

The National Weather Service Online

Brought to you by the National Weather Service

www.weather.gov/wichita

All of your favorite weather information online!

All of your favorite National Weather Service products can be found on our webpage including the latest current conditions, forecasts, satellite imagery, radar loops, and all hazardous weather information are just a click away. In addition to the current and forecasted products, there is also a wealth of information available above the map in tabs that you hover over (see image below). This information includes river forecasts, climate data (historical data as well) and weather safety information. Also see the current and archived weather stories detailing a past event on our webpage (News Headlines).

All NWS office pages in Kansas have a similar homepage as the one below; the NWS Wichita homepage (below, www.weather.gov/wichita) features a map of the forecast area. If any hazardous weather is forecasted and advisories, watches, or warnings are issued, a color code will be used to specify which counties are being effected.

When you move your mouse over the map and click on the desired location; you will receive a 7-day forecast (right) as well as the current conditions at the nearest reporting site. If there is any hazardous weather, short term forecasts or severe watches and/or warnings, the text product will be highlighted in red between the News Headlines and the Current Conditions at the top. Check out the additional forecast information available at the bottom of the page.
