The Boone-Marion County tornado began just to the west of Bellefonte Road, near the intersection of Maxie Camp Road in Boone County, damaging trees and a few power poles as it crossed the road. A few homes sustained some damage, mainly to their roofs and the southern and southeastern exterior walls. A hay barn was also completely destroyed. The tornado then kept moving east into an open field, snapping trees in its path and along Maxie Camp Road. The tornado crossed US Highway 65, moving over the Boone County Sheriff's Department Building and an Arkansas State Police Troop Center. The two buildings sustained very minor damage, mainly consisting of missing shingles and bent light poles. A loaded trailer of the Boone County Sheriff's Department was lofted onto a gate, and then further tossed onto an Arkansas State Patrol car, both sustaining major damage. Just east of the highway, a storage unit complex sustained damage to all three of its storage buildings, and an RV was flipped on its side. Another business building behind the storage units only sustained damage to glass windows and a broken garage door. Just to the south of the storage complex, another large metal building with multiple bay doors facing the prevailing tornado forward speed winds was badly damaged, with most walls collapsed. The tornado kept moving east, expanding in width, and snapping trees and power poles along Maxie Camp Road. As the tornado approached the intersection of Maxie Camp and Starkey Road, a mobile home was completely lofted and destroyed. Extensive tree damage was observed all along the north-south portion of Maxie Camp Road. A couple homes, one with a CMU footprint and the other with a partial concrete pad and open crawlspace concrete footing were completely lifted off of their bases and destroyed, with below code anchoring methods found on both of these homes. Trees in the immediate vicinity of the destroyed homes were snapped, and a large pickup truck was rolled onto its roof. This was the location of the worst observed structural damage, consistent with EF3 wind speeds of up to 145 mph. A resident of one of the destroyed homes sustained nonlife-threatening injuries. The tornado then started to move due northeast, paralleling US Highway 62, moving just southeast of Olvey, and causing mainly tree damage and damaging small outbuildings. Boone County Sheriff's Department reported one fatality in Boone County inside a destroyed mobile home, near the Olvey area. This tornado then exited Boone County and entered Marion County.

Direct Fatalities: F26MH

Location Date/Time Deaths & Property & Event Type and Details
Injuries Crop Dmg

The Boone-Marion County tornado continued into Marion County from Boone County, paralleling just south of US Highway 62, near Pyatt. Marion County EM reported three fatalities from this tornado.

Extensive tree damage was observed across several county roads,

and a few mobile homes were tossed and destroyed on Marion County

Road 4010. After crossing Marion County Road 4010, the tornado

path width increased to its widest point, and likely maintained a

maximum path width of around 2000 yards for a few miles, via

satellite imagery, as it moved through the Crooked Creek Valley.

Extensive tree damage was observed along and around Crooked

Creek, and moderate damage to the second level of a tin home was

found as well. The tornado kept moving northeast, snapping most

trees in its path as it crossed Crooked Creek multiple times and

eventually, Marion County Road 4006, where it moved over the Snow

 $\label{lem:cossed} \mbox{Access Campground Area. The tornado then crossed US \mbox{ Highway}}$ 

62 again near the small municipality of Snow, causing minor to

moderate damage to a few homes around the area. As the tornado

crossed US Highway 62, the path width began to decrease, and it

began moving more eastward. Mainly tree damage was observed to

the north of US Highway 62, and eventually it crossed State

Highway 125, and Marion County Road 3032, where more

extensive tree damage was observed, and another mobile home,

which was untethered, was lofted and completely destroyed. The  $\,$ 

tornado continued to move east-northeast, causing mostly tree

 $\label{eq:damage} \mbox{damage, before eventually dissipating to the northwest of Summit.}$ 

This tornado tracked across two counties and was rated an EF3 with maximum estimated wind speeds

of up to 145 mph.

Tornado (EF1, L: 11.80 mi, W: 1760 yd)

05/26/24 03:17 CST 0 Source: NWS Storm Survey

The Briarcliff Tornado began just west of AR Hwy 14 on Marion County Road 5002 and Abbey Lane, snapping and uprooting trees. The tornado continued across AR Hwy 14 to Marion County Road 6014 and 6011 where it caused minor roof damage to some homes and continued to snap and uproot trees. On Backway Road, a doublewide shifted off its foundation a few feet and had a large tree fall on it. Across the street, an outbuilding sustained damage to the roof and flooring. The tornado continued towards Hand Mountain where the path width increased significantly to in excess of 1000 yards, snapping and uprooting numerous trees, and then crossed the White River into Baxter County, followed by Fulton County.

Date/Time Location Deaths & Property & **Event Type and Details** Injuries Crop Dmg

The Briarcliff Tornado continued in Baxter County from Marion County and moved through a small residential area along the White River, pulling siding and shingles off houses in addition to causing significant tree damage. The tornado continued eastward, further expanding in width, and reached a maximum width of up to 1 mile. wide, crossing mostly rural areas and causing significant tree damage, passing across Wild Hog Mountain, and crossing Shipps Ferry Road and Round Rock Trail. As it approached the Arkana and Norfork Village area, the path width contracted slightly, and large swaths of trees were found uprooted and snapped as it crossed the White River briefly once again north of Hwy 341 at Riverside Dr. The tornado continued northeast towards Briarcliff, where mostly tree damage was observed to the west of Highway 5. As the tornado crossed the highway, widespread tree damage became prevalent, with most trees snapped at their trunks. A few structures were severely damaged, including a home, and a metal shop building. The tornado also impacted a local RV/trailer camping park, where five fifth-wheel recreation trailers were tossed and completely destroyed. One fatality was reported out of this area as well. The tornado also moved over a 350 kV transmission line that intersected Hwy 5, snapping several wooden two-poled line towers, and bending two steel two-poled line towers to the ground, indicative of EF2 wind speeds. After crossing Hwy 5, the tornado moved into the Briarcliff residential area, encountering significant topography. 17 injuries were reported within the Briarcliff community. The tornado path width expanded again, reaching a width of up to 1 mile wide for a short duration as it moved through Briarcliff. Significant tree damage was observed over a large portion of the roads in the area, and via satellite imagery. A few homes sustained moderate damage, likely exacerbated by debris and projectiles. The Briarcliff City Hall building, which sat on top of a hill on Scenic Drive, sustained significant structural damage, with most of the second level of the building destroyed, indicative of EF3 wind speeds of up to 140 mph. The tornado then continued to move northeast, moving over several hills on the east side of Briarcliff. A twostory home located off of the Shoal Creek tributary sustained significant roof damage with most of the structure pulled off to the wall plates, and all the surrounding trees to the east uprooted from the road to the waterline. The tornado then crossed the lake, and struck a few peninsulas, where more significant tree damage was observed. After crossing Norfork Lake, the tornado continued northeast on the north side of the lake, moving over mostly rural areas, eventually crossing over the Holiday Hills Resort Area on Baxter County Road 149. A few buildings sustained minor roof damage, and a smaller cabin building had the roof structure pulled off with a few exterior walls collapsed. Most trees around the resort were uprooted as well. The tornado then kept moving northeast into Fulton County.

Flooding of a yard and road was noted near Beebe.									

Thunderstorms developed over central Arkansas, training over the same locations, resulting in areas of flash flooding. Rainfall amounts

of 3 to 6 inches were measured in a short amount of time. Numerous roads between Little Rock to Beebe were impassible.
