

Storm Data and Unusual Weather Phenomena - April 2025

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
OKLAHOMA, Western, Central and Southeast				
(OK-Z004) HARPER, (OK-Z005) WOODS, (OK-Z006) ALFALFA, (OK-Z007) GRANT, (OK-Z008) KAY, (OK-Z009) ELLIS, (OK-Z010) WOODWARD, (OK-Z011) MAJOR, (OK-Z015) DEWEY				
	04/01/25 00:00 CST	0		Drought
	04/22/25 06:00 CST	0		
While above-average precipitation occurred across the WFO Norman Forecast Area during April 2025, lighter totals were observed during early portions of the month across northwestern and far northern Oklahoma. This allowed ongoing severe (or greater) drought to remain through the mid-month, before widespread heavy rainfalls ended this concern across the entire area.				
GARFIELD COUNTY --- 1.0 W ENID [36.40, -97.90]				
	04/01/25 17:04 CST	0		Hail (1.00 in)
	04/01/25 17:04 CST	0		Source: Emergency Manager
GARFIELD COUNTY --- 1.0 N ENID [36.41, -97.88]				
	04/01/25 17:05 CST	0		Hail (2.00 in)
	04/01/25 17:05 CST	0		Source: Public
Emergency management relayed multiple images. Event time is estimated from radar observations and additional nearby reports.				
GARFIELD COUNTY --- HUNTER [36.56, -97.66]				
	04/01/25 17:31 CST	0		Hail (1.50 in)
	04/01/25 17:31 CST	0		Source: Fire Department/Rescue
A relayed image. Event time is estimated from radar observations.				
GARFIELD COUNTY --- 0.8 E HUNTER [36.56, -97.65]				
	04/01/25 17:32 CST	0		Hail (2.50 in)
	04/01/25 17:32 CST	0		Source: Public
Emergency management relayed an image. Event time is estimated from radar observations.				
KAY COUNTY --- 1.6 NNW BRAMAN [36.94, -97.34]				
	04/01/25 17:54 CST	0		Hail (1.50 in)

PONTOTOC COUNTY --- 1.8 ENE ADA [34.78, -96.65]				
	04/02/25 06:12 CST		0	Hail (1.25 in)
	04/02/25 06:12 CST		0	Source: Public
The report was relayed through mPING.				

A bi-modal (in time) severe weather episode occurred across Oklahoma and western-north Texas from the evening of the 1st into the early morning of the 2nd. An initial bout of activity featured scattered supercell thunderstorms across north-central Oklahoma and the Red River Valley. Persistent low stratus into the afternoon of the 1st led to a narrow warm sector by the early evening, with supercell thunderstorms displaying a slightly "elevated" character. These thunderstorms produced large hail before weakening quickly. As the main (strong) upper trough spread eastward into the early morning hours, additional thunderstorms developed along an advancing cold front. This linear band of thunderstorms produced only intermittent reports of large hail and wind damage despite a strongly sheared and unstable boundary layer.

Storm Data and Unusual Weather Phenomena - April 2025

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
LOVE COUNTY --- 2.1 ESE BURNEYVILLE [33.89, -97.27]				
	04/03/25 07:10 CST		0	Thunderstorm Wind (MG 63 kt)

The report was relayed through Spotter Network. Event time adjusted based on radar observations.				
An intense thunderstorm moved from western-north Texas into southern and east-central Oklahoma during the early hours of the 5th. While the boundary layer was relatively stable during this time, due to a significant warm layer centered around 700 millibars/1 km, widespread and intense damaging winds were observed with this thunderstorm. Reports of large hail, and associated damage due to wind-driven hail, were also received.

The report was relayed through mPING.				
An approaching upper system instigated scattered thunderstorm development during the late evening of the 18th. This development was most prominent along/near a quasi-stationary boundary, stretched along the Interstate 44 corridor during this time. Strong wind shear and instability promoted the development of a few organized thunderstorms, which produced large hail and caused wind damage.				
LOVE COUNTY --- 5.0 WSW RUBOTTOM [33.92, -97.54], 4.5 WSW RUBOTTOM [33.93, -97.54]

Storm Data and Unusual Weather Phenomena - April 2025

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
This tornado moved across southeastern Johnston County, developing southeast of the Tishomingo National Wildlife Refuge near the community of Bee , and moving northeast and then north to south of Coleman. Damage was primarily to trees, but at least two homes had roof damage and a couple of outbuildings were damaged.				
BRYAN COUNTY --- MEAD [34.00, -96.51]				
	04/19/25 22:29 CST		0	Hail (1.75 in)
	04/19/25 22:29 CST		0	Source: Law Enforcement
Emergency management relayed the report.				
JOHNSTON COUNTY --- 0.7 NNW COLEMAN [34.28, -96.43]				
	04/19/25 22:30 CST		0	Hail (1.25 in)
	04/19/25 22:30 CST		0	Source: Public
The report was relayed through mPING.				
BRYAN COUNTY --- 4.1 SE SILO [34.00, -96.43]				
	04/19/25 22:31 CST		0	Hail (1.25 in)
	04/19/25 22:31 CST		0	Source: Emergency Manager
ATOKA COUNTY --- 4.0 ENE BOGGY DEPOT STATE PARK [34.35, -96.25], 4.7 W ATOKA [34.38, -96.21]				
	04/19/25 22:42 CST		0	Tornado (EF0, L: 3.30 mi , W: 300 yd)
	04/19/25 22:46 CST		0	Source: Emergency Manager
This tornado generally moved northeast. A church had roof and steeple damage and a at least four barns were damaged . Otherwise damage was primarily to trees.				
ATOKA COUNTY --- 3.8 NW TUSHKA [34.35, -96.22]				
	04/19/25 22:45 CST		0	Thunderstorm Wind (EG 70 kt)
	04/19/25 22:45 CST		0	Source: Emergency Manager
To the south of the tornado that affected areas west of Atoka , the thunderstorm also produced damaging winds that caused roof damage to a house and snapped a tree.				
COAL COUNTY --- 4.2 ESE LEHIGH [34.45, -96.15], 4.4 ESE LEHIGH [34.45, -96.15]				
	04/19/25 22:54 CST		75K	Tornado (EF1, L: 0.50 mi , W: 30 yd)
	04/19/25 22:55 CST		0	Source: Emergency Manager
The roof of a home was damaged, a shed destroyed and numerous trees were damaged just west of the Coal-Atoka County line near E1770 Road.				
LOVE COUNTY --- 1.4 W MARIETTA [33.94, -97.14]				
	04/20/25 00:24 CST		0	Tornado (EF0, L: 0.50 mi , W: 30 yd)
	04/20/25 00:24 CST		0	Source: NWS Storm Survey
A tornado briefly occurred west of Marietta. The only known damage was some tree damage just west of Marietta along State Highway 32.				
<p>A severe weather and flash flood episode occurred across central and southern portions of the WFO Norman Forecast Area from the evening of the 19th into the early morning hours of the 20th. A slow-moving upper system continued to approach the area on the 19th. This, along with strong/moist low-level ascent atop a quasi-stationary boundary, helped initiate widespread thunderstorms across the region mentioned above. Strong wind shear and instability, especially along and ahead of the surface boundary, promoted organized thunderstorms, producing hail, wind and tornadoes. A few strong tornadoes also occurred (near Courtney in Love County and Little City in Marshall County). This episode also observed the first fatal weak (F/EF0-1) tornado since 1988 across the WFO Norman Forecast Area. Flash flooding also became a concern by the late evening of the 19th, with two flood-related fatalities occurring in the city of Moore, as multiple vehicles were swept off of Eastern Avenue into a nearby creek.</p>				
JACKSON COUNTY --- 7.4 WNW ELDORADO [34.49, -99.78]

	04/24/25 22:30 CST		0	Source: Trained Spotter
Estimated wind gust. The report was relayed by emergency management.				
<p>A cluster of supercell thunderstorms developed along a modified surface boundary across northwestern Oklahoma during the evening of the 24th. While generally weak quasi-zonal flow fostered deep-layer wind shear magnitudes on the fringes for organized thunderstorms, very strong instability and enhanced vorticity along the surface boundary aided in rotating thunderstorms. Very large hail and a few tornadoes occurred with a pair of initially dominant supercell thunderstorms across Woodward and Woods County. Additional development occurred along the southwest flank of initial thunderstorms, with further reports of damaging winds occurring into the evening.</p>				
COMANCHE COUNTY --- 0.6 NNW CACHE [34.64, -98.63], 2.5 S CACHE [34.59, -98.63], 2.6 SSE CACHE [34.59, -98.62], 1.0 ENE CACHE [34.64, -98.62]

04/26/25 13:44 CST	0	Source: Storm Chaser

A storm chaser shared video of this tornado north of Bokchito . No damage was reported as the tornado did not appear to affect any structures , although some tree damage may have occurred. The path is based on detailed location and observational information provided by the storm chaser.

JOHNSTON COUNTY --- REAGAN [34.35, -96.72]

04/26/25 14:44 CST	0	Hail (0.88 in)
04/26/25 14:44 CST	0	Source: Emergency Manager

A slow-moving mesoscale convective vortex (MCV) produced severe weather and flash flooding during the morning and afternoon of the 26th. An initial complex of thunderstorms across southwestern Oklahoma and western-north Texas produced reports of thunderstorm wind damage and large hail, especially with a supercell thunderstorm that moved near the city of Lawton. Areas of persistent heavy rainfall also led to flash flooding across this area, with a flood-related fatality occurring in Lawton as a motorist drove into flooding beneath an underpass. By the afternoon, as the broader convective vortex moved eastward and instability developed, additional thunderstorms developed across southeastern Oklahoma. A few of these thunderstorms, exhibiting brief supercellular characteristics, produced hail and a tornado as they interacted with a remanent surface boundary across the area.

04/28/25 22:48 CST	0	Hail (0.75 in)
04/28/25 22:48 CST	0	Source: Public

The report was relayed through mPING.

Broad southwesterly upper-tropospheric flow comprised the south-central CONUS on the 28th. An embedded system instigated scattered thunderstorm development across the Red River Valley during the evening into overnight hours. With strong instability and sufficient wind shear in place, a mix of supercell and clustered storm modes occurred during this time, producing large to very large hail.

KAY COUNTY --- 3.5 WNW BLACKWELL [36.81, -97.34]

Relayed images showing significant flooding in the floodplain of the Canadian River along Rock Creek Road between 48th and 72 nd Avenue Northwest. Event time is approximate, and residual flooding may have occurred outside the listed time range.

Multiple rounds of severe convection and flooding occurred from the predawn hours of the 29th into morning hours of the 30th. The most significant round of severe thunderstorm activity occurred across portions of western-north Texas on the evening of the 29th, where intense supercell thunderstorms produced very large hail, damaging wind gusts and a pair of significant (EF-2+) tornadoes. Significant flash flooding became a concern into the morning of the 30th, after repeated rounds of heavy rainfall and thunderstorms,

WICHITA COUNTY --- 1.3 WSW (SPS)SHEPPARD AFB [33.98, -98.51]

04/02/25 04:53 CST	0	Hail (1.00 in)
04/02/25 04:53 CST	0	Source: Amateur Radio

A bi-modal (in time) severe weather episode occurred across Oklahoma and western-north Texas from the evening of the 1st into the early morning of the 2nd. An initial bout of activity featured scattered supercell thunderstorms across north-central Oklahoma and the Red River Valley. Persistent low stratus into the afternoon of the 1st led to a narrow warm sector by the early evening, with supercell thunderstorms displaying a slightly "elevated" character. These thunderstorms produced large hail before weakening quickly. As the main (strong) upper trough spread eastward into the early morning hours, additional thunderstorms developed along an advancing cold front. This linear band of thunderstorms produced only intermittent reports of large hail and wind damage despite a strongly sheared and unstable boundary layer.

ARCHER COUNTY --- HOLLIDAY [33.82, -98.69]

04/03/25 05:25 CST	0	Hail (1.00 in)
04/03/25 05:25 CST	0	Source: Emergency Manager

Event time is estimated from radar observations.

Strong low-level ascent atop a stalling surface boundary aided in the development of severe thunderstorms across western-north Texas and southern Oklahoma during the early morning hours of the 3rd. The strongest of these thunderstorms produced hail and thunderstorm wind damage.

WICHITA COUNTY --- 5.8 SSE PLEASANT VALLEY [33.86, -98.58]

04/04/25 02:56 CST	0	Thunderstorm Wind (MG 54 kt)

The report was relayed through mPING.

An intense thunderstorm moved from western-north Texas into southern and east-central Oklahoma during the early hours of the 5th. While the boundary layer was relatively stable during this time, due to a significant warm layer centered around 700 millibars/1 km, widespread and intense damaging winds were observed with this thunderstorm. Reports of large hail, and associated damage due to wind-driven hail, were also received.

CLAY COUNTY --- 4.4 WNW HENRIETTA [33.83, -98.27]

04/18/25 21:28 CST	0	Hail (0.75 in)
04/18/25 21:28 CST	0	Source: Public

The report was relayed through mPING.

An approaching upper system instigated scattered thunderstorm development during the late evening of the 18th. This development was most prominent along/near a quasi-stationary boundary, stretched along the Interstate 44 corridor during this time. Strong wind shear and instability promoted the development of a few organized thunderstorms, which produced large hail and caused wind damage.

CLAY COUNTY --- 4.3 SW BLUEGROVE [33.63, -98.29]

04/19/25 17:34 CST	0	Hail (0.88 in)
04/19/25 17:34 CST	0	Source: Trained Spotter

The report was relayed by amateur radio.

A severe weather and flash flood episode occurred across central and southern portions of the WFO Norman Forecast Area from the evening of the 19th into the early morning hours of the 20th. A slow-moving upper system continued to approach the area on the 19th. This, along with strong/moist low-level ascent atop a quasi-stationary boundary, helped initiate widespread thunderstorms across the region mentioned above. Strong wind shear and instability, especially along and ahead of the surface boundary, promoted organized thunderstorms, producing large hail across western-north Texas.

KNOX COUNTY --- 0.7 N BENJAMIN [33.59, -99.79]

04/22/25 22:55 CST	0	Thunderstorm Wind (MG 52 kt)

04/28/25 17:08 CST	0	Source: Broadcast Media

Broad southwesterly upper-tropospheric flow comprised the south-central CONUS on the 28th. An embedded system instigated scattered thunderstorm development across the Red River Valley during the evening into overnight hours. With strong instability and sufficient wind shear in place, a mix of supercell and clustered storm modes occurred during this time, producing large to very large hail and occasional thunderstorm wind damage.

Odell (ODEL) Mesonet observation.

Multiple rounds of severe convection and flooding occurred from the predawn hours of the 29th into morning hours of the 30th. The most significant round of severe thunderstorm activity occurred across portions of western-north Texas on the evening of the 29th, where intense supercell thunderstorms produced very large hail, damaging wind gusts and a pair of significant (EF-2+) tornadoes.
