Period of Record Information	
Little Rock Adams Field	
Temperature	01 Jul 1879 to Present
Rainfall	28 Jun 1874 to Present
Snowfall	28 Jun 1874 to Present
Snow Depth	Partial Records 20 Mar 1876 to 31 Dec 1890 Complete Records 01 Jan 1891 to Present

The first weather observations in Little Rock were taken by William Woodruff, the founder of the *Arkansas Gazette*. In 1839, Army surgeons began taking periodic weather observations. Signal Service Observations began April 21, 1873, with the installation of a river gauge. A voluntary observer sent observations each day by telegraph. The first observer was Charlie Conradt, a riverboat Captain. In 1876, Albert Cohen, a local jeweler and watchmaker took over. In July 1879, a first-order signal service station was opened, and full observations have been taken daily since then. Little Rock Adams Field opened in the early 1930s, with hourly observations beginning January 15th 1933, taken by the Civil Aeronautics Authority (CAA). The Weather Bureau took over observations at Adams Field on December 2nd, 1938. The downtown office was kept open until 1942. From May 1, 1942 to August 7, 1942, the official record consists of rainfall from the downtown office and temperatures from the airport office. The downtown office closed August 7, 1942, and all data afterward is from Little Rock Adams Field.

Little Rock Weather Observation Site History

Official Little Rock, Arkansas Weather Observation Sites (1874-Present)

Miscellaneous Data: Odds of a White Christmas in Little Rock

Since snowfall records were started in Little Rock in 1874, there have been relatively few times when snow was seen on Christmas Day.

Looking at the entire period of record from 1874 to the present time, measurable snow fell on Christmas Day in four years, with trace amounts in eight years. In three other years, no snow fell, but there was measurable snow already on the ground.

Only three times, in 1876, 1963, and 2004 was the ground covered with snow the entire day. Overall, there has been snow cover for at least part of Christmas Day 12 times. This includes both measurable snow and trace amounts.

Going just by the averages, snow on Christmas in Little Rock is seen about once every eight years. This includes measurable snow falling or snow already on the ground from previous storms, as well as trace amounts.

Measurable snow falling on Christmas, or measurable snow left over from previous storms is seen about once every 25 years.

Just by the averages, measurable snow falling on Christmas is seen about once every 50 years.

In 1887, 1914, 1918, 1935, 1939, 1975, and 2009, snow fell with no accumulation.

In 1876, two inches of snow was on the ground from a snowfall on Christmas Eve.

In 1879, rain began around 7 AM Christmas Eve, changing to a mix of sleet and snow during the afternoon. By night, the ground was lightly covered with snow. The snow had stopped before midnight, but the ground remained covered Christmas morning.

In 1897, one inch of snow fell on Christmas Day between 450 AM and 1245 PM. By 7 PM that night, only a trace of snow remained on the ground.

In 1913, snow started at midnight and continued until 1130 AM Christmas Day. A total of 1.5 inches of snow fell, but during the afternoon, the temperature rose to 40 degrees, and most of it melted. By that evening, only a trace of snow remained on the ground.

On Christmas Day in 1926, sleet began falling around 6 AM, and then changed over to snow. The snow continued until 130 PM. 1.7 inches of sleet accumulated, with 2.5 inches of snow on top of that. The snow stayed on the ground through the 28th. Ironically, there was a serious tornado outbreak in Arkansas on Thanksgiving that year.

On Christmas Eve in 1962, it snowed 1.5 inches during the day, but melted quickly during the night, leaving only patches of snow on the ground Christmas morning, which melted that day.

In 1963, four inches of snow was on the ground Christmas Day, left over from a 9.8 inch snowfall on December 22nd.

In 1975, it snowed on Christmas afternoon. In many of the hills around the city, up to two inches of snow accumulated. For those living in the lower elevations of the city, rain and snow was mixed, and little of the snow remained on the ground. By the next day, most of the snow had melted. No snow accumulated at Little Rock.

In 1983, a total of two inches of snow fell in the metropolitan area earlier in the week, and there was some ice on top of that. Due to melting and refreezing, there was about an inch of ice and snow left on the ground in the metro area by Christmas Day, but none remained on the ground at Little Rock.

In 1990, 2.4 inches of snow and sleet fell on December 22-23 and most of it remained on the ground through Christmas Day in some of the higher elevations of the metropolitan area. However, none remained on the ground at Little Rock.

In 2000, there was some snow on the ground in northern and western Arkansas on Christmas Day. At Little Rock, a trace of sleet and freezing rain had accumulated. That day, one of the largest ice storms in recorded history overspread the state, shutting the state down through the remainder of the year.

In 2004, snow fell in much of northern and central Arkansas on December 22nd. In Little Rock, roughly three inches of snow was measured, with one inch still on the ground on Christmas Day.

In 2009, light snow began a little before midnight on Christmas Eve. It ended around 3 AM Christmas morning, with patches of snow on the ground through early morning.

In 2012, sleet began around mid-morning. It mixed with rain and freezing rain during much of the day, with ice accumulations of a tenth to a quarter of an inch on trees and power lines. By late afternoon, the precipitation transitioned to sleet again, then snow. Winds were gusty, with heavy snow in the evening. At times, blowing snow significantly reduced visibility and created near-blizzard conditions. By midnight, nine inches of snow had accumulated. By the time the storm ended on the early morning of the 26th, 10.3 inches of snow was on the ground at Little Rock.

Miscellaneous Data: Early Weather Observations at Little Rock

The earliest weather observations at Little Rock were taken in late 1821 by William Woodruff, founder of the *Arkansas Gazette*. Weather characteristics and sporadic data continued to be mentioned in local newspapers for over 50 years. In 1839, the first official government observations were recorded in Little Rock by Army surgeons.

The data below is the result of pouring over many years of newspapers and various other publications. The primary sources of data were: the *Arkansas Gazette* and many other local, state and national newspapers, records of the Little Rock Arsenal, Little Rock Hospitals Department, and an AMS Journal Publication: *Weather and Crops in Arkansas 1819 to 1879*.
