| <hr/> | | | | |
| A tornado developed northwest of Clifty, where it severely damaged three chicken houses and damaged a home. It moved east-northeast damaging an additional chicken house, several homes, and snapped trees along Highway 127. The tornado then damaged a mobile home, another chicken house, and trees as it crossed Highway 23. Based on this damage, maximum estimated wind in the tornado was 95 to 105 mph. | | | | |
| <hr/> | | | | |

Storm Data and Unusual Weather Phenomena - March 2015

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|----------|-----------|-------------------|---------------------|------------------------|
|----------|-----------|-------------------|---------------------|------------------------|

Severe thunderstorms developed during the afternoon hours to the east of a surface low pressure system located over southwestern Oklahoma and near a stationary frontal boundary that was draped across northeastern Oklahoma and northwestern Arkansas. Several of these storms developed supercell characteristics due to a very unstable air mass that was in place over the region coupled with strong vertical wind shear. These supercells produced a couple tornadoes, hail up to baseball size, and wind gusts to around 85 mph.

The storms evolved into a line during the evening hours and moved swiftly across northwestern and west central Arkansas, producing wind damage and hail to golfball size.

Locally heavy rainfall as a result of the storms moving repeatedly across the same locations produced localized flash flooding. A flash flood fatality occurred in Carroll County when a vehicle was driven into flood waters and was swept off the road.

OKLAHOMA, Eastern

(OK-Z054) OSAGE, (OK-Z055) WASHINGTON, (OK-Z059) PAWNEE, (OK-Z060) TULSA, (OK-Z064) CREEK

| | | |
|--------------------|---|---------|
| 03/01/15 00:00 CST | 0 | Drought |
| 03/31/15 23:59 CST | 0 | |

All of northeastern Oklahoma experienced below normal precipitation during the month of March. A large portion of the region only received between 10 and 50 percent of normal precipitation for the month. As a result, severe drought (D2) conditions continued across portions of Pawnee, Osage, Creek, and Tulsa Counties and expanded into portions of Washington County during March. Extreme drought (D3) conditions developed across portions of Pawnee and Osage Counties. Monetary damage estimates resulting from the drought were not available.

(OK-Z053) CHOCTAW, (OK-Z063) DELAWARE

| | | |
|--------------------|---|--------------|
| 03/04/15 06:00 CST | 0 | Winter Storm |
| 03/05/15 04:00 CST | 0 | |

A strong upper level disturbance translated into the Southern Plains on March 4th. Precipitation developed during the early morning hours across eastern Oklahoma ahead of this system and gradually changed over to wintry precipitation as the cold air deepened across the region. Light amounts of freezing rain and sleet fell over much of the area with some heavy sleet and snow occurring across portions of far eastern Oklahoma.

LE FLORE COUNTY --- 0.6 N SHADY PT [35.14, -94.67], 2.5 SSW TAHONA [35.14, -94.62], 1.6 N WILLIAMS [35.19, -94.55], 1.8 NE COAL CREEK [35.20, -94.65]

| | | |
|--------------------|---|---------------------------|
| 03/13/15 22:15 CST | 0 | Flood (due to Heavy Rain) |
| 03/15/15 23:45 CST | 0 | Source: River/Stream Gage |

The Poteau River near Panama rose above its flood stage of 29 feet at 11:15 pm CDT on March 13th. The river crested at 33.35 feet at 10:00 pm CDT on the 14th, resulting in moderate flooding. Agricultural land was flooded and several county roads were under water and closed due to flooding. The river fell below flood stage at 12:45 am CDT on the 16th.

A slow moving upper level storm system moved into eastern Oklahoma from the south and interacted with very moist air that was already in place across the area. Widespread heavy rainfall occurred across east central and southeastern Oklahoma with much of the area receiving between two and four inches of rain over a several day period of time. This widespread heavy rainfall resulted in moderate flooding of the Poteau River near Panama.

| This is the first segment of a three segment tornado. The tornado developed over Keystone Lake, west of Appalachia Bay Recreation Area. The beginning of this tornado was filmed by storm chasers. The tornado moved east-southeast across the lake waters and adjacent uninhabited land areas. Damage is strongly suspected to trees in this segment of the tornado but those suspected areas were not accessible by road. The tornado continued into Osage County, Oklahoma. | | | | |

| This is the second segment of a three segment tornado. The tornado crossed into Osage County over Keystone Lake and quickly crossed Highway 412. It then moved through a wooded area that was inaccessible by road. The first damage that was accessible by the survey team was at S 209 th W Avenue, where the tornado damaged a church, snapped large tree limbs, and damaged a home. It moved east- southeast toward W Archer Road snapping or uprooting trees and damaging homes. Based on this damage, maximum estimated wind in this segment of the tornado was 95 to 105 mph. The tornado continued into Tulsa County, Oklahoma. | | | | |

Storm Data and Unusual Weather Phenomena - March 2015

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|--|-----------|-------------------|---------------------|------------------------|
| <p>This is the third segment of a three segment tornado. The tornado moved into Tulsa County at W Archer Road to the east of S 209th W Avenue. The roofs of several homes were damaged and trees were uprooted as it crossed S 193rd W Avenue. The tornado moved southeast crossing Highway 412, where it snapped or uprooted numerous trees and blew a tractor trailer off the road. A doughnut shop was destroyed at S 177th W Avenue, homes were damaged, and trees and poles were snapped. It crossed the Arkansas River and moved through the River Oaks Estates Mobile Home Park where it destroyed 58 mobile homes and two permanent homes. One fatality and about 30 injuries occurred in this park. The tornado crossed the Arkansas River again as it moved east-southeast toward Sand Springs, uprooting numerous trees before dissipating on the south side of Sand Springs, south of Highway 412 and just west of Highway 97. Based on this damage, maximum estimated wind in this segment of the tornado was 125 to 135 mph.</p> | | | | |

Direct Fatalities: M41MH

Strong thunderstorm wind blowing from the north to south damaged numerous homes, snapped or uprooted numerous trees, and blew down power poles. A building had the north-facing wall blown in and the roof above it collapsed. Seventy-five young girls were in the building at the time and sheltered in the basement just before the storm severely damaged the building. No injuries resulted from this damage.

| <p>This tornado developed in an undeveloped area south of the Tulsa International Airport and moved southeast toward Admiral Blvd . The tornado damaged several mobile homes, a number of permanent homes, and snapped large tree limbs north of I-244. Numerous homes, a number of mobile homes, a strip mall, an apartment complex, and businesses were damaged south of I-244 and west of Highway 169. The tornado continued southeast as it crossed Highway 169 at and south of Admiral Blvd., damaging the roofs of numerous homes and snapping many large tree limbs. A carport was destroyed and a garage door of a home was blown inward as the tornado turned more southerly before dissipating near E 11th Street South, just west of Garnett Road. Based on this damage, maximum estimated wind in the tornado was 70 to 80 mph.</p> | | | | |

A vehicle with two occupants was driven into a flooded low water crossing where an estimated 1 to 1.25 inches of rain had fallen over the previous few hours. The vehicle was washed off the road and the occupants died in the flood waters .

Direct Fatalities: F63VE, M59VE

Severe thunderstorms developed during the afternoon hours to the east of a surface low pressure system located over southwestern Oklahoma and near a stationary frontal boundary that was draped across northeastern Oklahoma. Several of these storms developed supercell characteristics due to a very unstable air mass that was in place over the region coupled with strong vertical wind shear. These supercells produced several tornadoes, including a strong tornado that resulted in a fatality in Sand Springs. The storms also produced hail up to softball size and wind gusts to around 90 mph.

The storms evolved into a line during the evening hours and moved swiftly across eastern Oklahoma producing wind damage and hail to golfball size.

Locally heavy rainfall as a result of storms moving repeatedly across the same locations resulted in flash flooding. Two flash flood fatalities occurred in Muskogee County when a vehicle was driven into flood waters and was swept off the road.
