June 2014 saw a number of organized, convective systems move through eastern Oklahoma. Although some widespread rainfall did occur across the region a few times during the month due to these thunderstorm events, much of the area, with the exception of far northeastern Oklahoma, received below average rainfall for the month. Extreme drought (D3) conditions improved to the severe drought (D2) category during June across Okfuskee, Washington, Nowata, and Craig Counties but remained across portions of Creek, Pawnee, and Osage Counties. Severe drought (D2) conditions also remained across portions of Rogers, Tulsa, Okmulgee, and Choctaw Counties. Monetary damage estimates resulting from the drought were not available.
