May and Spring 2023 Climate Summary for West Central and Southwest Florida

This May we saw temperatures pretty close to normal with averages generally running from about 1 degree below normal to 1 degree above normal. As for Spring 2023 (March/April/May) temperatures averaged about 1 to 4 degrees above normal across the region thanks to several days well above normal in March and early April as depicted by the orange bars in the picture below. This placed several locations in the Top Ten Warmest.

Observed Daily Max Temp vs Departure for Mar 01, 2023-May 31, 2023

Observed Daily Min Temp vs Departure for Mar 01, 2023-May 31, 2023

Tampa International Airport

Graphics Source: NOAA Regional Climate Centers

As for rainfall, March was very dry with less than 50 percent of normal rainfall across most of the region, with some areas near the coast seeing less than 10 percent of normal rainfall. April was not much better from around the Tampa Bay area northward along the Nature Coast while parts of the interior and Southwest Florida did see decent rainfall with some spots 200 to 300 percent of normal. As for May, the first half started rather dry, but during the third week an upper level trough combined with enough moisture and the sea breezes to bring much needed rainfall to most areas.
