

***National Weather Service
Winter Weather
Spotter and Safety Training***

***Sam Lashley
Warning Coordination Meteorologist
NWS Indianapolis, IN***

Purpose of This Training

- Educate you on winter weather hazards and how to stay safe when winter weather occurs
- Teach you about different precipitation types and how they develop and might change during a winter storm
- Show you simple techniques for measuring and reporting winter precipitation to the NWS
- Share internet resources and ways to get more information about winter weather hazards

National Weather Service

MISSION

Provide weather, water, and climate data, forecasts, warnings and impact-based decision support services for the protection of life and property and enhancement of the national economy

VISION

A Weather-Ready Nation:
Society is prepared for and responds to weather, water, and climate-dependent events

NWS Indiana Offices and Contacts

Six NWS Offices Covering Indiana

- Indianapolis (IND)
 - State Liaison Office
 - 39 central counties
- Chicago (LOT)
 - 5 NW counties
- Northern Indiana (IWX)
 - 24 NC and NE counties
- Wilmington OH (ILN)
 - 8 SE counties
- Louisville, KY (LMK)
 - 10 southern counties
- Paducah, KY (PAH)
 - 6 SW counties

NWS Partnerships...CoCoRaHS

We can't do it alone! Consider Becoming a Volunteer

Help observe precipitation in your community !!

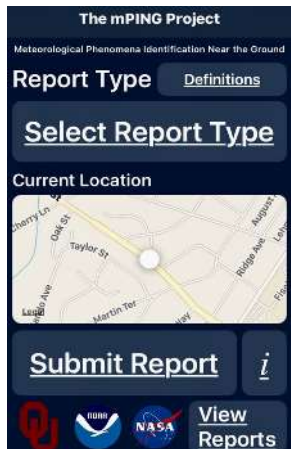

www.cocorahs.org

- International network of over 24,000 volunteers like you measuring and reporting precipitation each day
- Uniform tools, educational resources
- Data used by NWS to view precipitation reports and aids in warning decisions
- Data used for federal declarations
- More information at:
<https://cocorahs.org>

NWS Partnerships...mPING

We can't do it alone! Consider Becoming a Volunteer

- mPING is a free smartphone app to quickly report precipitation type, severe weather, flooding, and reduced visibility
- Also available through Radarscope App
- Used by NWS to see precipitation type reports in the winter
- More information at:

<https://mping.nssl.noaa.gov>

NWS Partnerships

We can't do it alone! Consider Becoming a Volunteer

- Dedicated volunteers like you!
- When most people think of Skywarn, they think of severe thunderstorms
- Skywarn spotters also make valuable contributions in the winter by reporting precipitation types, amounts and impacts

<https://www.weather.gov/SKYWARN>

SKYWARN
WEATHER.GOV®

NWS Partnerships

We can't do it alone! Weather Data You Can Use

- Midwest Regional Climate Center (MRCC) and the Indiana State Climate Office
- Providing climate data and services to Indiana and the midwest
- Many useful tools for weather data analysis
- More information at:

<https://mrcc.purdue.edu/>

<https://ag.purdue.edu/indiana-state-climate/>

Winter Weather Terms and “Headline Criteria”

Winter Weather Definitions

- **Freezing Rain** – Rain falls as liquid and then **freezes on contact**
- **Sleet** – Raindrops freeze into ice pellets prior to reaching ground.
- **Snow** – An aggregation of many ice crystals
- **Graupel** – Snowflakes which have been heavily rimed. Also called snow pellets.

Winter Weather Definitions

- **Snowfall** - Snow that falls and accumulates during a period of time between measurements.
- **Snow Depth** - The combined total depth of both old and new snow on the ground. Usually measured once per day

Winter Weather Definitions

SNOW:RATIO

The percentage of water within a sample of snow is called "snow ratio". An old rule of thumb was that for every 10 inches of snow, there would be 1 inch of water (10:1).

However, snow ratios can vary dramatically around the country and from event to event.

Variables that affect snow ratio

Depth of the "warm" layer from the surface into the snow-producing cloud.

Amount of ice in the snow-producing cloud.

If it's windy, snowflakes can fracture, losing their "lacy" structure.

Deep cold leads to higher snow ratios.

Rain

Wet Snow

Normal/Usual Snow

Dry Snow

Snow:Liquid Ratio 0:1

5:1

10:1

15:1

20:1

30:1

Precipitation Types (PType)

SNOW

No melting
has occurred.

SLEET

Snow melts and
refreezes before
reaching the surface.

FREEZING RAIN

Snow melts and
refreezes on contact
with the surface.

RAIN

Snow melts and
does not refreeze.

Hazardous Weather Outlook

Daily Hazardous Weather Outlooks Give You “Heads Up” Information

- **Issued every day between 5 AM and 7 AM**
- **Updated as necessary throughout the day**
- **Outlines potential weather hazards expected over the next 7 days**
- **Potential storms mentioned once forecaster confidence reaches 30 percent**

Hazardous Weather Outlook
National Weather Service Indianapolis
515 AM EST Sat Feb 13 2021

.DAY ONE...Today and tonight.

Snow will spread across the area late today and tonight. Accumulations of 1 to 2 inches are expected north of I-74.

.DAYS TWO THROUGH SEVEN...Sunday through Friday.

Snow will continue on Sunday with an additional one to two inches possible north of I-70.

Minimum wind chill values between 5 below zero and 10 below zero will be possible late Sunday night into Monday morning.

Snow chances are expected to increase again Monday into Tuesday, with potential for moderate to heavy snow accumulations across the entire area.

Watches, Warnings, & Advisories

These “headlines” may be issued for lower criteria when greater impacts expected

Watches

Winter Storm Watch:

Conditions favorable for a winter storm event, which is a threat to life or property.

Advisories

Winter Weather

Advisory:

Issued for one or more of the following:

- Snow of 3-5” in 12 hrs
- Sleet < ½”
- Freezing rain with sleet/snow
- Blowing snow

Freezing Rain Advisory:

Ice accumulation < ¼”

Warnings

Winter Storm Warning:

Heavy snow of 6” in 12 hrs or 8” in 24 hrs, or sleet of ½” or more

Ice Storm Warning: Ice accumulation ¼” or more

Blizzard Warning:

Blizzard conditions for at least 3 hours

General Winter Storm Event Timeline

4-7
Days

- Focused on general overview, trends and storm potential
- Hazardous Weather Outlook, Forecast Discussions

1-3
Days

- Increasing confidence as storm track becomes clearer (watches if needed)
- Confidence, probabilistic, & potential amount graphics created & updated frequently

0-36
hours

- Fine tune forecast & narrow down details
- Warnings & advisories if needed with details on location and timing
- Situation Reports, Social media posts, graphics and updates

After
Event

- Data collection/quality control of reports & finalize snowfall maps
- Post summary information on local NWS webpages

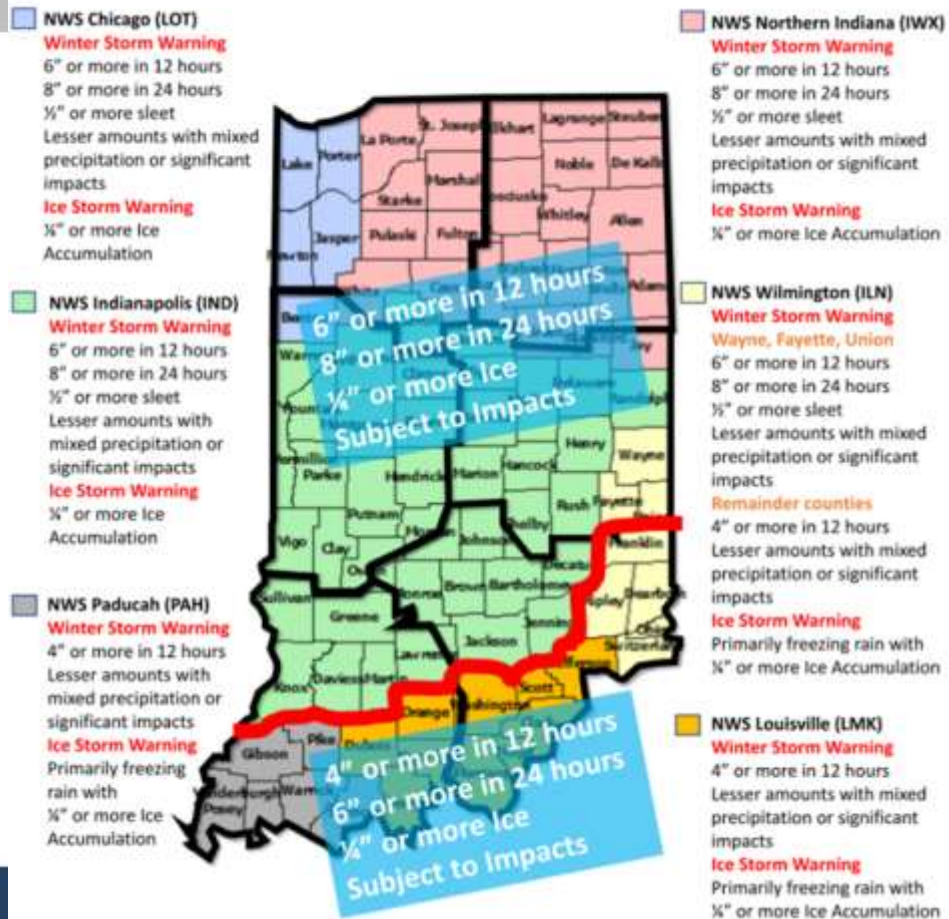

NWS Indiana Winter Warning Criteria

Criteria Varies Across the State

- Lower criteria (amounts) far south and southeast (PAH, LMK, ILN)
- Timing and Impacts may alter when warnings are issued from event to event for entire state
- Advisories are issued for events where warning criteria are not expected to be met but hazardous conditions could develop

Snow Squall Warnings

- **Warning Criteria (30-60 minutes each)**

Reliable reports (Radar, INDOT, webcams, road network observations etc.) of snow squalls meeting or exceeding either of the following two conditions:

- Visibility 1/4SM or less in snow with sub-freezing ambient road temperatures
 - Plunging temperatures behind an arctic front sufficient to produce flash freezes, along with a significant reduction in visibility from falling and/or blowing snow.
- In those instances when lesser impacts are expected, a Special Weather Statement (SPS) can be issued
 - Snow squall warnings will not be issued if winter storm warnings or blizzard warnings are already in effect

Freezing Rain and Ice Climatologies

The average annual number of days with freezing rain, based on 1948-2000 data. From Changnon and Karl, 2003.

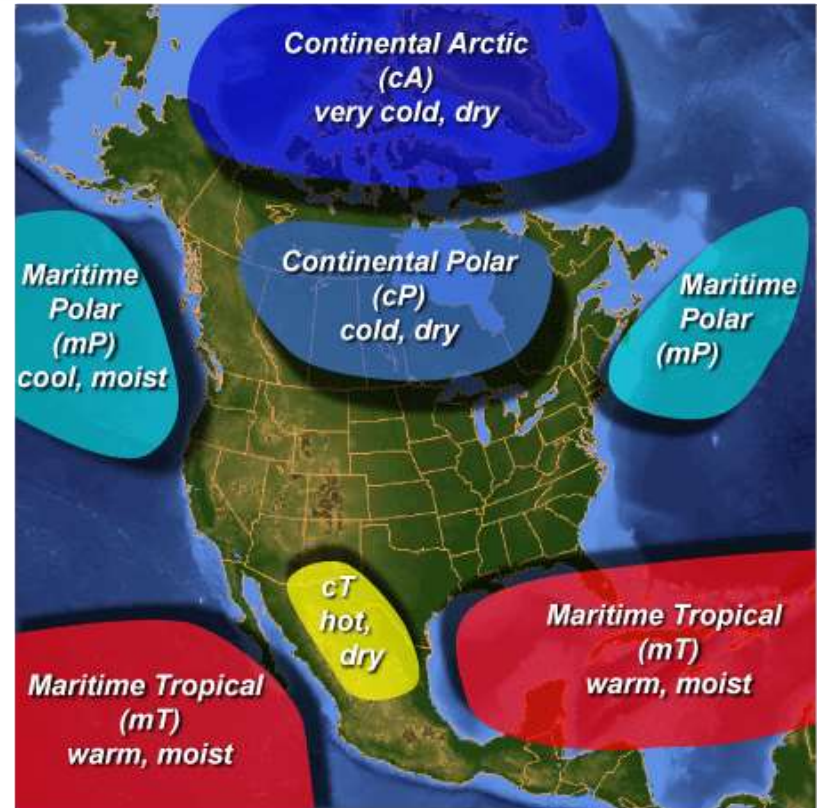

Indiana Winter Weather and Associated Patterns

Air Masses of Winter

- Our typical winter air mass is Continental Polar, cold and dry
- For heavy snow, we usually need moisture from the Gulf of Mexico - Maritime Tropical air
- Too much Maritime Tropical air can mean mixed precipitation

Winter Influences - "Teleconnections"

La Niña:

- Retracted Jet Stream
- More meridional flow
- Blocking over N. Pac
- Stronger Hudson Bay Low

Low

- More Arctic outbreaks

El Niño:

- Extended Jet Stream
- More zonal flow over U.S.
- South shift of storm track
- Weaker Hudson Bay Low
- Fewer Arctic outbreaks

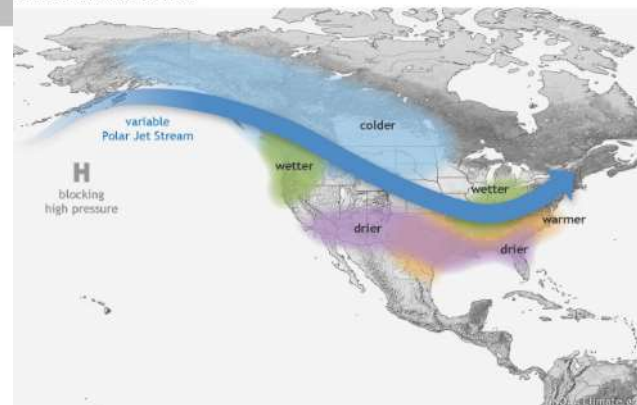

December 1998

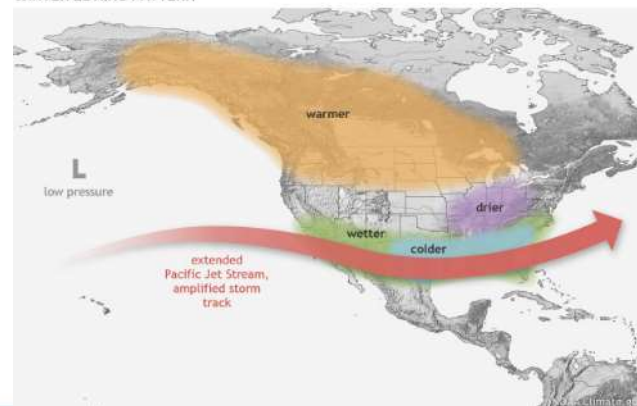

December 1997

WINTER LA NIÑA PATTERN

WINTER EL NIÑO PATTERN

Winter Influences - "Teleconnections"

North Atlantic Oscillation:

- Positive and Negative

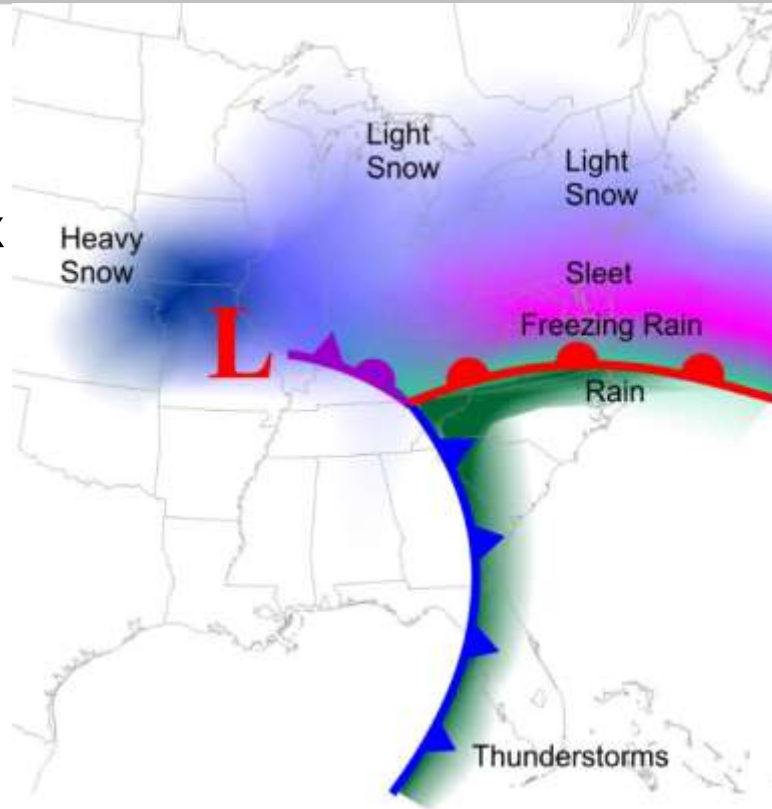

Winter Influences - "Polar Vortex"

Influence of Track on Precipitation Type

Blue: Snow
Pink: Wintry Mix
Green: Rain

- Snow generally north and west of surface low track
- Freezing rain/sleet near and just north of surface warm front
- Rain along and south of warm front and surface low track
- Thunderstorms/heavy rain along cold front

Influence of Track on Precipitation Type

Blue: Snow
Pink: Wintry Mix
Green: Rain

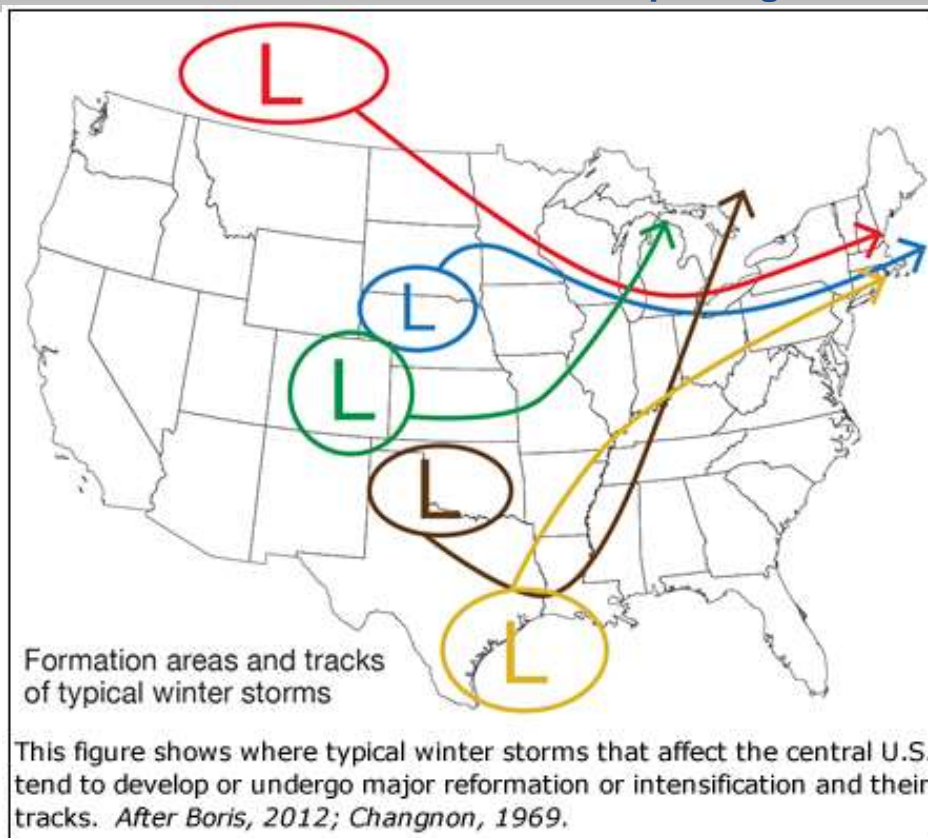

Be cautious with weather model depictions of precipitation types

Weather Systems

Main Winter Storm Tracks Impacting Indiana

Alberta Clipper Systems

- Typically 1-3 inches snow north of surface low track
- Little/no snow south of surface low track
- Liquid snow ratios often between 20:1 and 30:1 ("dry snow")
- Reinforcing arctic air follows surface low
- Snow squalls most likely with this storm type

Alberta Clipper Systems

Surface and Upper Level Features

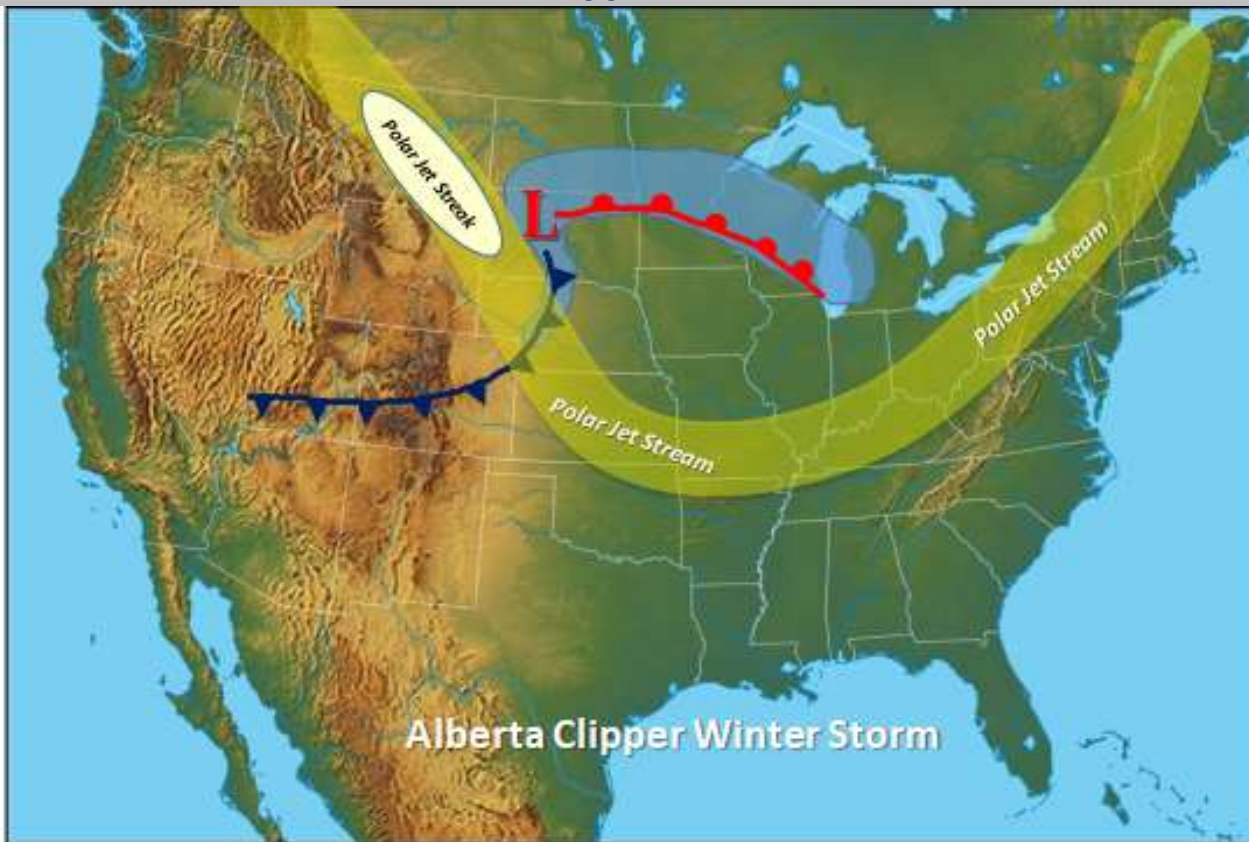

Alberta Clipper Winter Storm

Alberta Clipper Systems

Surface and Upper Level Features

Alberta Clipper Systems

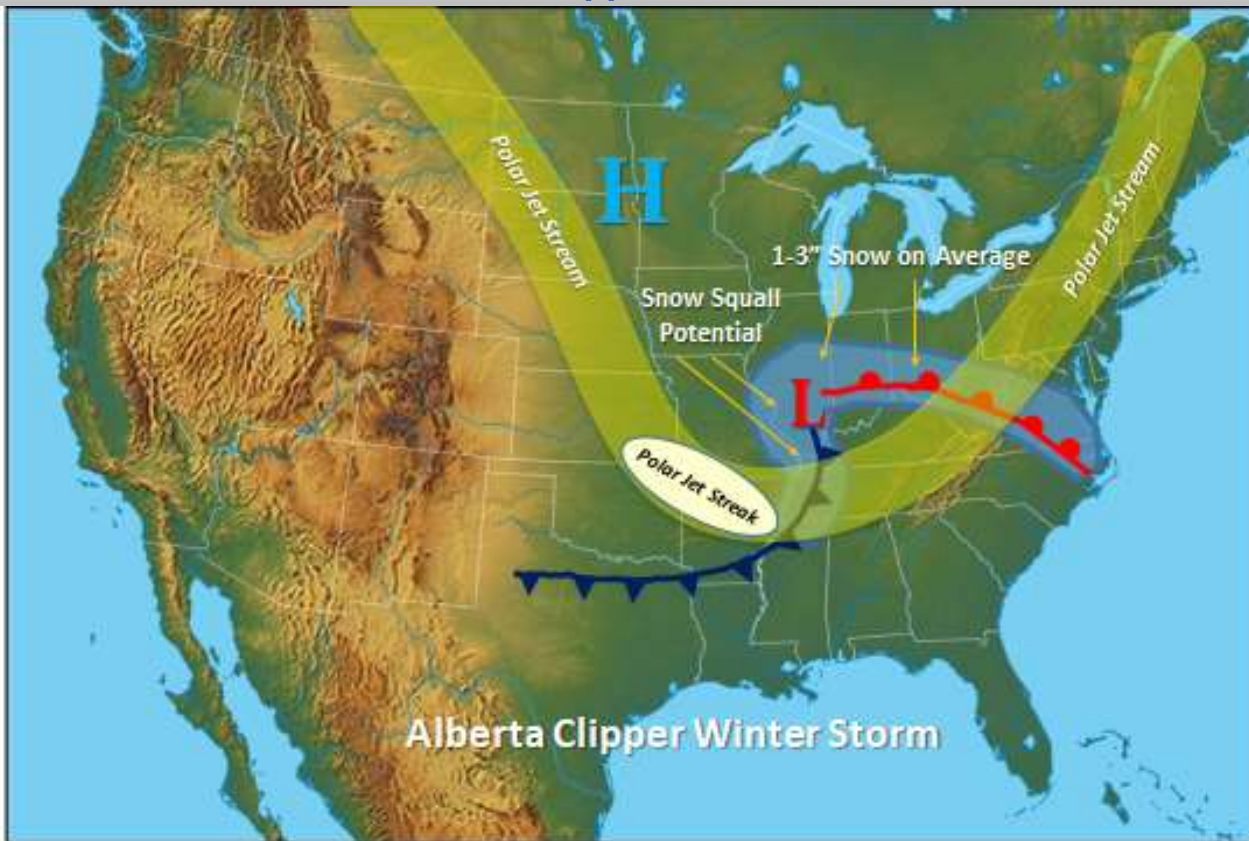

Surface and Upper Level Features

Alberta Clipper Systems

Panhandle Hook Systems

Figure 3-2. Location of the center of the surface low-pressure system (denoted by "L") at 6-hour intervals between 6 a.m. CST on February 12, 2007, and 12 a.m. CST on February 15.

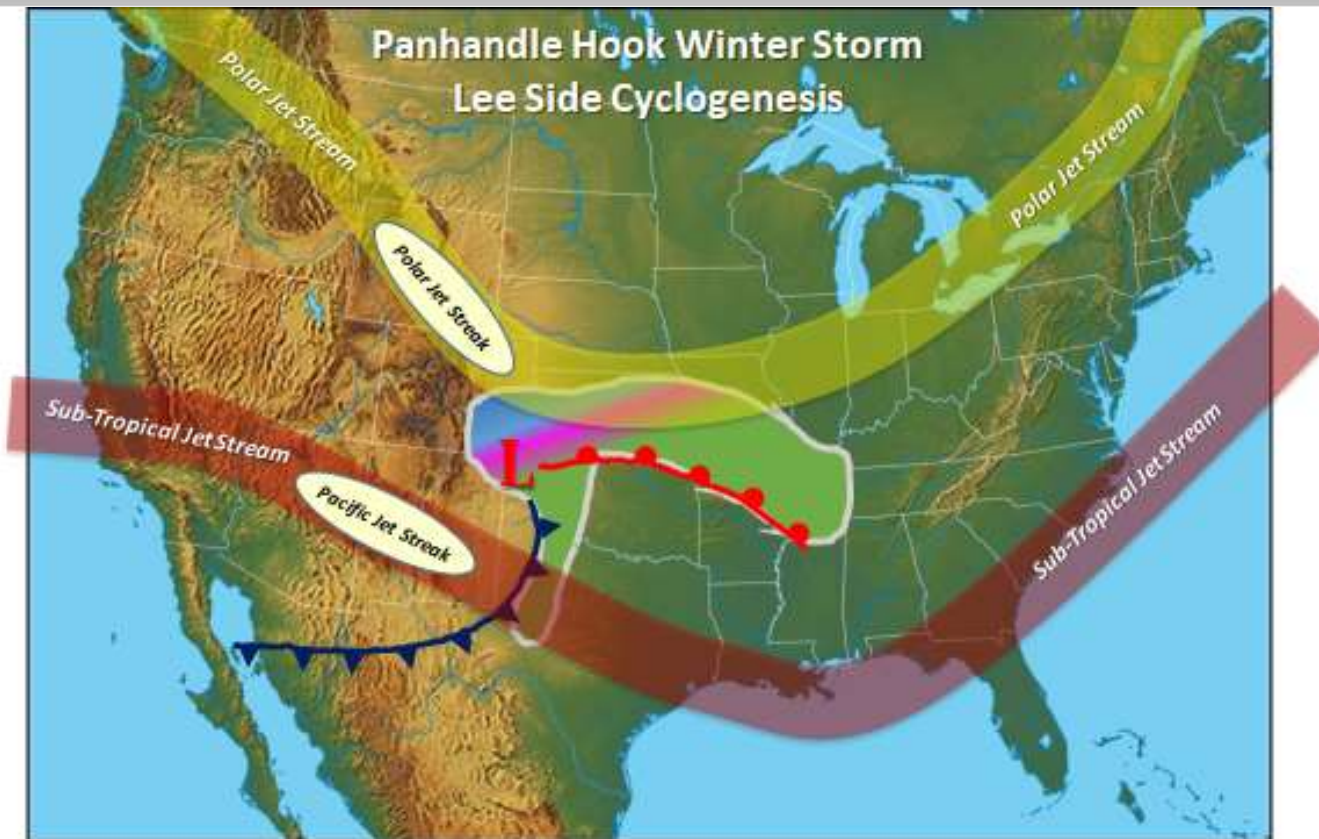

- Typically 6+ inches snow well north of surface low track
- Rain near and south of surface low track
- Freezing rain/sleet sometimes between low track and heavy snow
- Liquid snow ratios often between 8:1 and 15:1 ("wet snow")
- Arctic air may follow, sometimes with an Alberta Clipper 1 to 2 days later

Panhandle Hook Systems

- **Typical Watches/Warnings and Advisories with a Panhandle Hook System**
- **Feb 12-16th 2021 Winter Storm**
- **These storms impact a large part of the country**
- **Often followed by a clipper system in 1-2 days**

Other Winter Weather Hazards and Concerns

Other Indiana Winter Weather Events

Lake Effect Snow Can Extend into Central Indiana

Lake Effect Snow

Lake Effect Snow 1/21/14
Griffith, IN
Jason Lee Miller

- Significant lake effect snows are most common in parts of northwest Indiana, but occasionally in northeast Illinois.
- Lake effect can have a **HUGE** impact on driving with greatly reduced visibilities and sudden changes in road conditions over short distances.
- Lake effect snow season usually runs from November through March.

Other Indiana Winter Weather Events

Freezing Rain and Ice Storms

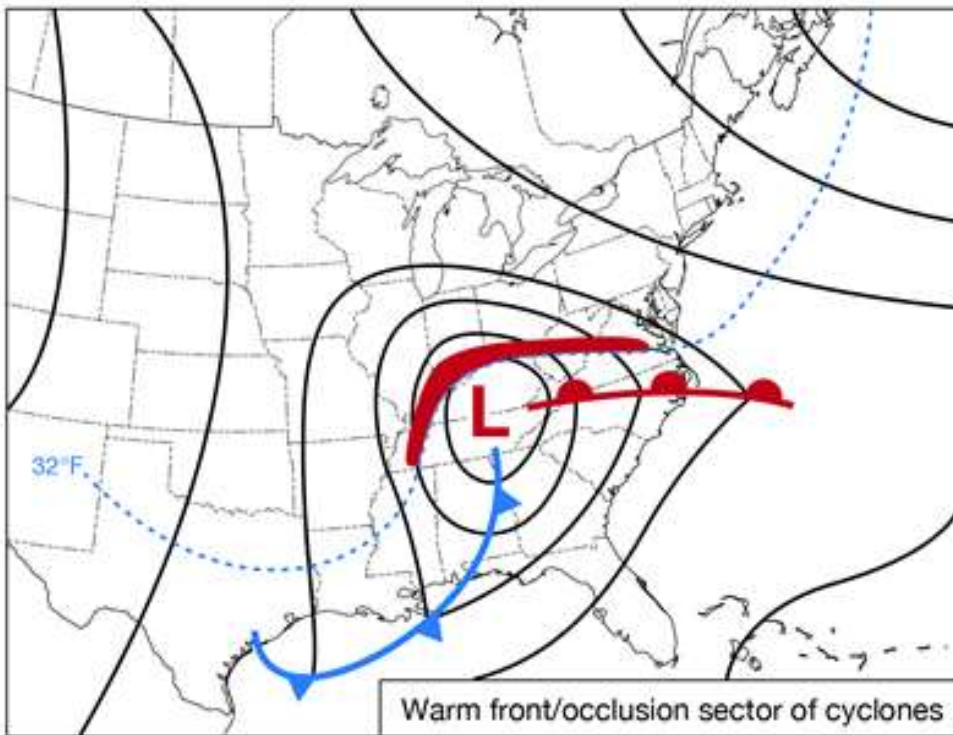

- **Large accretion of ice and wind can result in extensive tree damage and power outages**
- **In extreme cases, massive destruction of the power grid can result in power outages lasting for weeks during the coldest time of year**
- **It only takes a few tenths of an inch of ice accretion to bring down tree limbs and utility lines.**
- **Ice accretion of an inch or more has been observed in the past**

Ice Storms

Setup 1 - Freezing rain and icing generally “light” (0.01” - 0.25”)

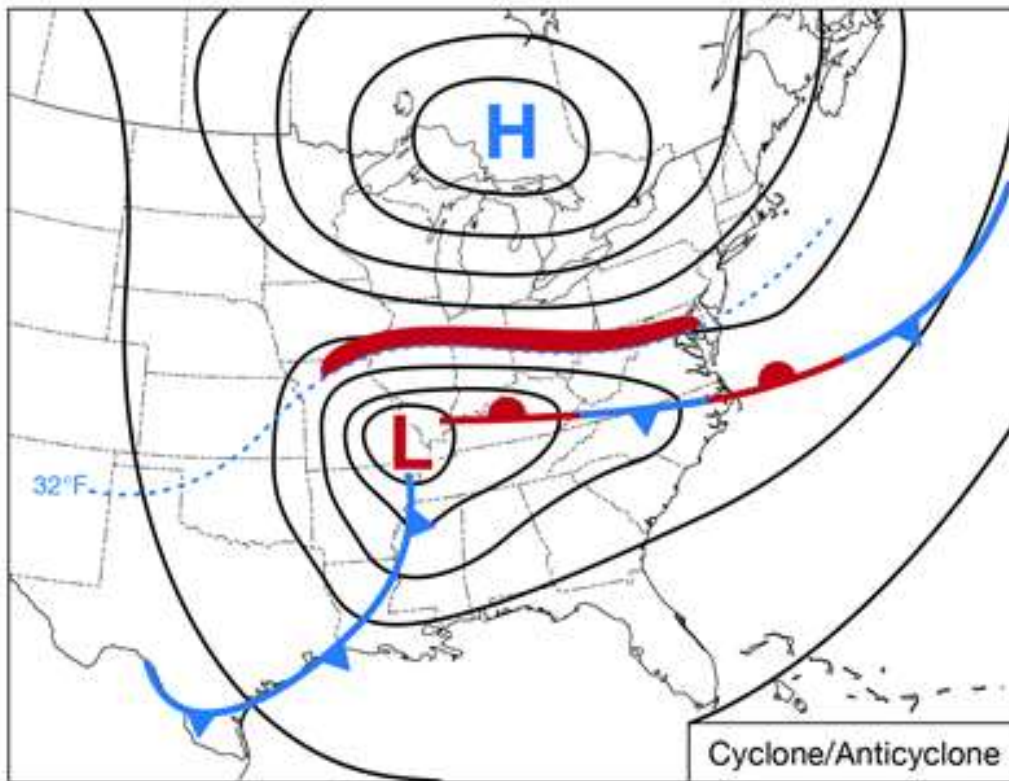

2009 Ice Storm Damage.
Photo courtesy NWS Paducah website

Ice Storms

Setup 2 - Freezing rain and icing generally “Heavy” (0.25” - 1.00+”)

- High pressure to north “locks in” cold air
- Prolonged period of freezing rain, often moderate to heavy rates
- Surface temperatures may remain below 30°F
- Severe icing potential
- Strong winds between the low and high pressure leads to significant damage

Ice Storms

FREEZING RAIN IS THE WORST

- ◆ Freezing rain is more dangerous than snow, as ice can form on pavement
- ◆ Watch out for falling branches and powerlines
- ◆ Don't drive if there is, or recently was, freezing rain

weather.gov 

Don't Forget Severe Weather!

Severe Thunderstorms, Tornadoes and Heavy Rain Can All Occur in the Winter

December 23rd, 2015 - Early Evening

- Strong winter storms can bring mild temperatures, heavy rain and even severe storms to Indiana
- Low pressure usually tracks near or just to our north
- Strong wind shear can lead to tornadoes
- A “Thin Line” of thunderstorms is the most likely scenario (sometimes no thunder)

Don't Forget Severe Weather!

Severe Thunderstorms, Tornadoes and Heavy Rain Can All Occur in the Winter

Indiana Tornadoes by Month and Rating 1980-2020

Don't Forget Severe Weather!

Severe Thunderstorms, Tornadoes and Heavy Rain Can All Occur in the Winter

Accumulated Precipitation (in)

February 19, 2018 to February 21, 2018

Accumulated Precipitation (in): Percent of 1981-2010 Normals

February 19, 2018 to February 21, 2018

Extreme Rainfall and Flooding Events February 19th – 21st 2018

2" to 7.5" Rainfall Statewide

400-800 percent of normal monthly rainfall in just 3 days!

Winter months can have more runoff due to frozen ground and lack of growing vegetation

How to Measure and Report Winter Precipitation

Obtain a Quality 4" Rain Gauge

Not required but helpful. More info at www.cocorahs.org

Overflow Catch Tube

Funnel Top

Inner Measuring Tube

Properly Install Your Rain Gauge

www.cocorahs.org

- Location, accuracy & consistency are important
- Install in an open area, away from trees, buildings and any obstructions. “Twice the height” of nearest building or trees
- Make sure top of gauge is several inches above top of post to avoid “splattering”
- Refer to cocorahs.org for more information

Properly Maintain Your Rain Gauge

Most important step if you have a 4" rain gauge!

Remove the funnel and inner tube, otherwise snow will clog the funnel.
We recommend leaving the inner tube inside all winter, it can freeze and break!

How to Measure Snowfall

Snow that has recently fallen

- Use a ruler or yardstick! Measure to nearest **tenth of an inch**
- Ideally, use a snowboard to measure on. Any flat light colored board about 2ft x 2ft will do
- After you measure the snow on the board, clear it off and place the board on top of the snowpack
- Only measure and clear the board off a maximum of once every 6 hours, to allow for compaction of the snow as it falls
 - If you can't measure every 6 hours, you can measure once per day

How to Measure Snowfall

Snow that has recently fallen

- If snow falls and melts on contact, never sticking, there is a Trace of snow (T)
- If snow falls and sticks, then melts, snowfall is the maximum depth reached before it begins to melt
- Sleet (ice pellets) count towards snowfall, freezing rain (glaze) does not
- If there is significant drifting, take numerous measurements including some low and high areas, and take an average

How to Measure Snow Depth

Snow that has fallen over time and remains on the ground

- Snow depth is total amount of snow on the ground, measured once per day, usually at 7am
- Report snow depth to the nearest **half inch**
- Take about 10 different measurements around your yard and average
 - Avoid un-natural high and low areas (drifts created by buildings)
- **Do Not** always stick ruler all the way to base of ground if in grassy areas
- Snow depth can decrease even with temperatures below freezing - “settling”

How to Make a Report

Reporting often is encouraged

- Become a CoCoRaHS observer and report via their website, cocorahs.org
- Share your report on Facebook or Twitter via your local NWS office (@NWSIndianapolis)
- Send measurements and pictures to our email: nws.indianapolis@noaa.gov
- Call our spotter hotline - **Reports Only!**
 - **1-800-499-2133**

When to Make a Report

Reporting often is encouraged

- Storm Total Snowfall after the storm tapers off, especially for events of 3 inches or more
- Snowfall increases of two inches or more during the storm or significant impacts observed
- Precipitation type changes that persist
- Sleet that persists for more than 30 minutes
- Ice accretions every tenth of an inch
- Thundersnow is observed
- Heavy rainfall and significant flooding

Winter Weather Safety Information and Online Resources

Before Wintry Weather: Prepare!

Postpone Travel, Have a Preparedness Kit Ready and Available

BUILDING AN EMERGENCY SUPPLY KIT FOR YOUR CAR

WHY?
BECAUSE YOU NEVER KNOW WHEN YOU WILL ENCOUNTER WINTER WEATHER OR AN EMERGENCY ROAD CLOSURE.

AMERICA'S PrepareAthon!
ALWAYS GO HOME PREPARED.

- CELL PHONE CHARGER
- FIRST AID KIT
- JUMPER CABLES
- TIRE CHAINS OR SNOW TIRES
- FLARES
- WATER, SNACKS
- FULL TANK OF GAS
- FLASHLIGHT
- BAG OF SAND OR CAT LITTER
- BOOTS, MITTENS, WARM CLOTHES
- BLANKET
- TOW ROPE
- SHOVEL, ICE SCRAPER, SNOW BRUSH

What to Include in Your Winter Weather Preparedness Kits

Home	Car
Extra Food, Water	Full tank of gas
First Aid Supplies	Snow Shovel and Brush
Extra Medicine and Baby Items	Water, Snacks
Extra Pet Supplies	Blankets, Warm Clothes
Portable Charger	Jumper Cables
Emergency Heat Source	First Aid Kit
(Used properly and safely)	Phone Charger
Smoke Alarm	Sand or Kitty Litter
Carbon Monoxide Detector	Flashlight

One or Two Inch Snowfall Can Create Havoc

**“Minor” winter events are more deadly on
Midwestern roadways than notable winter storms.**
- Stephen Strader, Walker Ashley (NIU)

Due to:

- **Heavier motor vehicle traffic.**
- **Possibly more dangerous road and visibility conditions than perceived by drivers in these situations.**

When roads are wet, slushy, ice or snow covered:

- **SLOW DOWN**
- **Increase following distance**

Photo: Rich Henquinet

Know What to Do When on the Road

WINTER DRIVING WHILE ON THE ROAD

Don't crowd the plow.

The road behind an active plow is safer to drive on. Give them plenty of room to work and only pass when it is safe to do so.

Change the way you drive.

Drive slower than normal and leave more room between you and surrounding vehicles when roads are wet, snowy or icy. **DO NOT** use cruise control, brake quickly or take sharp turns.

Stay alert.

Make sure you keep your gas tank over half full and keep a close eye on road conditions, which can change rapidly. On road trips, take breaks often so you can stay focused on the road.

After Wintry Weather: Clean-Up

Take it easy when shoveling:

- **Take frequent breaks**
- **Stay hydrated**
- **Stay warm and dry**
- **Have someone check on you**

The weight of snow varies between every storm!

Heavy Snow can be a **Health Risk**

- ❄ Heavy wet snow can put a big strain on the heart
- ❄ Stay hydrated and take frequent breaks
- ❄ Only move small amounts with each shovel pass

Take it slow when shoveling snow

Potential Winter Storm Impacts

No Impacts	Impacts not expected.
Limited Impacts	Rarely a direct threat to life and property. Typically results in life inconveniences.
Minor Impacts	Rarely a direct threat to life and property. Typically results in an inconvenience to daily life.
Moderate Impacts	Often threatening to life and property, some damage unavoidable. Typically results in disruptions to daily life.
Major Impacts	Extensive property damage likely. Life saving actions needed. Will likely result in major disruptions to daily life.
Extreme Impacts	Extensive and widespread severe property damage. Life saving actions will be needed. Results in extreme disruptions to daily life.

WSSI Component	Purpose
Snow Amount Index	Impact to transportation from total amount of snow and snowfall rate
Snow Load Index	Impact from weight of snow and potential damage to trees and powerlines
Blowing Snow Index	Impact of blowing and drifting snow on transportation
Ground Blizzard Index	Impact of pre-existing snow combined with very strong winds on transportation
Flash Freeze Index	Impact on transportation in situations where temperature falls rapidly below freezing during or just after precipitation
Ice Accumulation Index	Impact of ice accumulation on transportation and also tree and powerline damage

Winter Storm Timeline Review

4-7
Days

- Focused on general overview, trends and storm potential
- Hazardous Weather Outlook, Forecast Discussions

1-3
Days

- Increasing confidence as storm track becomes clearer (watches if needed)
- Confidence, probabilistic, & potential amount graphics created & updated frequently

0-36
hours

- Fine tune forecast & narrow down details
- Warnings & advisories if needed with details on location and timing
- Situation Reports, Social media posts, graphics and updates

After
Event

- Data collection/quality control of reports & finalize snowfall maps
- Post summary information on local NWS webpages

Weather Ready Nation Ambassadors

IT'S NOT ENOUGH TO KNOW THE WEATHER...
WE MUST PREPARE FOR IT!

Building a Weather-Ready
Nation is a team effort!

A Weather-Ready Nation
understands the dangers of
extreme weather, water, and
climate events, and responds with
wise decisions that save lives and
prevent economic losses.

Your organization can help build
a Weather-Ready Nation
as an Ambassador!

Take the next step:
