast into Clarion, Jefferson, and Forest counties. For eastern Ohio, Columbiana, Carroll, southwest into Coshocton county around six inches of snow fell.

BELMONT COUNTY --- 0.9 NW BARTON [40.11, -80.84], 1.2 SE CRESCENT [40.11, -80.86], 0.8 WSW BARTON [40.10, -80.85], 0.3 NW BARTON [40.10, -80.83]

Emergency manager reported that County Road 6 was partially flooded in places. In addition, Lambert Road is flooded with up to 2 feet of water.

Waves of heavy rain produced flooding on February 15th through the 16th. A line of thunderstorms developed along a lifting warm front, providing not only for enhancement in the rainfall totals, which ranged from 1-3 inches, but also attributed to shear that supported the development of a short-lived tornado over Uniontown, in Fayette county Pennsylvania. This was the first tornado in February since 1950 for the Pittsburgh Weather Service area of responsibility.

NOBLE COUNTY --- 0.3 WSW DEXTER CITY [39.65, -81.48], 0.4 ESE DEXTER CITY [39.65, -81.46], 1.3 SE CALDWELL [39.74, -81.50], 0.6 SSW CALDWELL [39.74, -81.52], 1.3 S DUDLEY [39.68, -81.50]

Department of highways reported that State Route 724 was closed in both directions due to flooding between State Route 260 and State Route 145.

NOBLE COUNTY --- 1.5 ESE CALDWELL [39.75, -81.49], 1.2 NNE DUDLEY [39.72, -81.49], 1.5 SE HARRIETSVILLE [39.61, -81.33], 0.3 ENE ROAD FORK [39.67, -81.31]

02/22/18 09:20 EST	0	Flood (due to Heavy Rain)
02/22/18 16:00 EST	0	Source: Department of Highways

Department of highways reported State Route 564 was closed in both direction due to flooding between junction of State Route 78 and State Route 145.

Over-saturated ground lead to another round of flooding on Feb 22nd, despite rainfall amounts generally under an inch. Several landslides were reported as well as basement flooding in addition to road closures.

OHIO, North

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
KNOX COUNTY --- MT VERNON [40.40, -82.48], 1.0 W MT VERNON WYNKOOP AR [40.37, -82.52], 3.9 SSW MONROE MILLS [40.35, -82.40], 0.9 WSW MONROE MILLS [40.40, -82.39]				
	02/15/18 17:40 EST		25K	Flood (due to Heavy Rain)
	02/16/18 12:00 EST		0	Source: Emergency Manager

Rainfall measured over 2.50" in Knox County produced flooding mainly south of Mt. Vernon and College Township on the evening of the 15th. The flooding resulted in multiple road closures. Route 661 was closed south of Mt. Vernon with about a foot of water flowing across it. Rt 62 east of Mt. Vernon closed with several inches of flowing water across it. Water rescues were conducted on Lower Gambier Road after the Kokosing River overflowed its banks. The road was closed most of the day on Friday the 16th as well. Stricker Road was closed due to washed out culverts. Stull and Sapp roads, and many other were closed.

An active and warm weather pattern in February produced widespread minor flooding across the area. Starting during the second week of February a blocking pattern developed keeping a warm ridge of high pressure over the eastern U.S. with a flow from the Gulf of Mexico into the Ohio River Valley. The heaviest rains fell near and along a quasi-stationary front that lingered between northern Indiana and over the Ohio River for about a two week period. Despite dodging the heaviest rain, the area received well above normal rainfall especially over southern and eastern counties including the Muskingum and Mahoning River basins. Though very wet, most of the area rivers were able to contain the streamflows with only minor impacts. Non-river flooding was most problematic in Knox County and portions of the upper Muskingum watershed. Numerous road closures were reported but no inundation of properties were reported.

MARION COUNTY --- WALDO [40.47, -83.08], 3.0 NE WALDO [40.50, -83.03], 3.3 SE WALDO [40.44, -83.04], 2.8 S WALDO [40.43, -83.09]	02/25/18 16:00 EST	0	Flood (due to Heavy Rain)
	02/28/18 12:00 EST	0	Source: Emergency Manager

An inch and a half of rain fell over Marion County on the 25th, which had been preceded by wet conditions prior to this event. The Delaware Reservoir located south of Waldo was experiencing high water levels. This allowed the Olentangy River and its tributaries to back up. Flooding of area roads resulted from this excessive water. Some of the roads in the area, including those flooded from the Scioto River, include Deadwood Rd between Essex Rd and Mt. Olive Agosta Rd, Marseilles Galion Rd W between Hillman Ford Rd, LaRue Green Camp Rd between SR 37 and Guthery Rd, Fairchild Rd at SR 746 Flooding in Waldo (Marion County) on the Brondige Run (tributary) on Gearhiser Road and Mt. Vernon Rd East(RT 86).

A warm and wet pattern continued through the end of February continuing and creating new flooding mainly over southern and eastern Ohio. The most notable flooding was along the Ohio River, however the headwaters of the Muskingum also experienced minor flooding conditions. Rainfall totals for the month were 200% of normal with areas in Knox and surrounding counties over six inches. A rain event on February 25th alone produced one to two inches of rain.

<p>A strong low pressure system moved through the middle Ohio River Valley on the 7th. North and west of this low, surface temperatures remained at or below freezing. This resulted in a period of freezing rain, sleet and snow. Ice accretion of 0.25 to 0.3 inches occurred in a strip across Vinton, Athens, Perry and Morgan County. Scattered power outages occurred across Perry and Morgan counties where the widespread icing brought down trees and power lines. There was a sharp line between the freezing rain/sleet, and where it was all snow. The far northwestern corner of Perry County got several inches of snow instead of the ice. Closer to the Ohio River, generally a light coating up to 0.2 inches of ice was measured through mid morning, before temperatures rose above freezing.</p>

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A low pressure system moved through the southern Ohio River Valley on the 6th, crossing the middle Ohio River Valley on the 7th. This system tapped into moisture from the Gulf of Mexico and brought a prolonged period of moderate to heavy rainfall. Many rain gauges across southeastern Ohio reported 24 hour rainfall amounts of 1.0 to 1.3 inches, resulting in minor flooding.

WASHINGTON COUNTY --- 0.6 N MACKSBURG [39.64, -81.47], 0.9 ENE MACKSBURG [39.64, -81.46], 1.0 ESE MACKSBURG [39.62, -81.45], 2.0 W GERMANTOWN [39.58, -81.36], 1.6 ESE BLOOMFIELD [39.56, -81.17], 1.1 E SCHLEY [39.45, -81.23], 1.5 W STANLEYVILLE [39.47, -81.45]

02/11/18 17:00 EST	3K	Flood (due to Heavy Rain)
02/12/18 12:00 EST	0	Source: River/Stream Gage

Broad Street in Macksburg had high water due to flooding on Duck Creek. Other low lying fields and camps near the river also experienced high water levels. The gage at Macksburg on Duck Creek spilled from its banks around 5 PM on the 10th, crested at 13.5 feet, or half a foot above bankfull level around midnight, and returned to its banks before sunrise.

Duck Creek also flooded near Whipple, with minor water issues along State Routes 26, 145 and 821. The gage at Whipple rose above bankfull level just before sunrise on the 11th, crested at 11.2 feet, or 0.2 feet above bankfull mid morning, and was back below bankfull by noon.

The Little Muskingum River near Bloomfield also flooded. The river rose above its bankfull level of 16 feet around midnight on the 12th, crested at just over 17 feet during the predawn, and returned within its banks by 8:30 AM. Route 26 near the intersection with Route 260 was covered in water.

A cold front brought a period of heavy rain on the 10th and 11th. One to one and half inches of rain fell, causing several creeks and streams to overflow their banks on the 11th.

WASHINGTON COUNTY --- 0.8 N MACKSBURG [39.64, -81.47], 1.4 NNE DEVOLA [39.49, -81.47], 0.4 NNE DELL [39.42, -81.35], 0.4 NNE GRANDVIEW [39.53, -81.08], 1.6 ESE DALZELL [39.56, -81.27]

02/16/18 03:00 EST	2K	Flood (due to Heavy Rain)
02/17/18 14:00 EST	0	Source: Department of Highways

Flooding along Duck Creek and the Little Muskingum River closed several roads including State Routes 26, 145 and 821.

The river gage at Bloomfield on the Little Muskingum rose above its bankfull level of 16 feet just before sunrise on the 16th. It crested at 22.5 feet or half a foot below moderate flooding that evening, and returned to within its banks around 7 AM on the 17th.

Duck Creek at Whipple rose out of its banks around 8 AM on the 16th, and crested at 14.8 feet, or 2.8 feet above bankfull at 1 AM on the 17th. The creek returned to within its banks early that afternoon.

The West Fork of Duck Creek at Macksburg also flooded, rising above its bankfull level of 13 feet around 3 AM on the 16th. It experience a long duration crest right at moderate flood stage of 15 feet, from around noon on the 16th to about 3 AM on the 17th. The creek returned to its banks 12 hours later.

ATHENS COUNTY --- 0.9 WSW MINERAL [39.31, -82.28], 2.0 W FROST [39.27, -81.87], 1.0 S PLANTSVILLE [39.44, -81.87], 1.6 SE JACKSONVILLE [39.45, -82.06], 0.6 ENE PALOS [39.53, -82.06], 2.5 NW HUNTERDON [39.55, -82.15], 1.0 SW BEAUMONT [39.46, -82.16], 1.2 NW EAST CLAYTON [39.46, -82.27]

02/16/18 08:00 EST	2K	Flood (due to Heavy Rain)

Numerous roads were closed across the county due to flooding. This included State Route 144 near mile marker 12, and State Route 329 between State Routes 144 and 550. State Route 13 was closed between Trimble and Glouster and State Routes 56 and 356 were both closed on the western end of the county.

Monday Creek at Doanville also flooded. The stream gage showed the creek going above bankfull level of 16 feet around sunrise on the 17th. It crested at 16.2 feet around 10 AM, and returned to its banks around 2 PM.

MEIGS COUNTY --- 0.8 E POMEROY [39.03, -82.01], 1.6 NNE RACINE [38.99, -81.91], 1.4 SW TUPPERS PLAINS [39.16, -81.87], 1.0 WNW PAGEVILLE [39.18, -82.17], 3.0 SSE LANGSVILLE [39.01, -82.16], 0.6 WNW MIDDLEPORT [39.00, -82.06]

02/16/18 08:30 EST	2K	Flood (due to Heavy Rain)
02/17/18 16:15 EST	0	Source: Department of Highways

Flooding closed a number of roads across the county, including State Routes 124, 143, 248, and 681.

The Shade River near Chester also flooded. The river rose above its bankfull level of 17 feet just before noon on the 16th, crested at about 19.4 feet around sunrise on the 17th, and returned to its banks late that afternoon.

WASHINGTON COUNTY --- 2.4 E WATERFORD [39.53, -81.58], 0.4 N COALRUN [39.58, -81.58], 2.0 N BECKETT [39.61, -81.70], 0.8 S BECKETT [39.57, -81.70], 1.0 W WATERFORD [39.53, -81.65]

The Ohio River gage at Willow Island Lock rose above its flood stage of 37 feet on the evening of the 16th. The river crested shortly after midnight on the 18th at just over 40 feet and dropped back below flood stage around sunrise on the 19th. This flooded Ohio Route 7 between Reno and Matamoras.

At the Marietta Pumphouse gage, the Ohio River rose above its flood stage of 35 feet late on the 16th, and crested at 37.9 feet, or just 0.1 below moderate flood, just after midnight on the 18th. The river returned below flood stage just after sunrise on the 19th. Many roads along the river in Marietta were flooded, including Stark Street, Pike Street, Elmwood Avenue, Hart Street, Greene Street and Ohio Street.

The river near Parkersburg, WV, rose above flood stage late on the 16th. Crest occurred mid morning on the 18th at 39.7 feet, almost 2 feet above moderate flood stage of 38 feet. The river fell back below flood stage just after noon on the 19th. This flooded Walnut Street and Scott Avenue in Belpre, along with portions of Dave's Marina.

MEIGS COUNTY --- 0.4 ENE POMEROY [39.03, -82.02], 1.1 E PINEGROVE [39.17, -81.81], 1.2 S EDEN [39.15, -81.75], 0.6 NE LONG BOTTOM [39.09, -81.81], 2.8 SE ROLANDUS [38.95, -81.79], 0.6 NNE RACINE [38.98, -81.92]

----------	-----------	-------------------	---------------------	------------------------

The gage at Belleville Lock on the Ohio River entered moderate flooding, cresting at almost 43.5 feet on the evening of the 18th. At Belleville, moderate flood stage is 38 feet. Flooding began at Belleville just after midnight on the 17th, and the river dropped back below flood in the pre-dawn hours of the 20th. This high water closed several sections of Route 124, as well as a portion of Route 248 near Sand Hill.

The Ohio River gage at Racine Lock rose above its flood stage of 41 feet early on the 17th. The river surpassed moderate flooding, and almost reached its major flood stage of 48 feet, during its crest of 47.7 feet just after midnight on the 19th. The river dropped back below flood stage around noon on the 20th. This cause flooding along Route 124 near Antiquity and Minersville.

At the Pomeroy staff gage, the Ohio River rose above its flood stage of 46 feet late around noon on the 17th. Major flooding occurred along this stretch of the river, where the staff gage read almost 50.5 feet during crest late on the 18th, topping major flood stage by half a foot. Water levels dropped back below flood stage around sunrise on the 20th. Water inundated much of Main Street in Pomeroy, including flooding businesses, side roads and parking lots and the amphitheater. A culvert under Main Street also collapsed.

GALLIA COUNTY --- 0.6 W CROWN CITY [38.60, -82.29], 1.2 NNW CHIPPER MILLS [38.78, -82.23], 1.5 SSW KYGER [38.96, -82.16], 1.3 SW CHESHIRE [38.94, -82.12], 1.1 N CHIPPER MILLS [38.79, -82.22], 1.9 NNE SWAN CREEK [38.63, -82.19]

Near Point Pleasant, WV, the Ohio River almost reached major flooding, topping out at 47.5 feet just after midnight on the 19th. Major flood stage is 48 feet. Flooding began around 3 AM on the 17th, and the river dropped below flood stage mid morning on the 21st.

Near the Robert C. Byrd lock, the Ohio River rose above flood stage of 50 feet a couple hours before sunrise on the 18th. Crest occurred just above moderate flood stage of 52 feet during the pre-dawn hours of the 19th. The river dropped back below flood stage at about 6 o'clock that evening.

This flooding closed several sections of Route 7, as well as portions of Little Kyger Road and Addison-Blaville Road.

A wave of low pressure and a surface front crossed West Virginia, producing heavy rainfall on the 16th. Generally 1 to 2 inches of rain fell on already saturated soil. This resulted in creek and stream flooding on the 16th and into the 17th. As the rain drained through the river system, smaller main stem rivers flooded. This eventually led to flooding along the the Ohio River.

(OH-Z075) ATHENS, (OH-Z076) WASHINGTON, (OH-Z083) JACKSON, (OH-Z084) VINTON, (OH-Z085) MEIGS

02/17/18 12:00 EST	0	Winter Weather
02/17/18 16:00 EST	0	

A low pressure system moved through the central Appalachians on the 17th, driving a lot of low level moisture into the middle Ohio River Valley. While this system also pulled warmer air northward, it remained cold enough across southeastern Ohio for a period of snow during the early afternoon before changing over to rain by late afternoon. There was a narrow band that experienced a brief period of very heavy snow, with reports of 2 to 3 inches accumulating in an hour. This band was across portions of Jackson, Vinton, Athens, Meigs, and Washington Counties. Even across individual counties, snowfall accumulations varied drastically based on the location of the heaviest band. For example, in Meigs County, a member of the public measured just over 4 inches of snow near Tupper's Plains, while in Chester only 2 inches accumulated. In Washington County, 3 inches of snow was measured near Reno, with under an inch in Marietta. In Jackson County, the city of Jackson was hit hard where the cooperative observer measured 3 to 4 inches of snow in less than 2 hours, however the southern part of the county only got a couple inches.

WASHINGTON COUNTY --- 0.8 N MACKSBURG [39.64, -81.47], 0.9 ESE MARIETTA [39.42, -81.44], 0.7 WSW DELL [39.41, -81.36], 0.7 WSW HOHMAN [39.52, -81.19], 1.7 E DALZELL [39.57, -81.27], 0.6 WSW ELBA [39.60, -81.43]

Flooding along Duck Creek and the Little Muskingum River caused high water on some local roadways.

At Macksburg, the West Fork of Duck Creek rose above its 13 foot bankfull level around 8 AM on the 22nd. The creek crested at 14.3 feet around 2 PM that afternoon and returned to within its banks at 3 AM on the 23rd.

Duck Creek at Whipple rose above its bankfull level of 12 feet just before 11 AM on the 22nd and crested at 15 feet just before midnight. The creek dropped back below bankfull just before noon on the 23rd.

The Little Muskingum River at Bloomfield crested at 24 feet, 1 foot above moderate stage just before midnight on the 22nd. It had originally risen above its 16 foot bankfull level around 11 AM. It returned to its banks around 11 AM on the 23rd.

Symmes Creek briefly flooded early on the 26th. The river gage showed the creek rising above bankfull level of 19 feet at 1 AM, and cresting just over 19 feet just before 2 AM. The creek was back within its banks by 2:45 AM.

MEIGS COUNTY --- 1.7 NW PORTLAND [39.02, -81.79], 3.0 ESE BASHAN [39.03, -81.82], 1.1 SW LONG BOTTOM [39.07, -81.84], 0.4 SE LONG BOTTOM [39.08, -81.82], 2.9 NNW PORTLAND [39.04, -81.79]

02/26/18 19:00 EST	0	Flood (due to Heavy Rain)
02/26/18 21:00 EST	0	Source: River/Stream Gage

Very minor flooding occurred on the Ohio River, causing some water to back up onto State Route 124 near Long Bottom and Portland.

The gage on the Ohio River at Belleville Lock rose above its 35 foot flood stage very briefly around 8:30 pm on the 26th.

An oscillating surface boundary with multiple waves of low pressure brought periods of moderate to heavy rainfall from the 22nd into the 25th. This caused another round of flooding on small creeks and streams across the middle Ohio River Valley, and eventually lead to minor flooding on the Ohio River.

	02/25/18 00:06 EST		0	Source: NWS Storm Survey
The tornado is believed to have first touched down on Neville Penn Schoolhouse Road about halfway between Felicity and Neville. Tree damage in this area was very extensive, with many trees uprooted and others snapped. In addition, a mobile home was destroyed. Damage continued further northeast on Neville-Penn Schoolhouse Road, with debris from one damaged structure observed blown against a fence line and into the nearby trees. A few other structures on Neville-Penn Schoolhouse Road suffered roof damage, including two barns which had partial roof removal. Additional tree damage was observed further northeast, with a few trees snapped north of OH-756.

Several inches of water was flowing on Mason-Montgomery Rd. south of Hamilton Rd.				
BROWN COUNTY --- 0.9 ENE HAMERSVILLE [38.92, -83.96], 0.1 E NEW HOPE [38.97, -83.90]				
	02/25/18 00:13 EST		65K	Tornado (EF1, L: 4.90 mi , W: 300 yd)
	02/25/18 00:18 EST		0	Source: NWS Storm Survey
The tornado is first believed to have touched down near Lucas Road, about one mile northeast of Hamersville. More significant damage was observed near the intersection of White Oak Valley Road and Smokey Row Road, where a well-built home suffered partial roof loss and additional loss of roofing material. At another property on White Oak Valley Road, a trailer was flipped over. Tree damage was extensive along Smokey Row Road, especially near its intersection with Vinegar Hill Road.				
On New Hope-McKinley Road, about a half mile east of U.S. 68, a mobile home had its roof completely removed. Debris from this roof was observed thrown about 500 yards downstream (northeast) of its origin. Additional tree damage was observed along New Hope-White Oak Station Road.				
In addition to the tornadic damage described above, the National Weather Service storm survey observed non-tornadic damage across a much wider area. This area of damage extended about 13 miles in length, stretching from far southeastern Clermont County through north central Brown County. This straight-line wind damage affected areas near Feesburg and Hamersville, and was observed on both sides of the surveyed tornadic circulation. This damage consisted of additional tree and outbuilding damage, including the destruction of a few outbuildings.				
CLINTON COUNTY --- 4.3 SSE JONESBORO [39.24, -83.81]

Strong to severe thunderstorms, with very heavy rainfall, developed ahead of a cold front.				
OKLAHOMA, Eastern				
(OK-Z054) OSAGE, (OK-Z055) WASHINGTON, (OK-Z059) PAWNEE, (OK-Z062) MAYES, (OK-Z063) DELAWARE, (OK-Z064) CREEK, (OK-Z065) OKFUSKEE, (OK-Z066) OKMULGEE, (OK-Z067) WAGONER, (OK-Z068) CHEROKEE, (OK-Z069) ADAIR, (OK-Z070) MUSKOGEE, (OK-Z071) MCINTOSH, (OK-Z072) SEQUOYAH, (OK-Z073) PITTSBURG, (OK-Z074) HASKELL, (OK-Z075) LATIMER, (OK-Z076) LE FLORE				
	02/01/18 00:00 CST		0	Drought
	02/28/18 23:59 CST		0	
Severe drought (D2) conditions continued across much of eastern Oklahoma through mid February. An active weather pattern began across the area on February 16th and continued for over a week, resulting in multiple rain events across the region. Several of these events were significant. Due to these late-month rains, total monthly rainfall from six to ten inches occurred across eastern Oklahoma generally along and south of I-44, with one to four inches occurring to the north of I-44. The normal average rainfall for February across this region is from around two inches in Osage and Pawnee Counties to around three inches in southeastern Oklahoma. The excessive rainfall that fell across much of the area during the latter part of the month resulted in much improved drought conditions by the end of February, with the exception of portions of Osage and Pawnee Counties, where severe drought conditions persisted through the end of the month. Monetary damage estimates due to the drought were not available.				
(OK-Z062) MAYES				
	02/01/18 00:00 CST		0	Wildfire
	02/05/18 11:00 CST		0	
Unseasonably warm temperatures, strong gusty wind, low relative humidity, and drought-stricken, dormant vegetation promoted the rapid spread of several wildfires in eastern Oklahoma during late January. A wildfire burned over 300 acres in Mayes County on the 31st, which continued through February 5th before it was fully contained.

A 53-year old man drove his vehicle into a flooded, low-water crossing about three miles east of Stillwell in Adair County, where he drowned.

Direct Fatalities: M53VE

Widespread showers and thunderstorms developed across much of eastern Oklahoma on the 20th as a cold front moved through the region. A very moist air mass in place ahead of the cold front promoted the development of heavy rainfall from some of this activity. Widespread two to five inches of rain fell across much of east central and southeastern Oklahoma through the morning hours of the 21st, which resulted in some flooding of low-lying areas as well as low water crossings.

	02/25/18 19:30 CST		0	Source: Official NWS Observations

The Illinois River near Chewey rose above its flood stage of 12 feet at 9:15 am CST on February 24th. The river crested at 20.08 feet at 1:15 am CST on the 25th, resulting in major flooding. This crest was the fifth highest crest ever recorded at this site. Very severe flooding occurred from near Fidler's Bend to near Hanging Rock, with numerous cabins flooded in permanent campgrounds, and portions of Chewey Road inundated east of Chewey Bridge. The river fell below flood stage at 7:30 pm CST on the 25th.

A slow-moving, strong cold front moved through eastern Oklahoma on the 20th and 21st. Very moist air resided across the region ahead of the front. Widespread showers and thunderstorms developed over the area as the front moved into eastern Oklahoma, and the unseasonably moist air supported heavy rainfall with this activity. Additional heavy rainfall occurred on the 23rd. Much of eastern Oklahoma received between six and ten inches of rain over a 7-day period during this active weather pattern. This excessive rainfall resulted in moderate to major river flooding in the Lower Arkansas River Basin.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	----------------------	------------------------	------------------------

Snow Arena Road, Sharps Road near Highway 37, and Tree Farm Road were closed due to flooding. Many other low lying areas were covered in high water as well.

An upper level low pressure system progressed east southeast from the Pacific Northwest into the Central and Southern Rockies on the morning of February 20th, reinforcing a cold front slowly southeast into Southeast Oklahoma, Northeast Texas, and Southwest Arkansas during the late evening and early morning hours of February 20th-21st. A deep southwest flow aloft was present along and behind the front across the Southern Plains and Mississippi Valley, with weak embedded disturbances in the flow helping to enhance the development of scattered to numerous showers and thunderstorms along and behind the front. A warm, moist, and weakly unstable air mass spread north ahead of the front into Northeast Texas, Southeast Oklahoma, Southwest Arkansas, and North Louisiana, with the southwest flow aloft tapping into the subtropical jet, thus transporting Pacific moisture northeast along and behind the front. Periods of moderate to at times, heavy rainfall fell along and behind the front across Southeast Oklahoma, and persisted throughout the early afternoon hours on the 21st before diminishing. However, additional moderate to heavy rainfall developed and fell across much of Southeast Oklahoma throughout the 22nd. Widespread rainfall amounts of seven to in excess of nine inches fell across McCurtain County, which resulted in periods of flash flooding.

	02/24/18 15:30 CST			Source: Emergency Manager

High water flowing across numerous roads in and around Valliant.

A warm front lifted north into Eastern Oklahoma and Central Arkansas during the morning hours of February 24th, resulting in a large warm and humid air mass across the Ark-La-Tex region. Meanwhile, showers and thunderstorms increased across North Texas during the morning as well, ahead of a strong upper trough that ejected east across the Southern Plains and Mississippi Valley. This trough also drove an attendant cold front into Southeast Oklahoma and East Texas during the afternoon, with numerous showers and thunderstorms noted along and ahead of the front. The air mass ahead of the front was moderately unstable, allowing the storms to intensify and become severe as they moved into McCurtain County Oklahoma and portions of Southwest Arkansas, resulting in damaging winds which downed numerous trees and resulted in structural damage of several homes, while flipping over a travel trailer. These storms also produced heavy rain while moving repeatedly over the same areas, resulting in flash flooding, given that the grounds were still saturated from excessive rainfall that had fallen over the prior several days.

MCCURTAIN COUNTY --- 1.7 N RUFE [34.15, -95.15], 2.6 S RUFE [34.08, -95.15], 0.2 SE SLIM [34.08, -95.10], 2.6 NE RUFE [34.15, -95.12]

A foot of water covered Highway 70 near Valliant.

A warm, moist, and unstable air mass remained in place across much of the Ark-La-Tex on February 28th, as a warm front quickly returned back north into Southern Kansas and Missouri. A positive tilt upper level trough of low pressure traversed the Southern Plains during the afternoon, thus increasing large scale ascent resulting in showers and thunderstorms becoming numerous during the evening hours along a convergent elevated boundary that extended north of the Interstate 30 corridor of Northeast Texas and Southwest Arkansas. An approaching cold front and dry line from the west also helped to enhance thunderstorm organization, resulting in areas of heavy rain developing atop already saturated ground conditions from heavy rainfall that fell since February 20th. Additional rainfall amounts of 3-5 inches fell across much of Southeast Oklahoma during the afternoon and evening of the 28th, which continued into the morning hours of March 1st. This resulted widespread flash flooding across McCurtain County, which lingered into the predawn hours on March 1st.

02/20/18 09:00 CST	0	Ice Storm
02/22/18 14:00 CST	0	

A strong, shallow cold front pushed through pulling temperatures below freezing. With abundant moisture in the area, widespread showers developed post-frontal and slowly moved off eastward on the 20th. The tail end of these showers was behind the freezing line, resulting in freezing rain and sleet. A second round of showers developed post-frontal on the 21st under the influence of isentropic lift. With the cold air firmly in place, most of the precipitation that fell was either freezing rain or sleet (sleet was fairly widespread across the area). Yet, a third round of precipitation developed on the 22nd. Subfreezing temperatures persisted into early afternoon allowing more freezing rain and sleet to fall.

Despite efforts to gather reports, this event likely has data gaps. Beginning and ending times for events are estimates and include all three rounds of winter precipitation. It should also be noted that throughout this whole time period, even small accumulations from freezing drizzle caused fairly widespread travel impacts.

Low pressure moved up the western side of the Appalachians Tuesday night, February 6th into the morning hours of Wednesday, February 7th. Initially the precipitation started as snow across the upper Ohio Valley. As the warm air surged north, precipitation type changed to a wintry mix of sleet and freezing rain. Locations in northern West Virginia and southwestern Pennsylvania changed over to rain with temperatures climbing into the upper 30s to lower 40s. Eastern Ohio, the northern West Virginia Panhandle, and locations from central Beaver county, northeast into southern Jefferson county, Pennsylvania switched over to freezing rain. Ice accumulation was around a quarter of an inch for these places. Farther north along the I-80 corridor and parts of interior southeastern Ohio, cold air remained socked in, keeping the precipitation all snow. Several inches of snow fell with the highest amounts located across parts of northern Butler county northeast into Clarion, Jefferson, and Forest counties. For eastern Ohio, Columbiana, Carroll, southwest into Coshocton county around six inches of snow fell.

The National Weather Service in Pittsburgh PA confirmed a tornado in Uniontown and North Union Township in Fayette County, western Pennsylvania on February 15th. The tornado started near the intersection of Phillipi Avenue and Pittsburgh Street then traveled eastward for two miles before lifting near Kennedy Street. The worst damage was located between Monroe avenue and North Gallatin avenue where several buildings lost either part or their entire roof. A four level senior living building lost nearly half its roof. There was also numerous power lines down and a destroyed car port on North Gallatin Avenue. Several homes in the Greenpoint / Laurel estates area suffered damage to their roofs as well. The track just missed Laurel Highlands high school and continued just to the south of the school and lifted in the Woodview Terrace area. In that region, tree damage occurred. Through the entire path of the storm, hardwood trees were snapped or uprooted. Several pine trees were uprooted as well.

	02/16/18 10:00 EST		0	Source: Trained Spotter

Trained spotter reported that Chartiers creek was out of its banks flooding nearby roads.

Waves of heavy rain produced flooding on February 15th through the 16th. A line of thunderstorms developed along a lifting warm front, providing not only for enhancement in the rainfall totals, which ranged from 1-3 inches, but also attributed to shear that supported the development of a short-lived tornado over Uniontown, in Fayette county Pennsylvania. This was the first tornado in February since 1950 for the Pittsburgh Weather Service area of responsibility.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details

(PA-Z074) WESTMORELAND RIDGES, (PA-Z076) FAYETTE RIDGES

02/17/18 14:00 EST	0	Heavy Snow
02/18/18 04:00 EST	0	

A quick moving low pressure brought snow to parts of southwestern Pennsylvania, northern West Virginia, and western Maryland starting the afternoon of the 17th and ending early in the morning on the 18th. The snow started fast with 1-2" per hour accumulations. With a recent warm up, accumulation was largely confined to grassy surfaces. The highest snowfall totals fell in the mountains of northern West Virginia, western Maryland, and the Laurels of southwestern Pennsylvania, where the snow ranged from 6-8 inches in the highest peaks.

ALLEGHENY COUNTY --- 0.8 ENE EAST CARNEGIE [40.43, -80.06], 0.4 N EAST CARNEGIE [40.43, -80.07], 0.2 SSW EAST CARNEGIE [40.42, -80.07], 0.4 ESE EAST CARNEGIE [40.42, -80.06]

WESTMORELAND COUNTY --- 0.9 SE MARK ACRES [40.34, -79.71], 0.8 ESE MARK ACRES [40.34, -79.71], 1.0 ESE MARK ACRES [40.34, -79.70], 0.5 NW NORTH IRWIN [40.34, -79.71]				
	02/22/18 10:59 EST		0	Flood (due to Heavy Rain)
	02/22/18 13:00 EST		0	Source: State Official

State official reported that Paintertown Road was flooded.

WASHINGTON COUNTY --- 0.2 E JEWELL [40.07, -79.90], 0.2 ESE JEWELL [40.07, -79.90], 0.3 ESE JEWELL [40.07, -79.89], 0.4 ESE JEWELL [40.07, -79.89]

02/22/18 14:48 EST	0	Flood (due to Heavy Rain)
02/22/18 16:00 EST	0	Source: Public

The public reported that Pine Run was overflowing its banks onto Mechanic Street playground and onto Second Street.

Over-saturated ground lead to another round of flooding on Feb 22nd, despite rainfall amounts generally under an inch. Several landslides were reported as well as basement flooding in addition to road closures.

PUERTO RICO

(PR-Z001) SAN JUAN AND VICINITY, (PR-Z003) SOUTHEAST, (PR-Z008) NORTHWEST, (PR-Z011) SOUTHWEST

02/11/18 00:00 AST	4K	Strong Wind (MAX 44 kt)
02/13/18 00:00 AST	0	

An unusual strong surface high pressure, combined with a strong low pressure system, to produce a very tight pressure gradient across the area. As a result, strong low level winds dominated the region from February 11 through February 13, 2018. A wind advisory was issued for all Puerto Rico and the U.S. Virgin Islands.

PENUELAS COUNTY --- PENUELAS [18.05, -66.72], 0.6 E PENUELAS [18.05, -66.71]

02/25/18 14:00 AST	1K	Hail (0.25 in)
02/25/18 14:00 AST	0	Source: Public

Pea size hail was reported around 2 PM AST along road PR-132. Public and social media posts confirmed additional small hail reports.

Showers with thunderstorms developed in the afternoon hours due to the combination of a strong upper level trough and low level moisture. The activity developed across the Cordillera Central of Puerto Rico and moved southwestward along the southern slopes of Puerto Rico.

RHODE ISLAND

(RI-Z001) NORTHWEST PROVIDENCE, (RI-Z003) WESTERN KENT, (RI-Z006) WASHINGTON

02/14/18 06:30 EST	95K	Winter Weather
02/14/18 09:00 EST	0	

An area of light freezing rain moved across Rhode Island during the morning rush hour, causing numerous traffic accidents and a few road closures due to icing.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
CHEROKEE				
	02/04/18 04:00 EST		0	Winter Weather
	02/04/18 12:00 EST		0	

As a wave of low pressure developed and moved along a stationary front over the Deep South, moisture spread into the Upstate South Carolina during the early morning hours of the 4th. The precipitation began as a mixture of rain sleet and snow in many areas. While some light accumulation of sleet and snow was reported across the mountains, all areas transitioned to freezing rain by mid-morning. Ice accretion of .1 to .2 inch was common, but primarily confined to elevated surfaces and vegetation due to temperatures hovering right around freezing.

SOUTH CAROLINA, South Coastal

HAMPTON COUNTY --- MILEY [32.95, -81.03]

02/04/18 13:15 EST		1K	Thunderstorm Wind (EG 39 kt)

A tree was reported down along Interstate 95 near mile marker 15.

(SC-Z050) CHARLESTON

02/04/18 15:30 EST		1K	Strong Wind (MAX 39 kt)
02/04/18 15:31 EST	1	0	

A low-topped squall line moved across much of Southeast South Carolina late morning through mid-afternoon hours. The line, associated with little to no lightning, developed within a strongly forced environment and warm sector of a developing surface low across the Midlands of South Carolina. Despite the absence of surface-based instability, the squall line produced sporadic damaging wind gusts as it pushed toward to the South Carolina coast.

(SC-Z044) DORCHESTER

02/07/18 01:50 EST		2.50K	Strong Wind (MAX 39 kt)
02/07/18 01:51 EST		0	

Gusty wind conditions developed over the Southeast United States within a warm sector ahead of a cold front approaching from the west late in the day.

SOUTH DAKOTA, Central and North

(SD-Z003) CORSON, (SD-Z015) DEWEY

02/01/18 00:00 CST		0	Drought
02/28/18 23:59 CST		0	

The long term severe drought which began in early June continued across western Corson and into extreme northwest Dewey county throughout February.

With shallow cold air in place, warm advection associated with a weak wave of low pressure moving northeast from Kansas to Wisconsin produced a shield of light precipitation across southeast South Dakota. While precipitation was a mix of light snow and light freezing drizzle on February 19 which resulted in a light glaze of ice accumulation, a second round of precipitation late on February 19 and early on February 20 brought a dusting of one to three inches of snow.

(SD-Z038) BEADLE, (SD-Z039) KINGSBURY, (SD-Z040) BROOKINGS, (SD-Z050) GREGORY, (SD-Z052) JEREAULD, (SD-Z053) SANBORN, (SD-Z054) MINER, (SD-Z055) LAKE, (SD-Z056) MOODY, (SD-Z057) BRULE, (SD-Z058) AURORA, (SD-Z059) DAVISON, (SD-Z060) HANSON, (SD-Z061) MCCOOK, (SD-Z063) CHARLES MIX, (SD-Z064) DOUGLAS, (SD-Z065) HUTCHINSON, (SD-Z068) BON HOMME, (SD-Z069) YANKTON	02/19/18 10:00 CST		0	Winter Weather

02/23/18 01:00 CST	0	

A second disturbance in three days traversed the deep western trough, and the associated jet streak produced another area of widespread light to moderate snowfall across southeast South Dakota. Outside a narrow band of heavier snowfall from near Wagner to Salem to Brookings, amounts generally varied from 3 to 6 inches.

(SD-Z040) BROOKINGS, (SD-Z055) LAKE, (SD-Z061) MCCOOK, (SD-Z063) CHARLES MIX, (SD-Z064) DOUGLAS, (SD-Z065) HUTCHINSON

02/22/18 12:00 CST	0	Winter Storm
02/23/18 01:00 CST	0	

A second disturbance in three days traversed the deep western trough, and the associated jet streak produced another area of snowfall across southeast South Dakota. A narrow band of heavier snowfall produced accumulations from 5 to 8 inches.

(SD-Z038) BEADLE, (SD-Z039) KINGSBURY, (SD-Z040) BROOKINGS, (SD-Z050) GREGORY, (SD-Z052) JERAULD, (SD-Z053) SANBORN, (SD-Z054) MINER, (SD-Z055) LAKE, (SD-Z056) MOODY, (SD-Z057) BRULE, (SD-Z058) AURORA, (SD-Z059) DAVISON, (SD-Z060) HANSON, (SD-Z061) MCCOOK, (SD-Z062) MINNEHAHA, (SD-Z063) CHARLES MIX, (SD-Z064) DOUGLAS, (SD-Z065) HUTCHINSON, (SD-Z066) TURNER, (SD-Z067) LINCOLN, (SD-Z068) BON HOMME, (SD-Z069) YANKTON, (SD-Z070) CLAY, (SD-Z071) UNION

02/24/18 07:00 CST	0	Winter Weather
02/24/18 15:00 CST	0	

Ejection of the main upper level wave (which had already steered a pair of snow producing systems across the area during the prior week) brought yet another light to moderate snowfall over northwest Iowa, southeast South Dakota, northeast Nebraska and southwest Minnesota. While it generally snowed for five to eight hours at most across southeast South Dakota, a majority of that time found visibility of a mile or less. Snowfall amounts were mainly 1 to 2 inches across far east and southeast South Dakota, and 3 to 5 inches from south central South Dakota into east central South Dakota. As a result of the snowfall rate, roads rapidly became snow-covered and hazardous.

SOUTH DAKOTA, West

(SD-Z024) NORTHERN BLACK HILLS

02/03/18 12:00 MST	0	Heavy Snow
02/04/18 03:00 MST	0	

A storm system brought locally heavy upslope snowfall to the northern Black Hills. Snowfall amounts of four to eight inches fell across the area. Breezy northwest winds produced some patchy blowing snow and reduced visibility.

(SD-Z001) HARDING, (SD-Z012) BUTTE, (SD-Z013) NORTHERN MEADE CO PLAINS, (SD-Z014) ZIEBACH, (SD-Z025) NORTHERN FOOT HILLS, (SD-Z072) STURGIS / PIEDMONT FOOTHILLS, (SD-Z073) SOUTHERN MEADE CO PLAINS

02/08/18 00:00 MST	0	Winter Storm
02/09/18 02:00 MST	0	

A storm system brought a band of heavy snow to portions of northwestern South Dakota. Snow amounts of six to 12 inches fell from western and southern Harding County to northern Butte, northern Meade, and Ziebach Counties. A narrow band of heavy snow also developed over the northeastern foothills of the Black Hills from Whitewood to Piedmont.

(SD-Z027) SOUTHERN FOOT HILLS, (SD-Z029) SOUTHERN BLACK HILLS, (SD-Z041) FALL RIVER, (SD-Z042) OGLALA LAKOTA

02/08/18 18:00 MST	0	Winter Storm
02/09/18 12:00 MST	0	

A winter storm brought a band of heavy snow to portions of southwestern South Dakota. Total snowfall of six to 12 inches was reported over much of Fall River County, the southern Black Hills, and southern Oglala Lakota County. Hot Springs received as much as 15 inches.

Jackson County Emergency Management reported several portions of the Dodson Branch Highway (TN 135) along the Roaring River east of Gainesboro were flooded and closed.

Another heavy rain event brought 1 to 3 inches of rain to all of Middle Tennessee from February 9 into February 10. Several reports of flooding were received.

ROBERTSON COUNTY --- 5.2 NE ADAMS [36.64, -87.01], 5.6 WNW BARREN PLAIN [36.64, -87.00]

	02/24/18 15:53 CST		25K	Tornado (EF1, L: 0.54 mi , W: 150 yd)
	02/24/18 15:54 CST		0	Source: NWS Storm Survey

An EF-1 tornado began a half mile south of the Kentucky/Tennessee state line between Hugh Gill Road and Keysburg Road with numerous trees snapped and uprooted. The tornado moved northeast destroying the roof of a barn on Hugh Gill Road before hitting a home on McGhee Road causing significant roof and chimney damage. Maximum winds in Tennessee were estimated to be 95 mph. The tornado then moved into Kentucky where it intensified and traveled for another 11.3 miles, causing EF-2 damage. Please refer to NWS Louisville and Kentucky Storm Data for more information on the Kentucky portion of the path.

HUMPHREYS COUNTY --- 7.9 W CONCORD [36.23, -87.91]

An EF-1 tornado touched down near the Dotsonville community along Dotsonville Road at Bradley A. Martin Road and moved northeast. Trees were blown down and a few homes suffered minor roof damage on Gip Manning Road and Hunting Creek Road. Hundreds of trees were snapped or uprooted and 12 to 15 homes were damaged on Martin Road, Deepwood Drive, and Deepwood Trail with two homes severely damaged. More trees were blown down east of Rustys Lane and along the Cumberland River before the tornado lifted. Montgomery County Emergency Management estimated damage at 1 million dollars.

An EF-2 tornado touched down in eastern Clarksville on Dunbar Cave Road and moved east-northeast across Interstate 24 north of Rossvie Road before ending on Kirkwood Road. Several trees were blown down at the beginning of the path north of Dunbar Cave Road. Continuing northeast, several outbuildings were damaged at the Rossvie High School football stadium. The tornado crossed I-24 and struck an industrial complex where three buildings were damaged and 75 cars in a parking lot sustained minor damage. The tornado intensified as it crossed Rollow Lane, blowing the roof off one home and downing numerous trees. Four duplexes lost their roofs on Holland Drive and many others were severely damaged. Dozens of homes sustained roof and exterior damage in the Farmington subdivision along Covey Rise Circle, Bainbridge Drive, Green Grove Way, and Edgewater Lane, and one home on Green Grove Way at Covey Rise Circle was shifted off its foundation and completely destroyed, causing two injuries. Another home was heavily damaged west of Gardenia Lane in an area of new homes before the tornado moved across open fields. The last damage was some uprooted trees on Kirkwood Road. Maximum winds were estimated to be 125 mph. Montgomery County Emergency Management estimated the damage from this tornado at 7 million dollars.				
ROBERTSON COUNTY --- 1.9 ENE ADAMS [36.59, -87.04], 3.7 W BARREN PLAIN [36.61, -86.99]

02/24/18 22:33 CST	0	Source: Emergency Manager

Numerous trees were blown down across Wayne County.

An intense storm system brought severe thunderstorms to northwest Middle Tennessee during the late afternoon and evening hours on February 24. One supercell thunderstorm developed along a warm front that moved northward across the area during the afternoon, spawning one tornado along the Kentucky/Tennessee border in Robertson County that then moved northeast into Kentucky. Later in the evening, a Quasi-Linear Convective System (QLCS) moved into the area from the west, spawning three more tornadoes across Montgomery and Robertson Counties which damaged dozens of homes and businesses and caused millions of dollars in damage. The QLCS also caused wind damage in several other counties.

	02/21/18 05:41 CST		0	Winter Storm
	02/21/18 14:00 CST	4	0	
A Winter Storm impacted the Big Country during the morning and early afternoon of February 21. With surface temperatures in the middle to upper 20s, heavy sleet mixed with freezing rain fell across the Big Country. This freezing precipitation resulted in numerous school closures and traffic accidents. As the heavy precipitation ended by early afternoon on February 21, light freezing drizzle continued through the night across the Big Country into the early afternoon on February 22. The weight of the ice resulted in some downed tree branches across the area.				
The heavy sleet and freezing rain abated by the early afternoon on February 21 and became freezing drizzle as it continued across the remainder of West Central Texas, south of Interstate 20 during the night of February 21 and into the morning on February 22. This continued to cause ice to accumulate on some roads, bridges, elevated objects and trees.				
These conditions lead to a multiple vehicle pileup on Interstate 10 near Sonora. Many school districts across West Central Texas began school about two hours late on February 22.				
(TX-Z114) SHACKELFORD				
	02/26/18 05:50 CST		0	Wildfire
	02/27/18 16:24 CST		0	
Windy and dry conditions led to critical wildfire conditions. The Newell Wildfire burned a a large area about 8 miles east southeast of Leuders.				
SAN SABA COUNTY --- 3.0 E SAN SABA [31.20, -98.68]				
	02/28/18 23:11 CST		0	Thunderstorm Wind (EG 61 kt)
	02/28/18 23:11 CST		0	Source: Public
The public reported and sent pictures of roof damage to a residential home and uprooted large trees about 2.5 miles east of San Saba.				
A line of thunderstorms resulted in an isolated area of damaging winds near San Saba.				

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
WHARTON COUNTY --- 0.2 S LANE CITY [29.22, -96.03]				
	02/25/18 01:45 CST		0	Thunderstorm Wind (EG 50 kt)
	02/25/18 01:48 CST		0	Source: Public

Thunderstorm wind gusts blew down some fencing around the town of Lane City.

A thunderstorm passed across the southwestern forecast area and produced damaging winds.

TEXAS, Mid - South

(TX-Z234) VICTORIA, (TX-Z246) REFUGIO				
	02/01/18 00:00 CST		0	Drought
	02/20/18 00:00 CST		0	

Severe drought conditions developed from Victoria to Refugio during the early part of the month. Rainfall across the area on the 20th alleviated the drought conditions to moderate levels.

TEXAS, North

(TX-Z091) MONTAGUE, (TX-Z092) COOKE, (TX-Z100) YOUNG, (TX-Z101) JACK, (TX-Z102) WISE, (TX-Z103) DENTON, (TX-Z115) STEPHENS, (TX-Z116) PALO PINTO, (TX-Z117) PARKER, (TX-Z129) EASTLAND, (TX-Z130) ERATH, (TX-Z131) HOOD, (TX-Z141) COMANCHE, (TX-Z142) MILLS, (TX-Z145) HILL, (TX-Z156) LAMPASAS, (TX-Z160) FALLS				
	02/01/18 00:00 CST		0	Drought
	02/21/18 00:00 CST		0	

Severe drought conditions developed across several locations generally along and west of the Interstate 35 corridor by early February. Significant rainfall during the Feb 20-28 time frame led to much improved conditions for the majority of the region by the end of the month.

(TX-Z157) CORYELL, (TX-Z158) BELL, (TX-Z159) MCLENNAN				
	02/01/18 00:00 CST		0	Drought
	02/28/18 23:59 CST		0	

Severe drought conditions developed over parts of Central Texas by the first of February. Some of these locations missed out on beneficial rains which occurred across much of the region, allowing severe drought conditions to linger through the end of the month.

Nickel size hail fell in the Hideaway Lake Subdivision.

SMITH COUNTY --- 1.3 SW LINDALE [32.51, -95.42]

02/06/18 16:25 CST			0	Hail (1.00 in)
02/06/18 16:25 CST			0	Source: Amateur Radio

Quarter size hail fell on the southwest wide of Lindale.

A cold front moved southeast across Northeast Texas, Southwest Arkansas, and Northern Louisiana during early morning hours of February 6th. Meanwhile, overrunning increased during the daytime hours which led to the development of scattered showers behind the front, which developed into embedded thunderstorms as upper level disturbances shifted northeast across the area enhancing large scale lift, ahead of an upper level shortwave trough which moved into the Southern Plains during the afternoon from the Four Corners region. Steep lapse rates ahead of this shortwave trough contributed to elevated instability aloft, with deep layer shear also adequate enough for some organized post-frontal thunderstorms within a cool air mass with surface temperatures in the lower 50s. As a result, a few of these storms became severe, producing numerous reports of small and large hail across portions of Northeast Texas during the afternoon hours. The strong to severe thunderstorms diminished by early evening as the post-frontal rains became more widespread across the area, thus diminishing the elevated instability.

----------	-----------	-------------------	---------------------	------------------------

developing around midnight throughout the early morning hours on February 11th across portions of Northeast Texas, resulting in icing of bridges across Lake Cypress Springs in Franklin County, as well as vehicles and elevated objects in Red River and Smith Counties.

Temperatures remained at or below freezing across much of Northeast Texas during the daytime hours on February 11th, as a weak upper level disturbance traversed Northern and Eastern Texas. Scattered areas of light freezing rain mixed with sleet fell across portions of Northeast Texas, with light accumulations of sleet on grassy and road surfaces, as well as bridges and overpasses throughout Smith, Wood, and Upshur Counties. Elsewhere across Northeast Texas, only trace amounts of freezing rain and sleet were recorded, with very little if any impacts observed.

In Smith County, 0.2 inches of sleet was recorded at Tyler, as well as areas from Lake Palestine near the Teaselville community to Flint, Whitehouse, and Bullard. In Wood County, 0.1 inches of sleet was recorded in Mineola and Quitman. In Upshur County, 0.1 inches of sleet was recorded near Big Sandy.

RED RIVER COUNTY --- 0.4 SSW KANAWHA [33.86, -95.25], 0.9 WNW HALESBORO [33.45, -95.31], 1.0 S LYDIA [33.44, -94.77], 2.7 SSE RIVER VIEW [33.68, -94.75], 3.2 W DAVENPORT [33.93, -95.19]

High water on FM 1254 northeast of Mineola.				
<p>An upper level low pressure system progressed east southeast from the Pacific Northwest into the Central and Southern Rockies on the morning of February 20th, reinforcing a cold front slowly southeast into Southeast Oklahoma, Northeast Texas, and Southwest Arkansas during the early morning hours of February 21st. A deep southwest flow aloft was present along and behind the front across the Southern Plains and Mississippi Valley, with weak embedded disturbances in the flow helping to enhance the development of scattered to numerous showers and thunderstorms along and behind the front. A warm, moist, and weakly unstable air mass spread north ahead of the front into Northeast Texas, Southeast Oklahoma, Southwest Arkansas, and North Louisiana, with the southwest flow aloft tapping into the subtropical jet, thus transporting Pacific moisture northeast along and behind the front. Periods of moderate to at times, heavy rainfall fell along and behind the front across Northeast Texas during the evening hours on the 20th through much of the 21st before gradually diminishing during the late evening hours. However, additional periods of moderate to heavy rain spread across much of East Texas on February 22nd north of the cold front, and continued through the morning hours on the 23rd. Widespread rainfall amounts of four to in excess of nine inches fell across much of East Texas during this 3 day period, resulting in widespread flash flooding.</p>				
FRANKLIN COUNTY --- 1.5 NNE EUREKA [33.37, -95.31], 0.9 WNW HAGANSPORT [33.35, -95.25], 5.3 ENE HAGANSPORT [33.37, -95.14], 5.3 ENE HAGANSPORT [33.38, -95.14], 1.7 NNW HAGANSPORT [33.37, -95.24], 2.4 NE EUREKA [33.37, -95.29]				
	02/22/18 08:00 CST		0	Flood (due to Heavy Rain)
	02/24/18 18:15 CST		0	Source: River/Stream Gage
Widespread heavy rainfall of ten to in excess of twelve inches across the Sulphur River basin of Northeast Texas during the final week of February resulted in rapid rises on the Sulphur River north of Talco, with the river cresting at 26.81 feet during the early evening hours on February 22nd. This resulted in major backwater flooding along the river, with numerous secondary roads (and State Highway 37) flooded across Southern Red River and Northern Franklin Counties.				

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
RED RIVER COUNTY --- 2.1 SSW HALESBORO [33.42, -95.31], 4.8 S HALESBORO [33.38, -95.31], 5.1 SW JOHNTOWN [33.37, -95.24], 3.6 SW JOHNTOWN [33.38, -95.21], 3.6 E MOBBERLY [33.40, -95.09], 4.8 W HARTS BLUFF [33.39, -95.05], 4.5 S CUTHAND [33.41, -95.06]				
	02/22/18 08:00 CST		0	Flood (due to Heavy Rain)
	02/24/18 18:15 CST		0	Source: River/Stream Gage

Widespread heavy rainfall of ten to in excess of twelve inches across the Sulphur River basin of Northeast Texas during the final week of February resulted in rapid rises on the Sulphur River north of Talco, with the river cresting at 26.81 feet during the early evening hours on February 22nd. This resulted in major backwater flooding along the river, with numerous secondary roads (including State Highway 37) flooded across Southern Red River and Northern Franklin Counties.

Widespread heavy rainfall resulted in major flooding along the Sulphur River in Northeast Texas during the final week of February.

SMITH COUNTY --- 6.7 NNE GARDEN VLY [32.61, -95.48], 5.5 N LINDALE [32.60, -95.39], 5.9 NW RED SPGS [32.60, -95.33], 3.5 NNW RED SPGS [32.58, -95.29], 2.3 N RED SPGS [32.56, -95.27], 4.4 NNE LINDALE [32.58, -95.37], 4.8 NNW LINDALE [32.58, -95.43]				
	02/22/18 18:00 CST		0	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Widespread heavy rainfall of eight to ten inches across the Sabine River basin of Northeast Texas during the final week of February resulted in rapid rises on the Sabine River south of Mineola, with the river cresting at 18.69 feet during the evening hours on February 27th. This resulted in moderate backwater flooding along the river, inundating some barns and secondary roads including FM 1804 in Southern Wood and Northern Smith Counties.

WOOD COUNTY --- 2.9 WSW HOARD [32.61, -95.45], 3.8 S MINEOLA [32.61, -95.48], 1.8 S NEW HOPE [32.60, -95.39], 1.6 SSE DEBBIE [32.61, -95.36]				
	02/22/18 18:00 CST		0	Flood (due to Heavy Rain)
	02/28/18 23:59 CST		0	Source: River/Stream Gage

Widespread heavy rainfall of eight to ten inches across the Sabine River basin of Northeast Texas during the final week of February resulted in rapid rises on the Sabine River south of Mineola, with the river cresting at 18.69 feet during the evening hours on February 27th. This resulted in moderate backwater flooding along the river, inundating some barns and secondary roads including FM 1804 in Southern Wood and Northern Smith Counties.

Widespread heavy rainfall during the final week of February resulted in moderate flooding across the Sabine River of Northeast Texas near Mineola across Southern Wood and Northern Smith Counties.

HARRISON COUNTY --- 5.4 ENE HALLSVILLE [32.52, -94.48]				
	02/24/18 16:20 CST		0	Thunderstorm Wind (EG 56 kt)
	02/24/18 16:20 CST		0	Source: Law Enforcement

Power lines were blown down between Hallsville and Marshall.

A warm front lifted north into Eastern Oklahoma and Central Arkansas during the morning hours of February 24th, resulting in a large warm and humid air mass across the Ark-La-Tex region. Meanwhile, showers and thunderstorms increased across North Texas during the morning as well, ahead of a strong upper trough that ejected east across the Southern Plains and Mississippi Valley. This trough also drove an attendant cold front into East Texas during the afternoon, with numerous showers and thunderstorms noted along and ahead of the front. The air mass ahead of the front was moderately unstable, allowing an isolated severe thunderstorm to develop over Western Harrison County Texas, which downed power lines between Hallsville and Marshall.

TEXAS, South Central

(TX-Z171) LLANO, (TX-Z172) BURNET				
	02/01/18 00:00 CST		0	Drought
	02/27/18 07:00 CST		0	

A heavy rain event on the 20-21 dropped one to four inches of rain over Llano and Burnet Counties and this was enough to move them out of severe drought category.

A series of low pressure systems moved across central, southern Vermont with a redeveloping coastal low off the New England shoreline. A prolonged period of light to moderate snow fell across the region with scattered heavier snowfalls as well. A widespread 2 to 5 inches of snow fell across the region with 6 to 12 inches across portions of southern VT and the Northeast Kingdom.

Low pressure moved from the Tennessee valley across southern New England on February 7th. It was a quick but potent system with duration of 6 to 8 hours and snowfall rates of an inch or more for several hours, which made for a hazardous evening commute. Snowfall accumulations of 5 to 10 inches were observed across much of Vermont.

VERMONT, South

	02/04/18 07:00 EST		0	Heavy Snow
	02/05/18 01:00 EST		0	

A complex storm system brought widespread moderate to heavy snowfall to southern Vermont. Snow overspread the region during the morning, fell heavy at times during the afternoon and early evening and started to taper off from west to east in the late evening hours. Snowfall totals ranged from 5.0 to 14.0 inches.

Water rescue in Powell Valley. Subject attempted to drive through high water and was pushed into the river. No injuries.

At 500 MB, a strong western Atlantic high pressure ridge and a deep low pressure trough over the High Plains were denoted at the surface by a slow-moving cold front over the Mississippi and Ohio River valleys. This resulted in unseasonably warm and humid conditions across east Tennessee and southwest Virginia, and widespread heavy rains.

VIRGINIA, Northwest

(VA-Z003) DICKENSON, (VA-Z004) BUCHANAN

	02/01/18 20:00 EST	0	Winter Weather
	02/02/18 10:00 EST	0	

A strong Arctic cold front moved across the region on the 1st. Temperatures were warm ahead of the front, and a lot of the precipitation fell as rain. However, cold air rushed in during the evening, changing the rain to snow. Around 3 inches of snow fell from late on the 1st into the morning of the 2nd. For example, the cooperative observer at Nora in Dickenson County, measured 3.8 inches, while reports on social media indicated only 2-3 inches in lower elevation parts of the county.

BUCHANAN COUNTY --- 1.5 NE BREAKS [37.31, -82.26], 0.3 WNW DAVENPORT [37.10, -82.13], 2.4 SE JEWELL VLY [37.22, -81.79], 2.9 NW PAYNESVILLE [37.35, -81.94], 3.7 ENE KELSA [37.48, -82.01]

	02/10/18 17:00 EST	0	Flood (due to Heavy Rain)
	02/11/18 12:00 EST	0	Source: 911 Call Center

Multiple creeks and streams across the county flooded, including War Fork near Prater which closed State Route 83. Lesters Fork near Hurley also flooded, closing Route 650. the flood gates were closed in Grundy to keep water from the Levisa Fork from entering the city. Low lying areas around Davenport were flooded by high water on Hurricane Creek and Russell Fork. The Russell Fork also caused flooding of low lying areas in the community of Council.

DICKENSON COUNTY --- 0.5 SSE OSBORNS GAP [37.19, -82.55], 3.1 NE BARTLICK [37.28, -82.29], 1.8 SSW DUTY [37.06, -82.16], 1.6 W TRAMMEL GAP [36.98, -82.35], 0.9 SE IBEX [37.04, -82.47]

	02/10/18 17:00 EST	0.20M	Flood (due to Heavy Rain)
	02/11/18 11:00 EST	0	Source: Emergency Manager

Water from flooding along Crooked Branch got into Dyers Chapel near Clinchco, and covered some equipment at a nearby well services business. Several drivers had to be rescued after driving into high water near Haysi. At least 8 people had to be rescued throughout the night, but fortunately there were no injuries. Social media pictures showed a number of vehicles parked in private driveways were flooded.

An earthen dam failed at Camp Jacob in the far southwest corner of the county, draining the nearly 10 acre lake and causing significant damage to the camp.

Many roads were flooded across the county. This included US Route 460, due to high water along Levisa Fork and Slate Creek. County Route 611 was closed due to flooding from Barts Lick Creek, and County Route 608 due to water from Doe Branch. Route 637 was closed due to flooding along the Cranes Nest River and Lick Branch, and Route 612 was under water due to Laurel Creek and Georges Fork. Bearpen Creek also flooded near Isom. Several private roads and bridges across the county were also washed out.

The Russell Fork River at Haysi rose above its flood stage of 19 feet on the evening of the 10th. The river crested at about 20.5 feet just after midnight on the 11th, and returned to its banks by sunrise. This caused flooding along parts of Route 63 and 80/83. Minor water also effected the park and some businesses in Haysi.

The Cranes Nest River in Clintwood also surged out of its banks on the evening of the 10th. It rose to just over 14.5 feet by midnight, about a foot and a half over bankfull level, and returned to its banks during the pre-dawn hours of the 11th. This flooded a section of Route 649 as well as several camps along the river.

A frontal system was draped across the central Appalachians on the 10th and 11th. As waves moved along the front, periods of heavy rainfall moved across Southwestern Virginia. Rainfall started during the morning of the 10th, with the heaviest rain from late afternoon overnight into the 11th. Three to four inches of rain fell over the 24 hour period, which lead to widespread flooding from the afternoon of the 10th, into the 11th. The cooperative observer at Nora in Dickenson County measured 4.04 inches of rainfall from the storm and a trained spotter in Clintwood measured 3.25 inches. In Buchanan County, the cooperative observer at Grundy measured 3.52 inches of rain and a mesonet gauge on Keen Mountain measured 3.04 inches. Dickenson County was placed under a state of emergency, and voluntary evacuation were started for the most flood prone spots in the county. A state of emergency was also declared by Buchanan County officials.

As the water drained through creeks and streams and into the rivers, river flooding occurred on the Russell Fork River and Cranes Nest River. John W. Flannagan Lake jumped 20 feet in just 24 hours, as the US Army Corps of Engineers shut down the dam's outflow to lessen river flooding in the region.

DICKENSON COUNTY --- 1.4 WNW VICEY [37.23, -82.27], 0.9 W DARWIN [37.10, -82.52], 1.7 SE IBEX [37.03, -82.46], 2.0 NW BEE [37.14, -82.20]

The Roanoke (Staunton) River crested at 21.55 feet just slightly over Minor Flood stage of 21 feet toward midday on the 12th.

HALIFAX COUNTY --- 2.7 E NEWS FERRY [36.68, -78.98], 0.5 SE SOUTH BOSTON [36.70, -78.89], 0.9 SE SOUTH BOSTON [36.69, -78.89], 2.9 E NEWS FERRY [36.67, -78.98]

	02/12/18 06:00 EST	0	0	Flood (due to Heavy Rain)
	02/13/18 18:00 EST	0	0	Source: River/Stream Gage

The Dan River at South Boston crested at 19.96 feet just over Minor Flood Stage (19 ft.) during the evening of the 12th. The Roanoke (Staunton) River also exceeded minor flood stage in far eastern Halifax County along the Charlotte County line.

A broad upper level trough with a slow-moving frontal boundary brought an extended period of mainly light to moderate rainfall that began on the afternoon of the 10th and persisted well into the evening of the 11th. Several rivers reached flood stage and a number of roads were reported closed. Rainfall amounts ranged from 2 to 3 inches in a 24-hour period ending at 7 AM EST on the 11th and for many locations it was one of the wettest February days on record. 48-hour storm total rainfall (ending 7 AM EST) on the 12th reached 4 to 5 inches in several locations.

wake of a frontal passage caused scattered power outages due to trees interacting with power lines in the Wenatchee and Entiat area. The highest recorded wind gust was 52 mph at the Wenatchee airport.

(WA-Z033) WASHINGTON PALOUSE, (WA-Z035) UPPER COLUMBIA BASIN, (WA-Z036) SPOKANE AREA, (WA-Z037) NORTHEAST MOUNTAINS

	02/13/18 18:00 PST		0	Heavy Snow
	02/14/18 18:00 PST		0	

During the night of February 13th a surface low pressure formed over eastern Washington and tracked southeastward into central Idaho on February 14th before weakening. The western Columbia Basin received minor accumulations of snow which quickly melted during the day, however the rising terrain of the eastern basin including the Palouse region and the Spokane area as well as the northeastern mountains of Washington were north of the track and under the most intense precipitation from this storm. Widespread heavy snow accumulations resulted.

(WA-Z037) NORTHEAST MOUNTAINS, (WA-Z038) OKANOGAN HIGHLANDS, (WA-Z042) EAST SLOPES NORTHERN CASCADES

	02/17/18 01:00 PST		0	Heavy Snow
	02/18/18 16:00 PST		0	

A stationary front laying west to east over eastern Washington and north Idaho on February 17th developed into surface low pressure and finally an Arctic cold front which sagged southward through the region during the day of February 18th. A fetch of Pacific moisture fed into the surface low and enhanced into a period of moderate intensity snow during the day of February 17th and into the morning of the 18th. Heavy snow accumulations resulted over the Cascades and northeast Washington mountains. This storm also brought lesser but still significant accumulations of snow to the Spokane area and the Palouse region before very dry Arctic air descending out of Canada behind the front effectively ended precipitation over the region.

(WA-Z033) WASHINGTON PALOUSE

	02/24/18 07:00 PST		0	Heavy Snow
	02/24/18 13:00 PST		0	

(WA-Z033) WASHINGTON PALOUSE

	02/25/18 11:00 PST		1K	Strong Wind (MAX 39 kt)
	02/25/18 12:00 PST		0	

A weather disturbance passing through the region on February 24th brought locally heavy snow accumulations to the Washington Palouse region. A second subsequent storm right on it's heels on February 25th brought little additional snow but did generate breezy conditions which caused locally severe drifting and blowing of the previous day's snow on the exposed terrain of the Palouse.

(WA-Z042) EAST SLOPES NORTHERN CASCADES

	02/28/18 20:00 PST		0	Heavy Snow
	02/28/18 23:59 PST		0	

Beginning during the evening of the 28th of February and continuing through the 2nd of March a slow moving frontal band brought an extended period of wet snow to the Cascades, The Okanogan Highlands and the Northeast Mountains and the higher terrain of the western Columbia and Okanogan River valleys. The accumulating snow was very elevation dependent with only a few hundred feet elevation making the difference between little or no accumulation and accumulations of upwards of a foot of very wet heavy snow. The East Slopes of the Cascades began to accumulate snow during the evening of the last day of February, with the area of precipitation spreading eastward during the first two days of March.

02/07/18 09:00 EST	0	

Low pressure moved up the western side of the Appalachians Tuesday night, February 6th into the morning hours of Wednesday, February 7th. Initially the precipitation started as snow across the upper Ohio Valley. As the warm air surged north, precipitation type changed to a wintry mix of sleet and freezing rain. Locations in northern West Virginia and southwestern Pennsylvania changed over to rain with temperatures climbing into the upper 30s to lower 40s. Eastern Ohio, the northern West Virginia Panhandle, and locations from central Beaver county, northeast into southern Jefferson county, Pennsylvania switched over to freezing rain. Ice accumulation was around a quarter of an inch for these places. Farther north along the I-80 corridor and parts of interior southeastern Ohio, cold air remained socked in, keeping the precipitation all snow. Several inches of snow fell with the highest amounts located across parts of northern Butler county northeast into Clarion, Jefferson, and Forest counties. For eastern Ohio, Columbiana, Carroll, southwest into Coshocton county around six inches of snow fell.

	02/16/18 19:00 EST		0	Source: Department of Highways

Department of highways reported high water across North Fork Road.

Waves of heavy rain produced flooding on February 15th through the 16th. A line of thunderstorms developed along a lifting warm front, providing not only for enhancement in the rainfall totals, which ranged from 1-3 inches, but also attributed to shear that supported the development of a short-lived tornado over Uniontown, in Fayette county Pennsylvania. This was the first tornado in February since 1950 for the Pittsburgh Weather Service area of responsibility.

(WV-Z512) EASTERN PRESTON				
	02/17/18 14:00 EST		0	Heavy Snow

	02/18/18 02:00 EST		0	

A quick moving low pressure brought snow to parts of southwestern Pennsylvania, northern West Virginia, and western Maryland starting the afternoon of the 17th and ending early in the morning on the 18th. The snow started fast with 1-2" per hour accumulations. With a recent warm up, accumulation was largely confined to grassy surfaces. The highest snowfall totals fell in the mountains of northern West Virginia, western Maryland, and the Laurels of southwestern Pennsylvania, where the snow ranged from 6-8 inches in the highest peaks.

OHIO COUNTY --- 1.0 N BETHLEHEM [40.06, -80.68], 1.2 NW BETHLEHEM [40.06, -80.69], 1.3 S WARWOOD [40.10, -80.70], 0.9 SSW WILLOW SPGS [40.14, -80.70], 0.9 ESE WARWOOD [40.11, -80.69]				
	02/22/18 08:53 EST		0	Flood (due to Heavy Rain)
	02/22/18 16:00 EST		0	Source: Emergency Manager

Emergency manager reported flooding on River Road as well as at National Road and Mt DeChantal Road along Wheeling Creek.

MARSHALL COUNTY --- GLENDALE [39.95, -80.75], 0.8 NE GLENDALE [39.96, -80.74], 0.8 S GLENDALE HGTS [39.96, -80.73], 0.7 SSE GLENDALE [39.94, -80.74], 0.7 SSW GLENDALE [39.94, -80.76]				
	02/22/18 09:21 EST		0	Flood (due to Heavy Rain)
	02/22/18 16:00 EST		0	Source: Emergency Manager

Emergency manager reported that Little Grave Creek was out of its banks near Glendale.

Over-saturated ground lead to another round of flooding on Feb 22nd, despite rainfall amounts generally under an inch. Several landslides were reported as well as basement flooding in addition to road closures.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

WEST VIRGINIA, Southeast

(WV-Z508) WESTERN GREENBRIER

02/02/18 00:00 EST		0		Winter Storm
02/02/18 12:00 EST		0		

Bands of locally heavy snow occurred across western Greenbrier County in the wake of a strong cold front. A plume of moisture off of Lake Michigan interacted with a combination of strong lift associated with a passing upper level disturbance and orographic lift on the eastern side of the Appalachians, resulting in a brief period of enhanced snowfall rates.

GREENBRIER COUNTY --- 0.5 NW WHITE SULPHUR SPGS [37.79, -80.31]

02/10/18 07:00 EST		0		Heavy Rain
02/11/18 07:00 EST		0		Source: COOP Observer

The COOP site at White Sulphur Springs (WSUW2) measured 1.72 inches of rain for the 24-hour period ending 12z (7 AM) on February 11. This was the 3rd highest 1-day total for any February day since continuous records began there in 1922 (with sporadic data back to 1888).

SUMMERS COUNTY --- 0.5 WSW ALDERSON [37.73, -80.66]

02/10/18 07:00 EST		0		Heavy Rain
02/11/18 07:00 EST		0		Source: COOP Observer

The COOP site at Alderson (ALDW2) measured 1.90 inches of rain for the 24-hour period ending 12z (7 AM) on February 11. This was the 3rd highest 1-day total for any February day since records began there in 1946.

SUMMERS COUNTY --- 0.6 SSW BELLEPOINT [37.64, -80.88]

02/10/18 07:00 EST		0		Heavy Rain
02/11/18 07:00 EST		0		Source: COOP Observer

The COOP site at Bluestone Lake (BLUW2) measured 2.13 inches of rain for the 24-hour period ending 12z (7 AM) on February 11. This was the highest 1-day total for any February day since records began there in 1944.

GREENBRIER COUNTY --- 0.7 NNE CHARMCO [38.01, -80.72], 2.0 WSW RENICK [37.96, -80.40], 2.4 SSW SHRYOCK [37.92, -80.17], 2.5 S TUCKAHOE [37.71, -80.27], 4.1 WSW CRAIG [37.88, -80.82]

02/10/18 18:00 EST		0		Flood (due to Heavy Rain)
02/11/18 18:00 EST		0		Source: Emergency Manager

Two water rescues were made after people drove into high water in the county. Several streams were reported to be out of banks including Muddy Creek, Little Sewell Creek and Anthony Creek. There were a number of other reports of flooding from around Greenbrier County. Tunnels at Monroe Draft, Harts Run and Tuckahoe Road were flooded. Route 60 in Hines, Snake Run Road in the Blue Sulphur Springs area and Blue Bend Road near Alvon all had reports of high water. Four people were evacuated due to concerns of water around their house.

MONROE COUNTY --- 3.2 N RED SULPHUR SPGS [37.55, -80.78], 3.1 N RED SULPHUR SPGS [37.54, -80.77], 1.2 NNE RED SULPHUR SPGS [37.52, -80.77], 1.6 N RED SULPHUR SPGS [37.52, -80.77]

02/10/18 22:00 EST		0		Flood (due to Heavy Rain)
02/11/18 14:00 EST		0		Source: River/Stream Gage

Indian Creek near Red Sulphur Springs crested at 10.11 feet (Minor Flood stage - 8 ft.) early on the 11th. At least one road was closed due the flooding.

MERCER COUNTY --- 1.1 ESE COALDALE [37.34, -81.33], 0.8 SE (BLF)MERCER CO ARPT [37.29, -81.21], 1.6 ESE LILLY GROVE [37.37, -81.05], 3.7 NNE LERONA [37.55, -80.96], 3.8 SSE BARN [37.52, -81.15], 0.4 WSW LAMAR [37.45, -81.31]

02/11/18 00:18 EST		0		Flood (due to Heavy Rain)
02/11/18 18:00 EST		0		Source: 911 Call Center

Flooding was reported from several locations across Mercer County. Portions of Route 10 in near Lake Bottom in the town of Lashmeet were closed due to high water. In the town of Princeton Ingleside Road and Stafford Drive were reported closed due to high water. The Bluestone River flooded along much of its course through the county. The IFLAWS gauge on the Bluestone River at Spanishburg crested at 13.7 feet (Minor flood stage - 12 ft.) during the evening of February 11th. Portions of Route 19 were flooded by the river to a depth of several feet. This was the highest crest since March 2015 at the Spanishburg gauge. Further downstream on the Bluestone River at Pipestem (PIPW2) the the crest of 11.88 feet (Minor flood stage - 10 ft.) was also the highest since 2015.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A broad upper level trough with a slow-moving frontal boundary extending from Texas to upstate New York brought an extended period of mainly light to moderate rainfall that began on the afternoon of the 10th and persisted well into the evening of the 11th. Storm total rainfall amounts ranged from 1.5 to 3 inches across southeast West Virginia with the highest totals in western Mercer County. Egeria IFLOWS (EGRW2) had the highest 48-hour gauge total with 3.26 inches ending at 7 AM EST on the 12th of which 2.74 inches fell in the 24-hours ending at 7 AM on the 11th. The flooding that resulted was not really of the flash type but was more gradual.

WEST VIRGINIA, West

(WV-Z033) MCDOWELL, (WV-Z034) WYOMING, (WV-Z515) NORTHWEST RALEIGH, (WV-Z517) NORTHWEST FAYETTE, (WV-Z521) NORTHWEST WEBSTER, (WV-Z522) SOUTHEAST WEBSTER, (WV-Z523) NORTHWEST POCAHONTAS

02/01/18 20:00 EST	0	Winter Weather
02/02/18 10:00 EST	0	

(WV-Z515) NORTHWEST RALEIGH, (WV-Z518) SOUTHEAST FAYETTE, (WV-Z519) NORTHWEST NICHOLAS

02/01/18 20:00 EST	0	Heavy Snow
02/02/18 10:00 EST	0	

A strong Arctic cold front moved across the region on the 1st. Temperatures were warm ahead of the front, and a lot of the precipitation fell as rain. However, cold air rushed in during the evening, changing the rain to snow. Moisture was already pulling out of the lowlands by this time, but enough remained across the southern and central mountainous counties to give a quick dose of accumulating snow. The highest amounts were measured in southeastern Raleigh and Fayette counties, where 5 to 7 inches of snow accumulated from the 1st into the morning of the 2nd. The snow observer near the Beckley Airport measured 6.8 inches, and the cooperative observer at the VA Hospital in Beckley got 5.5 inches. Around 5 inches was reported in the southeastern portions of Fayette and Nicholas Counties by broadcast media and CoCoRAHS observers. There very highest elevations of Pocahontas, Randolph and Webster got 4 to 6 inches.

Outside of these higher amounts, generally 1 to 3 inches of snow accumulated across the southern Coal Fields and mountainous counties.

(WV-Z523) NORTHWEST POCAHONTAS, (WV-Z526) SOUTHEAST RANDOLPH

02/04/18 04:00 EST	0	Winter Weather
02/05/18 07:00 EST	0	

A period of northwest flow following a cold front lead to up slope type snow showers on the 4th and into the 5th. Low level temperatures across lower elevations were generally above freezing, with little to no snow accumulation. However, much colder air was in place aloft, so elevations above 3000 feet received 5-8 inches of snow. The highest amount was reported by the cooperative observer at Snowshoe where 8 inches of snow accumulated. A nearby CoCoRaHS volunteer measured 6.3 inches, and the Department of Highways reported amounts varying from 3 to 8 inches along US-219 across the ridges of Pocahontas and Randolph Counties.

(WV-Z006) CABELL, (WV-Z008) JACKSON, (WV-Z013) LINCOLN, (WV-Z014) PUTNAM, (WV-Z015) KANAWHA, (WV-Z016) ROANE, (WV-Z018) CALHOUN, (WV-Z020) DODDRIDGE, (WV-Z029) GILMER, (WV-Z030) LEWIS, (WV-Z031) HARRISON, (WV-Z032) TAYLOR

02/06/18 06:00 EST	0	Winter Weather
02/06/18 11:00 EST	0	

A warm front lifted through the middle Ohio River Valley on the 6th. Surface temperatures across portions of West Virginia remained at or below freezing through mid morning while temperatures above the surface had already warmed above freezing. This resulted in a period of light freezing drizzle, with a light coating of ice across a narrow swath of central and western West Virginia.

MINGO COUNTY --- 1.7 WSW BAISDEN [37.57, -81.93], 1.3 W VERNER [37.67, -81.87], 2.8 ESE VERNER [37.65, -81.81], 1.7 ENE ERAW [37.54, -81.89]

MINGO COUNTY --- 146.5 SW MURPHY [37.81, -82.35], 146.3 SW MURPHY [37.85, -82.37], 147.4 SW MURPHY [37.84, -82.39], 147.8 SW MURPHY [37.85, -82.41], 148.0 SW MURPHY [37.84, -82.41], 148.1 SW MURPHY [37.83, -82.40], 148.1 SW MURPHY [37.82, -82.39]

02/11/18 20:00 EST	2K	Flood (due to Heavy Rain)
02/12/18 11:00 EST	0	Source: River/Stream Gage

Flooding occurred along the Tug Fork near Kermit as the river rose just over 2 feet over flood stage of 38 feet. Flooding first started around 6 PM on the 11th, and the river crested at 40.2 feet just before 3 AM on the 12th. The flooding subsided around 11 AM that morning.

A frontal system was draped across the central Appalachians on the 10th and 11th. As waves moved along the front, periods of heavy rainfall moved across southern West Virginia. Rainfall started during the morning of the 10th, with the heaviest rain from late afternoon overnight into the 11th. The most rain fell across portions of Mingo, McDowell, Wyoming, Logan and Raleigh Counties, where 2-3 inches of rain fell with many roads closed due to flooding. The cooperative observer at Oceana in Wyoming County measured 2.56 inches of rain, and at R.D. Bailey Lake on the Wyoming/Mingo border, 2.37 inches was measured. The cooperative observer at Man in Logan County measured 2.2, while the VA Hospital in Beckley got 2.09 inches of rain. Farther north generally 1-2 inches of rain fell, which still caused some minor problems due to saturated ground.

As the water drained through the creeks and streams, several rivers also flooded.

HARRISON COUNTY --- 2.3 NNE MC ALPIN [39.38, -80.21], 0.8 SE ORAL LAKE [39.26, -80.21], 1.8 SSE REYNOLDSVILLE [39.25, -80.42], 0.5 SE WYATT [39.43, -80.34]

02/16/18 01:40 EST	2K	Flood (due to Heavy Rain)
02/17/18 07:00 EST	0	Source: Department of Highways

Several roads were closed across northwestern Harrison County due to flooding. This included Saint Francis Way near Maple Lake in Bridgeport and Bonasso Drive near the Harrison/Marion County line.

The West Fork River in Clarksburg also flooded, closing West Pike Street. The river gage at Clarksburg rose above flood stage on the evening of the 16th. It crested at 15 feet, or 1 foot above flood stage just after midnight on the 17th and returned to its banks later that morning.

The river gage at Enterprise on the West Fork also rose above its bank full level of 17 feet around noon on the 16th, crested at 20.5 feet just before midnight that night, and returned below bank full by noon on the 17th.

The Ohio River gage at Racine Lock rose above its flood stage of 41 feet early on the 17th. The river surpassed moderate flooding, and almost reached its major flood stage of 48 feet, during its crest of 47.7 feet just after midnight on the 19th. The river dropped back below flood stage around noon on the 20th. This flooded a section of Route 62 near West Creek.				
At the Pomeroy, Ohio staff gage, the Ohio River rose above its flood stage of 46 feet late around noon on the 17th. Major flooding occurred along this stretch of the river, where the staff gage read almost 50.5 feet during crest late on the 18th, topping major flood stage by half a foot. Water levels dropped back below flood stage around sunrise on the 20th. This caused flooding of some homes near the Pomeroy-Mason bridge.				
Near Point Pleasant, the Ohio River almost reached major flooding, topping out at 47.5 feet just after midnight on the 19th. Major flood stage is 48 feet. Flooding began around 3 AM on the 17th, and the river dropped below flood stage mid morning on the 21st. Sections of many roads around Point Pleasant were flooding, including Routes 2, 17, 21, 33, and 35.				
Near the Robert C. Byrd lock, the Ohio River rose above flood stage of 50 feet a couple hours before sunrise on the 18th. Crest occurred just above moderate flood stage of 52 feet during the pre-dawn hours of the 19th. The river dropped back below flood stage at about 6 o'clock that evening. This flooded a section of Route 2 near Apple Grove, and also several agricultural fields along the river.

The Ohio River gage at Racine Lock rose above its flood stage of 41 feet early on the 17th. The river surpassed moderate flooding, and almost reached its major flood stage of 48 feet, during its crest of 47.7 feet just after midnight on the 19th. The river dropped back below flood stage around noon on the 20th. This caused flooding of low lying areas around Ravenswood.

CABELL COUNTY --- 1.6 S WEST HUNTINGTON [38.40, -82.47], 1.5 NNE GUYAN ESTATES [38.44, -82.29], 0.9 NE GWINN [38.58, -82.21], 0.5 ENE CROWN CITY [38.58, -82.27], 0.2 S HUNTINGTON NEWLON AR [38.45, -82.32], 0.2 SSW WEST HUNTINGTON [38.42, -82.47]				
	02/18/18 03:11 EST		0	Flood (due to Heavy Rain)
	02/20/18 18:33 EST		0	Source: River/Stream Gage

The Ohio River around Huntington rose above its flood stage of 50 feet just after midnight on the 18th, cresting just over 53 feet late morning on the 19th. The river dropped back below flood stage during the evening of the 20th. This caused flooding of Route 60 in several spots and of Route 2 between Lesage and Glenwood.

A wave of low pressure and surface front crossed West Virginia, producing heavy rainfall on the 16th. Generally 1 to 2 inches of rain fell on already saturated soil. This resulted in creek and stream flooding on the 16th and into the 17th. As the rain drained through the river system, smaller main stem rivers flooded. This eventually led to flooding along the the Ohio River.

(WV-Z009) WOOD, (WV-Z010) PLEASANTS, (WV-Z011) TYLER, (WV-Z019) RITCHIE, (WV-Z523) NORTHWEST POCAHONTAS				
	02/17/18 12:00 EST		0	Winter Weather
	02/18/18 03:30 EST		0	

A low pressure system moved through the central Appalachians on the 17th, driving a lot of low level moisture into West Virginia. While this system also pulled warmer air northward resulting in heavy rain across the southern part of the state, it remained cold enough across northern West Virginia for a period of snow before transitioning to brief sleet or freezing rain, and then all rain. There was a narrow band that experienced a brief period of very heavy snow, with reports of 1 to 2 inches accumulating in an hour. This band was across portions of Wood, Pleasants, Ritchie and Tyler Counties. Even across individual counties, snowfall accumulations varied drastically based on the location of the heaviest band. For example, in Wood County, a member social media postings indicated 3 to 4 inches of snow across the southern part of the county, while near Parkersburg the US Army Corps of Engineers measured 1.5 inches. In Ritchie County, the emergency manager measured 3 inches before the snow changed to rain. Pleasants and Tyler Counties saw 2 to 3 inches of snow measured by CoCoRaHS volunteers and social media users.

Colder air lingered a bit longer across the higher mountains, namely in Pocahontas County where 3 to 6 inches of snow fell. For example, the cooperative observer at Snowshoe measured 6 inches, 5 inches of snow fell in near Bartow, and the observer in Frost received 4 inches.

CABELL COUNTY --- 1.1 ENE HUNTINGTON [38.43, -82.43], 0.2 WNW HUNTINGTON [38.42, -82.45], 0.9 S HUNTINGTON [38.41, -82.45], 1.7 ESE HUNTINGTON [38.41, -82.42]				
	02/24/18 13:00 EST		0	Flood (due to Heavy Rain)
	02/24/18 16:00 EST		0	Source: Social Media

Minor street flooding occurred on several roads in Huntington.

MASON COUNTY --- 2.6 NNW POINT PLEASANT [38.88, -82.14], 1.5 NNW POINT PLEASANT [38.87, -82.14], 1.0 W HENDERSON [38.83, -82.15], 0.4 SSE HENDERSON [38.83, -82.13], 0.7 ENE POINT PLEASANT [38.85, -82.11], 2.1 SSW POINT PLEASANT ARPT [38.89, -82.11]				
	02/25/18 10:05 EST		0	Flood (due to Heavy Rain)
	02/27/18 13:42 EST		0	Source: River/Stream Gage

Minor flooding occurred in low lying areas around Point Pleasant, and amphitheater at the lower pier had water halfway up its steps due to flooding along the Ohio River.

The river gage at Point Pleasant rose above its 40 foot flood stage around 10 AM on the 25th. The river crested at 40.3 feet around 3 PM on the 26th, and fell below flood stage early afternoon on the 27th.

An oscillating surface boundary with multiple waves of low pressure brought periods of moderate to heavy rainfall from the 22nd into the 25th. This caused another round of flooding on small creeks and streams across the middle Ohio River Valley, and eventually lead to minor flooding on the Ohio River.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

WISCONSIN, Northeast

(WI-Z005) VILAS

	02/24/18 19:30 CST	0		Heavy Snow
	02/25/18 03:00 CST	0		

A low pressure system that intensified over the southern Plains and tracked through Wisconsin, combined with a potent, quick-moving upper level disturbance to produce a swath of snow and some minor sleet and freezing rain over much of central, north central and northeast Wisconsin. The heaviest snow occurred over far north central Wisconsin, where up to 6 inches was reported.

WISCONSIN, Northwest

(WI-Z001) DOUGLAS, (WI-Z002) BAYFIELD, (WI-Z003) ASHLAND

	02/19/18 08:00 CST	0		Heavy Snow
	02/20/18 09:00 CST	0		

A narrow area of heavy snow occurred across portions of northwest Wisconsin with snowfall rates of one inch an hour at times. The heavy area was across northern Douglas County, northern Bayfield County and far northern Ashland County. Snowfall rates of an inch an hour occurred. Snowfall in these areas ranged from 8 to 12 inches.

(WI-Z001) DOUGLAS, (WI-Z002) BAYFIELD, (WI-Z003) ASHLAND

	02/19/18 08:00 CST	0		Heavy Snow
	02/20/18 09:00 CST	0		

Heavy snow extended east across northern Douglas, Bayfield, and Ashland Counties. There were periods of freezing rain at times. Snowfall ranged from 8 to 11 inches.

(WI-Z001) DOUGLAS, (WI-Z002) BAYFIELD, (WI-Z003) ASHLAND, (WI-Z004) IRON, (WI-Z006) BURNETT, (WI-Z007) WASHBURN, (WI-Z008) SAWYER, (WI-Z009) PRICE

	02/22/18 20:00 CST	0		Heavy Snow
	02/23/18 07:30 CST	0		

Six to 8.5 inches of snow fell from late afternoon to sunrise.

(WI-Z001) DOUGLAS, (WI-Z002) BAYFIELD, (WI-Z003) ASHLAND, (WI-Z004) IRON, (WI-Z006) BURNETT, (WI-Z007) WASHBURN, (WI-Z008) SAWYER, (WI-Z009) PRICE

	02/24/18 18:00 CST	0		Heavy Snow
	02/25/18 09:00 CST	0		

Heavy snow began across the northwest during the late afternoon and early evening. By midnight some areas had already received close to 6 inches of snow, and more fell overnight. Snowfall amounts were in the 4 to 8 inch range. Some areas received less than 6 inches of snow but the snowfall intensity and strong winds made travel conditions difficult.

WISCONSIN, Southeast

The Sugar River reached moderate flood stage, cresting at 13.88 feet in Albany. Floodwaters cover a low spot on Highway EE near Albany Wildlife Area about 2 miles north of Albany. Floodwaters get into the basements of some homes along South Water Street and in the basements of a few businesses on North Water Street in downtown Albany. Floodwaters affect the back yards of a few homes along South Mill Street. Floodwaters are into Village Park.

Periods of moderate rainfall on February 19-20th resulted in 1.25-2.50 inches of rain. The rain fell on top of a snow cover of 0 to 3 inches and a frozen ground. Significant runoff resulted in widespread areal flooding and river flooding over southeast WI and portions of south central WI. Several rivers reached moderate and major flood stage.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

One person was killed in a two vehicle accident near Westby (Vernon County) on February 3rd. Roads at the time were snow covered from light snow that had been falling for most of the afternoon. The driver of one of the vehicles lost control in the slippery conditions, crossed the center line and collided head on with the second vehicle.

(WI-Z054) CRAWFORD, (WI-Z061) GRANT

02/08/18 15:10 CST	0	Winter Storm
02/09/18 08:30 CST	0	

Heavy snow fell on parts of southwest Wisconsin from February 8th into the 9th as a storm system moved across the Midwest. The snow created hazardous driving conditions that prompted several schools to either close or have late starts on the 9th. Snowfall totals were generally in the 4 to 6 inch range with the highest reported total being 6 inches at several locations in both Crawford and Grant Counties.

02/21/18 00:40 CST	0	Source: River/Stream Gage

Runoff from heavy rains pushed the Grant River out of its banks near Burton. The river crested over two and a half feet above the flood stage at 20.65 feet.

GRANT COUNTY --- 2.2 NE ROCKVILLE [42.74, -90.64], 2.5 E ROCKVILLE [42.73, -90.63], 2.5 E ROCKVILLE [42.71, -90.63], 2.4 E ROCKVILLE [42.71, -90.63], 2.3 E ROCKVILLE [42.72, -90.63], 2.1 NE ROCKVILLE [42.74, -90.65]

02/20/18 08:10 CST	0	Flood (due to Heavy Rain)
02/20/18 20:40 CST	0	Source: River/Stream Gage

Runoff from heavy rains pushed the Platte River out of its banks near Rockville. The river crested almost two feet above the flood stage at 10.79 feet.

A prolonged period of freezing drizzle and freezing rain on February 19th and 20th produced a coating of ice on untreated surfaces across western Wisconsin. The precipitation fell with temperatures below freezing as a slow moving area of low pressure moved from the Missouri River Valley toward the Great Lakes. Ice accumulations up to a quarter of an inch were reported by a COOP observer in Osseo (Trempealeau County) and most schools were either closed or delayed on the 20th. In addition, with the rain falling on frozen ground, the runoff caused some flooding along the Grant and Platte Rivers in Grant County.

WISCONSIN, West

(WI-Z014) POLK, (WI-Z015) BARRON, (WI-Z016) RUSK

02/24/18 16:00 CST	0	Winter Storm
02/25/18 01:00 CST	0	

The morning of Saturday, February 24th, a storm system moved out of the Plains, and into the Upper Midwest. Several waves of snow moved across Minnesota, and into western Wisconsin Saturday afternoon. The snow tapered off in west central Wisconsin shortly after midnight, Sunday, February 25th.

Some of the higher snowfall totals in west central Wisconsin included:

- 7.0 Inches north of Bruce in Rusk County.
- 6.5 Inches near Osceola in Polk County.
- 6.0 Inches near Haugen in Barron County.

A pair of cold fronts moved across Wyoming and brought areas of heavy snow across northern and western portions of the state. The Big Horn Mountains saw heavy snow with some notable amounts including 20 inches at the Powder River SNOTEL and 16 inches at Shell Creek. Some of the other high amounts in the mountains included 19 inches at Evening Star in the Absarokas, 16 inches at Blind Bull Summit in the Salt and Wyoming Range and 13 inches at Togwotee Pass in the Tetons. In the Big Horn Basin, 10 inches of snow fell at Ten Sleep and anywhere from 6 to 9 inches in the Greybull area. In addition, an intense snow squall developed in western Fremont County and moved at speeds of up to 70 mph across the Wind River Basin. Wind gusts of up to 77 mph were reported, and the intense winds destroyed a trailer on the Wind River Indian Reservation.

(WY-Z002) ABSAROKA MOUNTAINS, (WY-Z003) CODY FOOTHILLS

02/08/18 03:40 MST	0	High Wind (MAX 70 kt)
02/08/18 14:00 MST	0	

An approaching cold front mixed down strong wind level winds and brought high winds to areas in the Lee of the Absarokas. The highest wind gust reported was 81 mph along the Chief Joseph Highway. In the wind prone areas near Clark, a gust to 77 mph was recorded.

(WY-Z003) CODY FOOTHILLS, (WY-Z019) GREEN MOUNTAINS & RATTLESNAKE RANGE, (WY-Z020) NATRONA COUNTY LOWER ELEVATIONS

02/13/18 18:15 MST	0	High Wind (MAX 81 kt)
02/14/18 15:10 MST	0	

A combination of a strong pressure gradient and strong low level winds mixing to the surface brought high winds to wind prone areas of northern and central Wyoming. The strongest winds occurred in the vicinity of Clark where gusts as high as 93 mph were recorded. In central Wyoming, some of the highest wind gusts included 83 mph at the Fales Rock RAWS site in the Green Mountains and 68 mph along Wyoming Boulevard south of Casper.

(WY-Z018) LANDER FOOTHILLS, (WY-Z019) GREEN MOUNTAINS & RATTLESNAKE RANGE, (WY-Z020) NATRONA COUNTY LOWER ELEVATIONS

02/17/18 11:00 MST	0	High Wind (MAX 68 kt)
02/18/18 02:00 MST	0	

A complex and potent winter storm crossed western and central Wyoming and brought heavy snow and high wind to many locations. Strong winds occurred ahead of the storm in portions of central Wyoming, with some of the strongest gusts were 78 mph at Fales Rock and 75 mph along Wyoming Boulevard on the south side of Casper. Following that, heavy snow fell. Over a foot of new snow fell in portions of the Tetons, Absarokas and Casper Mountain as well as in Yellowstone Park. In the lower elevations, the heaviest snow fell around Casper where up to 15 inches was measured. Other areas with over 6 inches included around Rock Springs, northern Big Horn County and around Bondurant.

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Direct Fatalities: M30OU

A 30 year old Utah man was skiing at Rock Springs Canton, a back country ski area south of Jackson Hole Ski Resort. He was skiing in an area called Ralph's Slide when a triggered an avalanche. The man was partially buried and was pronounced dead at the scene from head trauma.

(WY-Z003) CODY FOOTHILLS, (WY-Z019) GREEN MOUNTAINS & RATTLESNAKE RANGE, (WY-Z020) NATRONA COUNTY LOWER ELEVATIONS

02/25/18 08:15 MST	0	High Wind (MAX 83 kt)
02/26/18 10:30 MST	0	

Strong mid level winds mixed to the surface ahead of an advancing cold front and brought high winds to the wind prone areas across central Wyoming. The strongest winds were near Clark where winds gusted as high as 96 mph. Elsewhere, winds gusted to 81 mph along Wyoming Boulevard south of Casper and a gust of 79 mph was recorded at Fales Rock in the Green Mountains.

WYOMING, Extreme Southwest

(WY-Z021) UINTA

02/18/18 10:00 MST	0	Heavy Snow
02/20/18 15:00 MST	0	

The same winter storm that impacted much of Utah, starting February 18, also brought heavy snowfall to far southwest Wyoming.

WYOMING, North Central

(WY-Z098) NORTHEAST BIGHORN MOUNTAINS, (WY-Z099) SHERIDAN FOOTHILLS

02/03/18 10:00 MST	0	Winter Storm
02/05/18 06:00 MST	0	

Arctic air at the surface, combined with a moist flow off the Pacific, resulted in an "over-running event" which brought heavy snow across the entire Billings Forecast area.

(WY-Z099) SHERIDAN FOOTHILLS

02/18/18 08:14 MST	0	Winter Storm
02/19/18 03:00 MST	0	

Arctic air at the surface, combined with a moist flow off the Pacific, resulted in heavy snow across the Sheridan Foothills.

WYOMING, Northeast

(WY-Z057) WYOMING BLACK HILLS

02/03/18 12:00 MST	0	Heavy Snow
02/04/18 03:00 MST	0	

A storm system brought areas of heavy snow to the Bear Lodge Mountains. Snowfall amounts of four to eight inches were reported. Breezy northwest winds produced patchy blowing snow.

(WY-Z058) WESTON

02/08/18 18:00 MST	0	Winter Storm
02/09/18 11:00 MST	0	

A winter storm brought snowfall to much of northeastern Wyoming. A band of heavy snow developed over northern and eastern Weston County, producing five to ten inches of snow from Upton to the Newcastle area.

(WY-Z054) NORTHERN CAMPBELL, (WY-Z055) SOUTH CAMPBELL, (WY-Z056) WESTERN CROOK, (WY-Z057) WYOMING BLACK HILLS, (WY-Z058)

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
WESTON, (WY-Z071) NORTHEASTERN CROOK				
	02/18/18 08:00 MST		0	Winter Storm
	02/19/18 19:00 MST		0	

A strong winter storm brought heavy snow to much of northeastern Wyoming. Snowfall amounts of six to 12 inches were common across the area. Breezy conditions also brought patchy blowing snow and greatly reduced visibility at times.

WYOMING, Southeast

(WY-Z104) FERRIS/SEMINOE/SHIRLEY MOUNTAINS, (WY-Z105) SHIRLEY BASIN, (WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z107) EAST PLATTE COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z115) LARAMIE VALLEY, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS, (WY-Z118) CENTRAL LARAMIE COUNTY				
	02/02/18 10:45 MST		0	High Wind (MAX 69 kt)
	02/05/18 04:25 MST		0	

Periodic strong winds affected much of southeast and south central Wyoming. Peak gusts of 60 to 80 mph were observed.

(WY-Z112) SIERRA MADRE RANGE, (WY-Z114) SNOWY RANGE				
	02/02/18 17:00 MST		0	Winter Storm
	02/05/18 17:00 MST		0	

A prolonged period of moderate to heavy snow fell over the Snowy and Sierra Madre mountains. One to three feet of snow was observed.

(WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z107) EAST PLATTE COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z115) LARAMIE VALLEY, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS				
	02/07/18 07:00 MST		0	High Wind (MAX 59 kt)
	02/08/18 19:15 MST		0	

A tight pressure gradient and strong winds aloft produced high winds for the wind-prone areas of southeast Wyoming. Gusts of 60 to 70 mph were observed.

(WY-Z112) SIERRA MADRE RANGE				
	02/12/18 12:00 MST		0	Winter Weather
	02/12/18 23:00 MST		0	

Moist upslope flow and a weak upper level disturbance produced moderate snowfall over the Sierra Madre Range. Snowfall ranged from 4 to 8 inches.

(WY-Z101) CONVERSE COUNTY LOWER ELEVATIONS, (WY-Z104) FERRIS/SEMINOE/SHIRLEY MOUNTAINS, (WY-Z105) SHIRLEY BASIN, (WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z107) EAST PLATTE COUNTY, (WY-Z109) CENTRAL CARBON COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z115) LARAMIE VALLEY, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS, (WY-Z118) CENTRAL LARAMIE COUNTY				
	02/14/18 01:25 MST		0	High Wind (MAX 72 kt)
	02/14/18 16:30 MST		0	

High winds developed across portions of south central and southeast Wyoming. Frequent gusts of 60 to 80 mph were observed.

(WY-Z112) SIERRA MADRE RANGE, (WY-Z114) SNOWY RANGE				
	02/14/18 12:00 MST		0	Winter Storm
	02/15/18 14:00 MST		0	

An energetic, moist upslope flow produced periods of heavy snowfall over the Snowy and Sierra Madre mountains. Storm totals ranged from 10 to 14 inches.

(WY-Z110) NORTH SNOWY RANGE FOOTHILLS				
	02/16/18 18:00 MST		0	Blizzard
	02/17/18 03:00 MST		0	

Storm Data and Unusual Weather Phenomena - February 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
(WY-Z101) CONVERSE COUNTY LOWER ELEVATIONS, (WY-Z103) NORTH LARAMIE RANGE, (WY-Z104) FERRIS/SEMINOE/SHIRLEY MOUNTAINS, (WY-Z105) SHIRLEY BASIN, (WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z107) EAST PLATTE COUNTY, (WY-Z109) CENTRAL CARBON COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z113) UPPER NORTH PLATTE RIVER BASIN, (WY-Z115) LARAMIE VALLEY, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS, (WY-Z118) CENTRAL LARAMIE COUNTY				
	02/16/18 18:55 MST		0	High Wind (MAX 68 kt)
	02/18/18 09:00 MST		0	

Prolonged and widespread high winds developed over much of southeast Wyoming. Frequent gusts of 60 to 70 mph were observed. The combination of high winds and blowing snow created ground blizzard conditions along Interstate 80 between mile markers 249 and 284 including Arlington and Elk Mountain.

(WY-Z101) CONVERSE COUNTY LOWER ELEVATIONS, (WY-Z102) NIOBRARA COUNTY, (WY-Z103) NORTH LARAMIE RANGE, (WY-Z104) FERRIS/SEMINOE/SHIRLEY MOUNTAINS, (WY-Z105) SHIRLEY BASIN, (WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z107) EAST PLATTE COUNTY, (WY-Z108) GOSHEN COUNTY, (WY-Z109) CENTRAL CARBON COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z111) SOUTHWEST CARBON COUNTY, (WY-Z112) SIERRA MADRE RANGE, (WY-Z113) UPPER NORTH PLATTE RIVER BASIN, (WY-Z114) SNOWY RANGE, (WY-Z115) LARAMIE VALLEY, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS				
	02/17/18 18:00 MST		0	Winter Storm
	02/20/18 02:00 MST		0	

A strong, slow-moving low pressure system moved across southeast Wyoming and produced widespread moderate to heavy snowfall. Wind gusts to 30 mph created areas of drifting snow and poor visibility. Storm total snowfall ranged from 6 to 18 inches, heaviest over the Snowy Range.

(WY-Z103) NORTH LARAMIE RANGE, (WY-Z106) CENTRAL LARAMIE RANGE AND SOUTHWEST PLATTE COUNTY, (WY-Z110) NORTH SNOWY RANGE FOOTHILLS, (WY-Z116) SOUTH LARAMIE RANGE, (WY-Z117) SOUTH LARAMIE RANGE FOOTHILLS, (WY-Z118) CENTRAL LARAMIE COUNTY				
	02/24/18 06:45 MST		0	High Wind (MAX 66 kt)
	02/25/18 18:00 MST		0	

Periods of high winds developed across the wind prone areas of southeast Wyoming. Wind gusts of 60 to 75 mph were observed.
