

WAUSAU WEATHER RECORDS (BOOK 2 OF 2)

Updated: 10/04/24

Page #	Temperature Data
183-193	Monthly Temperatures (Max / Min / Mean)
194-195	Winter Temperatures (Max / Min / Mean)
196-197	Spring Temperatures (Max / Min / Mean)
198-199	Summer Temperatures (Max / Min / Mean)
200-201	Fall Temperatures (Max / Min / Mean)
202-203	Yearly Temperatures (Max / Min / Mean)
204-212	Monthly / Yearly Temperature Extremes

Page #	Heating and Cooling Degree Days
213-217	Monthly / Seasonal Heating Degree Days
218-221	Heating Degree Days by Season
222-225	Monthly / Yearly Cooling Degree Days
226-229	Cooling Degree Days by Season

Page #	Precipitation Data
230-233	Monthly / Yearly Precipitation Totals
234-237	Seasonal Precipitation Totals
238-241	Greatest 24 Hour Precipitation by Month / Year

Page #	Snowfall Data
242	Top 25 Seasonal Snowfall Totals (September to May)
243-246	Snowfall Totals by Season (September to May)
247-250	Snowfall Totals by Calendar Year
251-254	Snowfall Totals by Season (Fall / Winter / Spring)
255-259	Greatest Calendar Day Snowfall Totals By Month / Year
260-265	Greatest Snowstorms in History (1-2 Day Totals)
266-271	Greatest Snow Depth on Record by Month / Year
272-274	Consecutive Days with Snow on the Ground (1, 6, 12 & 24 inches)
275-278	Number of Days with Snow Cover (1, 6, 12, 18 & 24 inches)
279-280	Most / Least Day with Snow Cover (1, 6, 12, 18 & 24 inches)
281-284	Date of First and Last 0.1/1.0 inches Of Snow
285-287	Earliest / Latest Measureable Snowfall - (Trace / 0.1 / 1.0 inches)

WAUSAU WEATHER RECORDS (BOOK 2 OF 2)

PAGE # WIND DATA

288-293 Peak Wind Gust Data by Month
294-296 Average Wind Speed Data (Month / Year)
297-309 Wausau Wind Roses (Month / Year)

PAGE # PRESSURE DATA

310-322 Maximum / Minimum Monthly & Yearly Pressure Records
323-329 Maximum / Minimum Pressure By Month / Year

PAGE # DROUGHTS ACROSS NC/NE WISCONSIN SINCE 1900

330-339 Droughts since 1900

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

Here is a look at some of the more significant droughts across north central and from normal during these periods. In some cases, there was sporadic locally heavy rain northeast Wisconsin since 1900. Some caution should be used when looking at precipitation departures amounts during a particular month that was localized. A good example would be summer time thunderstorms that can bring locally heavy rains. These isolated locally heavy rain events can obscure the magnitude of the drought at that location compared to surrounding sites. The departures from normal were calculated using the 1971-2000 normals since many sites have different starting dates and may not have had a long period of record at the time of the drought. Also, as you go further back in time, there were fewer locations that had a complete precipitation data set during the period. Only sites that had a complete data set were used in this study.

For your information, Rice Reservoir is near Tomahawk and Lac Vieux Desert is in Vilas County. Locations were ranked by the total precipitation deficit.

DROUGHT 1907-1910

Four years of below normal precipitation were noted during this period, with many consecutive months of below normal precipitation. The fall of 1908 was very dry, especially October 1908 when monthly precipitation totals were generally under an inch and a half. Green Bay reported only a tenth of an inch of rain during the month. The precipitation deficits were the greatest across north-central into northeast Wisconsin.

The first signs of the drought breaking occurred during August and September 1910 with above normal precipitation across much of the area. Much of the impacts of the drought were mitigated in 1911 with precipitation totals for the year running 5 to 10 inches above normal. Some yearly precipitation totals for 1911 include: 42.94 inches at Wisconsin Rapids, 40.79 inches at Rhinelander, 40.62 inches at Waupaca, 40.36 inches at Merrill, 37.01 inches at Manitowoc, 36.65 inches at Appleton and 34.67 inches at Oshkosh. Normal precipitation is around 30 inches across the region.

LOCATION	1907-1910 PCPN TOTAL	NORMAL (INCHES)	DEFICIT (INCHES)	PERCENT OF NORMAL
Wisc. Rapids	97.53	129.68	-32.15	75

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1917

The fall of 1916 (September through November) was extremely wet. The weather pattern abruptly shifted with below normal precipitation during December 1916. There were three periods of well below normal monthly precipitation totals, January and February followed by the second period of dry weather in July and August. The drought peaked during November and December 1917 with precipitation running several inches below normal. The weather pattern then shifted abruptly to a very wet pattern during January and February of 1918. Precipitation amounts in these two months alone were 1 to 3 inches above normal at most places. The year 1918 ended up ranging from near normal in a few places to as much as 5 to 6 inches above normal across northeast Wisconsin. Above normal precipitation was reported for a second year in a row during 1919.

LOCATION	1917 PCPN TOTAL	NORMAL (INCHES)	DEFICIT (INCHES)	PERCENT OF NORMAL

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1920-1925

First signs of drought conditions began in December 1919 with much below normal precipitation. Many locations reported under an inch of precipitation during the month. The drought of 1920 to 1925 can be characterized by persistent below normal monthly precipitation totals. Early in the drought period, there were periodic heavy rains due to thunderstorm activity at Sturgeon Bay that brought well above normal precipitation to a small area across Door County. 1926 brought drought relief to many areas of north-central and northeast Wisconsin. Some yearly precipitation totals for 1926 include: 37.24 inches at New London, 37.02 inches at Wausau, 36.84 inches at Oshkosh, 36.59 inches at Marinette, 36.47 inches at Merrill, 36.54 inches at Stevens Point, 35.90 inches at Antigo and 35.08 inches at Oconto.

There were some portions of northeast Wisconsin that never really recovered from the 1920 to 1925 drought that included areas from Green Bay, Kewaunee, Manitowoc and Sturgeon Bay. Although precipitation totals were slightly above normal in 1926, precipitation deficits of a few inches were reported each year from 1927 through 1929. A case could be made that the drought conditions persisted in this portion of the state from 1920 to 1937.

LOCATION	1920-1925 PCPN TOTAL	NORMAL (INCHES)	DEFICIT (INCHES)	PERCENT OF NORMAL
Wausau	165.57	200.16	-34.59	83

New London	206.86	184.92	+21.94	112

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1930-1937

Some portions of northeast Wisconsin did not fully recover from the drought of 1920 to 1925 as precipitation totals were near normal or a few inches below during the late 1920s from Green Bay to Kewaunee to Manitowoc and sturgeon bay.

The 1930s are known as the dust bowl years across the plains. The droughts of the 1930s were characterized by very hot summers with intense heat waves which did not spare Wisconsin. Somewhere across north central and northeast Wisconsin, 100 degree temperatures were reported each year. The drought peaked in 1936 with the warmest July and month on record for many locations in the region. July 1936 also went down in the record books as the most days in the 100s in a given month and also recorded the most consecutive days with highs above 100. The intense heat wave peaked between July 7th and July 14th.

1936 went down in the record books as the third driest year on record at Green Bay. Seven years of precipitation deficits of 3 to 10 inches took its toll. The hardest hit area with respect to precipitation deficits was from Marinette and Oconto into Green Bay and the Fox Cities west to Antigo and Merrill. 1938 brought much above normal precipitation totals to locations north and west of Green Bay and the Fox Cities. Some totals include: 52.13 inches at Stevens Point, 52.05 inches at Rest Lake, 48.72 inches at Wausau, 46.81 inches at Wisconsin Rapids, 45.73 inches at Long Lake Dam, 43.83 inches at Oshkosh, 42.01 inches at Hancock, 41.51 inches at Rhinelander, 40.08 inches at Shawano and 38.25 inches at Crivitz High Falls.

Although precipitation was only a few inches above normal, areas from Green Bay, Kewaunee, Manitowoc and Sturgeon Bay continued to experience near or below normal precipitation from 1939 to 1942. It appears this portion of the state went through a period of 25 to 30 years of near or below normal precipitating if you include the drought conditions from 1943 to 1948.

LOCATION	1930-1937 PCPN TOTAL	NORMAL (INCHES)	DEFICIT (INCHES)	PERCENT OF NORMAL

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1943-1948

The first signs of drought conditions were noted in November and December of 1942. Persistent below normal precipitation was noted between 1943 and 1948 with the greatest deficits across north central and portions of northeast Wisconsin.

This drought period had one interesting trend that the other droughts did not have. From 1943 to 1948, there were localized heavy rains events in different sections of north central and northeast Wisconsin from month to month during the summer months and each year during the drought period. After closer analysis, these heavy rains were very localized and shifted from month to month and location to location each year, therefore one particular location did not see a prolonged period of wet weather during this period of drought. Drought conditions slowly improved as precipitation totals were at or slightly above normal from 1949 to 1951 at most locations.

LOCATION	1943-1948 PCPN TOTAL	NORMAL (INCHES)	DEFICIT (INCHES)	PERCENT OF NORMAL
Waupaca	172.67	201.66	-28.99	86

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1952-1958

During the drought of 1952 to 1958, there was persistent below normal precipitation each year. The winters during this period were especially dry with well below normal snowfall at most locations in most years. The rate of recovery from this drought varied as precipitation varied greatly from near normal to as much as 10 inches above normal from 1959 to 1961.

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1962-1964

Below normal precipitation was observed during January of 1962. Persistent below normal monthly precipitation totals were observed during the remainder of the period. The peak of the drought occurred in 1963 when yearly precipitation totals ranged from 7 to 12 inches below normal. Precipitation then returned closer to normal during 1964. The drought was alleviated fairly quickly across portions of central and northeast Wisconsin during 1965. Very heavy rainfall totals were reported during September with amounts in the 8 to 12 inch range. The very heavy rains missed far northern Wisconsin. Drought conditions were slower to improve in this portion of the state. Precipitation was at or above normal from 1966 to 1972 to help alleviate the drought in that portion of the state.

Looking at the later 1960s, there was a small area of dry conditions from 1966 to 1971 in the Green Bay, Two Rivers and Manitowoc areas.

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1974-1976

Precipitation during 1974 averaged a few inches below normal while 1975 precipitation totals were at or slightly above normal across the region. The most severe portion of the drought occurred in 1976 from August to December. November of 1976 was extremely dry with most locations reporting under a quarter of inch of precipitation during the month. There were even a few locations that only reported a trace of precipitation during the month. Many locations reported their driest November on record. 1976 ended up as the driest year on record with 20.33 inches at Appleton and 21.43 inches at Wausau and 21.61 inches at Stevens Point. Green bay ended the year as the second driest year on record with 17.85 inches. The drought was alleviated by above normal precipitation during the late 1970s and early 1980s.

DROUGHTS SINCE 1900 ACROSS NC/NE WISCONSIN

DROUGHT 1987-1989

Below normal precipitation was first observed in January 1987. Persistent below normal monthly precipitation totals were observed throughout the period. At most locations, the year 1989 recorded the greatest departure from the yearly precipitation normals.

The dissipation of the drought varied greatly across the region. Across central into northeast Wisconsin including Stevens Point to Waupaca to Marinette and locations to the south and east the drought was slower to dissipate as precipitation was at or slightly above normal during the early 1990s. The drought was quicker to dissipate across portions of north-central Wisconsin where precipitation amounts were well above normal in many locations during 1990 and 1991. Rhinelander recorded back to back years of 40 inches of precipitation, while Wausau was just shy of 40 inches both years.
