Our rainy season got underway with the high-pressure ridge axis varying from north of the region to south which spread the rain out across the Florida peninsula. However, during the second week of the month, deep tropical moisture overspread much of the area leading to widespread heavy rainfall, especially across southwest Florida where [3-day rainfall totals exceeded 10 inches](#). Overall, for the month many areas from around the Interstate 4 corridor northward ended below normal (yellow/orange areas on Percent of Normal map), with well above normal (blue areas on Percent of Normal map) rainfall across southwest Florida.
