In Charge of HSA

DATE

2/5/99

When no flooding occurs, include miscellaneous river conditions, such as significant rises, record low stages, ice conditions, snow cover, droughts, and hydrologic products issued (NWS Instruction 10-924)

[X] No flood stages were reached in this HSA for the month above.

No river or flash flooding occurred across southwest Texas or in southeast New Mexico during the month. Near normal to slightly below normal precipitation was noted across most areas for the month.

Midland International Airport recorded 0.33 inches for the month, which was 0.07 inches below normal.

All but 0.02 inches of precipitation fell on the 29th and 30th, which was mostly a rain event capped off by 0.8 inches of snow early on the 30th. Many areas of the HSA, especially southern sections, did not record any measurable rainfall for the month.

Reservoir levels across the HSA and in northern Mexico remain well below conservation levels and the flood threat remains low.

River products issued:

None
